American Railroad Journal.

Saturday, August 22, 1863.

Schenectady and Catskill Railroad.

Books of subscription to the capital stock of the Schenectady and Catskill railroad are now open at the office of H. G. Stebbins and Sons, No. 46 Exchange Place, N. Y.

Stock Exchange and Money Market.

The predominant features of the Money Market and Stock Exchange since our last issue, are a plethoric supply of money and a great rise in railway shares. It is well understood that fortunes have been made rapidly in Wall street the last few months, but those who have lost as largely, keep their misfortunes to themselves. We have heard of one instance which we dare say is a sample of a majority of cases, where a gentleman from Long Island ventured into the street, and upon a hypothesis of his own, made $75,000 in a few weeks and realized it. But he then thought the tables would turn, and he could safely reverse

his system of speculating. He proceeded accordingly, and in a very short time lost the whole of his $75,000, and attends to his former business with a pleasure he did not find in Wall or William street.

Money has been obtained as at low a rate as 4½ to 5 per cent., but this is on first class commercial paper; few good borrowers pay over 5 per cent., and the general opinion is, that a much higher rate cannot be obtained while the war continues. Gold is down to about 124 and a fraction, being no longer a favorite as a basis of speculation. In fact it is in some disfavor just now, and even the Government has returned its loans in that commodity, and receives enough on its own account to meet its engagements of interest.

The excitement in the stock market has almost rivalled that of May last. Buyers seemed perfectly infatuated. Erie on Wednesday after a slight decline mounted up to 118¾ and seems destined to go higher, since its friends assert that its profits are now fully 18 per cent. net, and dividends are certain to continue. Central improved, and Harlem has been moving in a curve, from 167 to 158, then up to 170, and then down again to 158. To understand all these deviations from a straight and permanent line of value, requires the skill of the best engineers in the street, and a base of capital to the extent of millions. No small operators can venture in Harlem except under the penalty of being swallowed up by the Leviathans.

Similar advances though not on so large a scale took place in Galena, Rock Island, Chicago and Alton, Illinois Central, Fort Wayne and others, the quotations of which will be found in our appropriate columns.

Exchange drooped, and stands at about 38 sterling, and 4.10 for francs. Sellers are waiting for definitive news from Charleston to know whether it is to fall still further or not.

The subscriptions to the 5-20's are not as large as they were, falling off on Tuesday to $400,000 for that day, and as this may continue, it is announced, with what authority we do not know, that a new issue of legal tender notes, bearing a small interest, which, while it will not impair their circulation, will yet induce their gradual withdrawal from the general volume of the currency, instead of inflating it as has been feared. Beyond all question we have had but little inflation as yet, notwithstanding the predictions of the bullionists. In the JOURNAL of last week, we published the proofs of this fact in the extracts we made from the admirable pamphlet of Dr. Elder, which by-the-by, should be reprinted and sent to all the leading bankers in Europe. The *Journal of Commerce*, a very conservative paper, and in the interest of the hard-money theorists, has recently published a statement of the prices of certain articles of domestic produce on the 1st of August for the last five years, and it fully bears out the assertion which we have again and again made in these our articles, that a paper money inflation of prices had not yet occurred, at least in the loyal States. The tariff and the taxes on manufactures, and on trading licenses has put up prices on those articles which come within the scope of the internal revenue laws, or were subjects of importation, but in articles where production was unshackled, the rise is absolutely nothing. This will appear from the following table:

PRICES OF	1859.	1860.	1861.	1862.	1863.
BREADSTUFFS –					
Flour, stand, sup. bbl.	$4 90	$5 10	$4 05	$4 90	$4 37

Whiskey, gallon	25½	21	16¾	31	45

Real estate has not advanced but rather fallen in price, and this is in direct contradiction of what was observed in the Confederate states, where houses and lands brought enormous prices in confederate money. We have therefore a demonstration of the problem, whether we have issued more paper than could flow easily into and out of the channels of business, and find we have not done so as yet. On the contrary the well known enterprise and industry of our people have been stimulated by this new capital placed in their hands, and the actual producing power of the country is increasing at a rate which defies computation. As soon to as this war is over, the restored markets of the South and South West will call for all our surplus products to the extent of hundreds of millions of dollars, which cannot be obtained so cheaply from any other quarter of the world. We are not likely to lose a dollar by over production. Our foreign trade continues satisfactory and its diminution, form previous years ascertained at the Treasury is not more than 10 per cent. if that, than it was before the rebellion broke out and Cotton was King. Our domestic exports actually far exceeded in the past year fifty-two millions, nearly double those of the previous year, *and paper money has done this*, for which we have received full value.

Numerous Banks are going into operation on the plan of Mr. Chase, and we do not see how they can avoid taking away the business of the other banks in a large degree. Their currency will pass where that of the local Banks will not; local discounts on bills will be avoided entirely, and we shall have what we never before had, a uniform currency. This is one of the greatest blessings of a good Government, and we are about to obtain it by the force of necessity rather than the wisdom of financiers.

Foreign affairs just now wear a favorable aspect for us. It would seem that Russia repels all intervention, and while willing to modify her institutions to favor Poland, will not treat on any basis of National independence. However, our sympathies may lean towards the Poles, for the sake of Kosciusko and Pulaski, who served in our revolutionary armies, we must not forget that they are not asking for a republic, but only that their own kings and nobles may rule them, and this is a question we are in no way called on to take sides in. A war in Europe is highly probable, which cuts the Gordian knot for us, and insures the good behavior of both France and England towards the United States.

We then look forward hopefully to our future and believe that we shall again be a united people, and nowhere find better friends of the country and its time honored institutions, than in the Southern States, where a majority of the people always opposed the rebellion, and were dragged into it by the fear of death and the loss of their possessions; by a cabal who fenced in their authority by violence and men in arms.

The Salem and Lowell Railroad Company have declared a dividend of 75 cents per share, payable on demand.

The following quotations of sales of Railway and other securities are in addition to those given elsewhere in our columns:—

New York.—Central New Jersey, 165; Rome and Watertown, 90; Illinois Central full stock, 111@115; do., cancelled bonds scrip, 100@103; Miss. and Mo., 30; do., L. G. bonds, 58; Ohio and Miss. certificates, 34.

Philadelphia.—City 6s, 1884, 102½; do., 1874, 103; do., 1888, 103¼; do., 1892, 103¾; Camden and Atlantic pref., 20@19½; Morris Canal 2d mort., 104; Wyoming Canal bonds, 94. The latest quotations are: City 6s int. off, 102½@103¼; do., new, do., 106¼@106½; State 5s, 100@100½; Reading, 59⅝@59¾; do., 6s, 1843–'80, 107; do., 1870, 106; do., 1886, 118@118½; Camden and Amboy, 164@165; Pennsylvania R. Important to Contractors.

The Board of Public Works of Chicago invite Proposals, until the 9th of September, next, for the construction of a brick tunnel under Lake Michigan, two miles in length, from the present Pumping Works in that city, to extend under the bed of the lake, for the purpose of obtaining pure and wholesome water. It is found that this bed is suitable for the work, as it consists of stiff blue clay, which greatly favors the contractors. We hope that this JOURNAL, by calling the attention of its readers to the subject, will be the means of securing prompt and satisfactory proposals from some of the eminent engineers, who habitually peruse our columns.

Finances of Connecticut.

The payment into the Treasury of the State of Connecticut from all sources during the past six months have been for January, $1,762,360 21; February, $508,917; March, $381,041 56; April, $545,155 39; May, $53,353 21; June, $99,855 03; July, $1,905,173 58; making the total receipts, $5,255,855 98 during the first half of the present year, with a balance of cash in hand to the amount of $391,248 60. The total amount of the indebtedness of the State on the 1st of August, 1863, consists in the issue of the State bonds to the amount of $4,000,000. From this is to be deducted, bonds of the United States, in possession, $378,000; adjusted claims against the United States, $1,234,000; unadjusted claims against the government, $240,000; leaving a net indebtedness of only $148,000.

American Improvements Adopted on a French Railway.

It is rather a singular circumstance, that the American car has not been generally used on the European railways. From the following it appears, that the Eastern Railway in France has at last adopted our system in part at least.

"A trial is being made on the Eastern Railway, France, of some new carriages, which will, it is expected, remedy many inconveniences long complained of. A passage in the centre, communicating from one compartment to another, enables the railway officials to see what is going on in the course of the journey, and allows the passengers to freely move about from one end of the carriage to the other. A platform or balcony for smokers is placed at one end. Ventilators are also fixed, which can be opened or shut at pleasure, so as to give a supply of fresh air. The new plan appears to present the following advantages:—security, facilities for smoking without annoyance to any one, and exemption from danger of fire, as the carriage is constructed of sheet iron."

Valuation of Newburyport.

The whole valuation of real estate is $3,048,700; personal property, $3,395,000; total valuation, $6,443,700; being $224,250 more than in 1862, and $154,400 less than in 1861. The tax to be raised this year is $94,913 40, assessed upon 2348 polls, is 114 less than the number last year, and 82 less than the year preceding. The ratio of tax is $14 on $1000.

The London Quarterlies.

We have received from Leonard Scott & Co., 38 Walker street the Edinburgh and Westminster for July.

We always find in these reviews something relevant to the subjects which engage the attention of the AMERICAN RAILROAD JOURNAL, and so we can recommend to our Architect subscribers the excellent article on "the modern styles of Architecture" which is to be found in this number of the Edinburgh.

Oil Creek Railroad.

The Ravenna *Democrat* says that upon the 1st of August Benjamin J. Wells, of Ravenna, retired from the position of Assistant Superintendent of the A. & G. W. R. R. to assume the position and duties of Superintendent of the Oil Creek Railroad, running from Corry, on the A. & G. W. R. R., to Titusville, 28 miles. Dr. W. S. Streator, of East Cleveland, is the principle owner of the road, and Mr. Wells was the early master-spirit of the enterprise. For its length, this road is doing a greater business than any road in the United States, and its revenue is almost fabulous. The road is to be extended ten miles further during the season, and will thus form an outlet for all the great oil wells of Pennsylvania.

☞ A new and improved turntable, the patent of Wm. Sellers & Co., Philadelphia, is being placed in the engine house of the Western Railroad Co., at Springfield. It will be so adjusted in the centre that it will be easy for one man to turn an engine about by merely pushing one end of it.

☞ The Rockville Branch railroad, extending from Kenon, on the Hartford and Providence railroad, to Rockville, was completed on the 10th inst. The road is 4½ miles long. It was built by M. H. Griffin of Middletown, and M. A. Clyde of Springfield. Its cost was about $145,000. Mr. Allyn Hammond is President, and Mr. E. P. Preston, Secretary.

☞ The Troy *Post* says that the travel on the New York Central Railroad is immense—indeed it was never so great before. The passengers include all classes. While the business travel is large, the pleasure travel is even larger.

☞ The President of the St. Paul and Pacific Railroad Company has purchased, in England, 45,000 tons of iron, 15,000 of which have arrived in New York, and the remainder is in transit. A new locomotive is *en route* from Philadelphia, and nothing now but low water will prevent the completion of that railroad by January next, over eighty miles north of St. Paul.

☞ The several railroad companies constituting the line between Washington and New York, are engaged in the redemption of their promises made last winter, for the construction of a double track along the entire line. The double track between Trenton and New York will soon be completed, and a large force is at work between Trenton and Philadelphia. From the latter city, southward, the track is complete to Newark, and will be speedily finished between Baltimore and Washington. Work is progressing upon the bridge across the Susquehanna, and there is a prospect that a double track road, without any change of cars, will soon be provided between Washington and New York.

Erie and Ontario Railway.

The corporation of the town of Niagara sold the plant and rolling stock of the Erie and Ontario Railway to Mr. W. A. Thomson yesterday. The necessary papers were handed over, and the first instalment paid; it is intended, at the ensuing session of Parliament, to apply for the necessary legislation for the construction of the proposed works, from Niagara to Fort Erie. It is contemplated that the entire works will be completed by the first of October next. Everything will be done to make this road one of the best on the continent.—*Toronto Globe, August 11th.*

☞ The Chicago *Tribune* says: "We learn that the English friends of James Robb, President of the Chicago and Alton Railroad Company last night presented him with an elegant service of gold plate, manufactured in London, and brought across the Atlantic by a special committee of English gentlemen. Some idea of the value of the service can be gained from the fact that the amount paid for duties alone exceeds $1,100. It is in every respect an elegant present, and most worthily bestowed."

The White Mountains.

Those who contemplate visiting Lake Winnipisseogee and the mountains will do well to take the route laid out by Mr. Prescott of the Eastern Railroad. A train leaves this city daily, Sundays excepted, at 12.15 P. M., for Alton Bay, where it connects with the steamer Dover for Wolfborough and Centre Harbor, and at those places with stages for the mountains. This route traverses the entire length of the lake, thus relieving the traveler by a pleasant trip on the boat, after his journey on the cars. There is no change of cars between Boston and the lake, and baggage is checked through to Wolfborough and Centre Harbor. The superintendent of the Eastern road is energetic and efficient in his measures for the comfort and safety of the patrons of the road, and by his unfailing courtesy adds much to its popularity.—*Boston Commercial Bulletin.*

☞ The Adrian *Watchtower* says that Col. Robt. E. Ricker is spoken of as the new Superintendent of the Michigan Southern Railroad. Col. Ricker is the engineer who constructed the Detroit, Monroe and Toledo Branch road, and is now Superintendent of the Terre Haute and Richmond railroad.

Wire for Pacific Telegraph.

We understand that 1,200 miles of telegraph wire, for the projected line across the continent, will be brought to this country during the season of the navigation. Another portion will go round by the Isthmus, to commence from the Pacific side. We believe it is intended to have stations every 30 miles. We have no doubt this line will soon be a *fait accompli*, and telegraphic communication with China be by way of Canada and the Red River.—*Montreal Gazette.*

Public Debt of Russia.

The Russian public debt bearing interest amounted, on the first of January, 1863, to 975,734,691 roubles. The interest, sinking fund, agio and banking expenses will, during the current year, absorb 57,487,218 roubles, against 54,296,188 in 1862. The Russian debt bearing interest is as follows: 95,577,000 Dutch florins, 30,590,000 pounds sterling and 751,700,000 roubles.

The latter amount includes 138,000,000 of Treasury bonds, bearing interest at 4 32-100 per cent.; 38,640,000 roubles from the bank at 4 per cent., and 149,431,822 roubles from the bank at 5 per cent. interest. The remainder consists of different loans. To the 975,734,691 roubles bearing interest must be added a floating debt of 699,600,822 paper roubles, a sort of assignat, circulating without interest.

Railroad Bridges.

Messrs. Quigley and Burton, Philadelphia, have just completed an iron bridge, on the Lehigh Valley, Railroad, below this place, of the Murphy patent. The bridge consists of four spans, three of which are of 115 feet span, and one of 141 feet, and arranged for a double track. It is proportioned to carry 3,000 pounds per lineal foot per track. This bridge replaces the one carried away by the freshet last year. The same firm are also building a bridge at the Turnhole, about three miles above Mauch Chunk, of the same design. It consists of two spans of 127 feet each. It will be completed in a short time, and will replace the famous iron bridge constructed some six years ago by this company, and which was carried away by the freshet of 1862.—*Carbon Democrat.*

The Commerce and Commercial Policy of Brazil.

A special meeting of the government of the Board of Trade of Boston was held at their rooms in the Merchant's Exchange Building on the 31st inst., to hear a statement from Rev. James C. Fletcher, the eminent South American traveler, relative to the Commerce and present Commercial Policy of Brazil. Charles G. Noyes, Esq., one of the Vice Presidents of the Board of Trade, occupied the chair. By invitation of the chairman, Hon. Archibald Foster, Brazilian Counsel, occupied a seat upon the platform. Mr. Fletcher was introduced shortly after the meeting opened, and gave a very interesting address, of which the following is an epitome:

Mr. Fletcher remarked that he was more accustomed to the pulpit than to Boards of Trade, and if he was not so familiar with the language of Mercury as that of Zion, all due pardon would be extended; but he felt that religion and commerce were hand-maidens, and he could speak without scruples on a subject which concerned the vital interests of two great countries. He was there, not that he had any personal or private interests to serve, but he wished, as some of the most liberal and important propositions had been made by Hon. Tavares Bastos in the Brazilian Parliament, that an expression of hearty sympathy might go out from this community to encourage those who, with the Senor Bastos, were endeavoring to link the United States and Brazil by lines of steamships and by closer ties of amity.

The wealth of nations until 1815, since which coal and iron have played such an important part, had been increased mostly by dealing in the productions of the tropics. Those productions were either in large quantities, cheap in price, and must be used by all people, or were in small, compact forms of great value, and consequently high priced. Coffee, sugar, cotton, India rubber, etc., all must use. Medicines, drugs, precious stones, &c., &c., were concentrated forms of wealth, mostly from the tropics. Now Brazil greatly abounds in the cheap, plentiful commodities, and in the concentrated forms of riches; for the trade in diamonds was as regular from Bahia as gold from California, and the nation that could by its exchanges of manufactured goods and bread stuffs command this commerce, would be, by proper management, on the highway to prosperity. How was it with the United States? In 1857 we exported to Brazil $5,500,000, and she sold to us $21,500,000 of her products. In 1860, we sold to Brazil the amount of $6,000,000, and she returned to us $22,000,000 of her coffee, India rubber, rosewood drugs, &c. In four years' trade we sold Brazil, mostly in breadstuffs, $21,000,000, and she disposed of to us, as her customers, $78,000,000! The balance of trade is terrifically against us. During the same years England annually made her profit of $10,000,000. France reaped her millions, Germany (principally Hamburg and Bremen) gained large sums, and even worn out old Spain and Portugal did not run behind hand.

Why was this? In 1862 we sold Brazil as much she sold us, and our mutual trade was increased. Since 1850 our export trade to Brazil has not augmented a million, but England's trade has strided at enormous paces. But between 1840 and 1850 the commerce of Great Britain had not increased a dollar. In that period we had clipper vessels that brought Brazil nearer to us than she was to England. Our fleet sailors carried out swift letters and samples, and brought back swift orders. Boston and Salem then did the largest business with the Amazon, where to-day they do not send a vessel. But in 1850 England subsidized a line of steamers to Rio de Janeiro. *In five years her trade with Brazil increased two hundred and twenty-five per cent.*, and just so long as Great Britain, France and Portugal have that supremacy, just so long will trade languish between Brazil and the United States. Mr. Foster the Brazilian Consul for this city, here present, had informed him that Boston, until this year, (when kerosene oil had galvanized the trade a little,) had not one quarter the commerce she formerly enjoyed with the empire in question. And speaking of kerosene, Mr. F. launched out into some important observations on the Amazon and its capabilities. He had seen kerosene lighting the houses of Manaos and Tabatinga out there, 1000 and 2000 miles up the mighty river.

He spoke of the vast water flood of that valley; of sea-going steamers of large capacity floating with perfect ease within the boundaries of Peru; of the fertility of a soil which can produce sugar, coffee, cotton, Indian corn, &c., &c., in abundance. This vast region had been shut up by old Portuguese prejudice, which was so restrictive to trade and to all liberal policy. But a new era had dawned upon Brazil; new men had come upon the stage of action. The old men, who had retained many of the feelings of their Portuguese ancestors, were passing away. The Emperor, Don Pedro II, whom the London *Saturday Review* had pronounced the most enlightened monarch in the world, was born since Brazil achieved her independence. Many influential statesmen of Brazil, born since 1822, and educated in the law schools of Pernambuco and San Paulo, are men of liberal ideas, and they are diffusing such principles as will be for the welfare of their native land. One of them has proposed a closer alliance with the United States. Others have supported him and his propositions to subsidize a steamship line, and to open the Amazon to the flags of all nations only failed to become a law by six votes.

On the Pacific coast of South America William Wheelwright of Newburyport and the Alsops of Middletown, Ct., had possessed great influence in the United States commerce and for the development of the Hispano-American countries. But although we had noble men like Swift of Pernambuco, Gillmer of Bahia, the Wrights, Davises and others of Rio, yet we have had no men to bring us closer to Brazil. Dr. Rainy, the successful introducer of American steam ferry boats on the bay of Rio de Janeiro, endeavored to enlist our own Congress in a steam line to Brazil, but Congress had politics to attend to. Now it comes about that Brazilian gentleman there, with a far-seeing policy, are determined to do for themselves and for us. Hon. Tavares Bastos is a young man who has studied the resources of both countries, and with eloquence (as Mr. Fletcher showed by extracts from a letter written by Bastos to Geo. N. Davis, formerly of this city) has urged the opening of the Amazon and to establish a steamship company among citizens of the United States, to be subsidized by the Brazilian government. [This offer, it was stated to the board by Hon. Ed. S. Tobey, is the most generous ever made in the history of nations.]

The Baron of Maua, the great financier, promoter of railways in Brazil, and the head of the Amazon Steam Navigation Company, a most liberal minded and enlarged man, has been heard to say that for the Amazon region and Brazil in general the cementing of the United States and Brazil by steam navigation, is one of the most important questions for South America. Senor Sinimbu, the minister of public works, a gentleman of great experience and intelligence, spoke for the Government last session, and for the first time it has been conceded, by an official of high standing, that the opening of the Amazon "is only a question of time." It will be brought up at future sessions.

The Brazilian liberality toward us in this matter, Mr. F. contended, should be met with a corresponding spirit, and he hoped that this Board and similar associations would give a hearty expression of sympathy when the time came to cooperate. With kindred observations, which elicited the closest attention of the audience, Mr. Fletcher closed his remarks. But so remarkable is the printed letter of Hon. Tavares Bastos in the *Corcio Mercantil*, written, our readers well remember, for the Brazilians, that we deem it proper to give one extract:

"Commerce between the two countries is constantly increasing. In 1859 we imported from the United States to the amount $6,000,000, and we exported to the United States $22,000,000. Now who is the most directly interested in the closer relations of which I have spoken? Without doubt Brazil, and above all the planters and dealers in coffee, and the collectors and merchants of the India rubber of the Amazon valley. If the sum total of transactions in the normal annual period, and without the aid of steam, is $28,000,000, is not the advantage of a steamship line between New York and Rio evident to all?

No one can foresee the increase of importation from the United States when there shall be the great convenience of steam communication with New York. To-day no one ignores that Americans begin to take the lead in our markets in certain articles which they compete with and surpass the English. The United States furnish us with breadstuffs. You have even imported for us Indian corn in years of scarcity. Many articles of furniture and of wooden ware we buy by preference of the Americans. Yes, even in the mountains, whence I write this letter, I have seen many household comforts which we call American. The Pedro II Railway Company have formed so good an opinion of your foundries and machine shops, that they now prefer American locomotives (Baldwin of Philadelphia) and American cars (Wasson, Springfield, Massachusetts). The English, who almost monopolize our market in cotten and woolen fabrics, send to Brazil articles of a high price and inferior quality, hitherto without competition. Would that American manufactures would obtain information of this great market, and by studying near at hand the wants and tastes of 9,000,000 of people, I have no doubt that in a short time they would be strong competitors of the English. Who would profit by this competition? Undoubtedly the Brazilians."

Hon. Edward S. Tobey rose at the conclusion of Mr. Fletcher's remarks, and after commending in the warmest manner the address just delivered, moved the adoption of the following resolutions:

Resolved, That in view of the growing commerce between the United States and Brazil, we deem it

for the highest interest of both countries to have direct steam communication, instead of being, for passengers, mails, &c., subject to the uncertainty of sailing vessels, or dependent upon the long and indirect steam route *via* England, France and Portugal.

Resolved, That we appreciate the endeavors of the Hon. A. C. Tavares Bastos and his coadjutors, who last year, in the Brazilian Chamber of Deputies, brought forward two liberal propositions—first to open the Amazon and its tributaries, and so much of the La Plata and its affluents, as are within the Empire, to the flags of all nations, and thus attracting to those fertile valleys (so capable of producing cotton, coffee, sugar and other staples) emigration necessary to the development of Brazil; and second, that the Brazilian government shall subsidize an American steamship line from the United States to Rio de Janeiro, touching at Para and Pernambuco.

Resolved, That we recognize in these propositions, and in the large vote in their favor, (wanting but six to make them laws,) a spirit of liberality and enlarged views that demand perseverance on the part of their projectors in Brazil, with cordial co-operation by the United States.

Resolved, That under the constitutional rule of the enlightened Emperor of Brazil, Don Pedro II, we rejoice to see progress in the Empire; that we appreciate the arduous efforts of the Baron of Mowan; of his Majesty's Counsellor, Senor C. Ottoni; and of Senor Sinimbre, the Brazilian Minister of Public Works, believing that these distinguished gentlemen have done much to cement the two leading nations of the Western continent.

Remarks were made in favor of the resolves by Mr. Tobey, Mr. Joseph S. Fay and A. Foster, severally in earnest advocacy of the plan contemplated therein.

On motion of Mr. Edward Whitney it was voted that the thanks of the government of the Board of Trade be presented to Rev. J. C. Fletcher for the interesting and instructive address this day given before them.

Public Debt of Missouri.

The public debt of Missouri, on the 1st of Jan'y last, as given in the Report of the Auditor, is as follows:

State bonds proper*	$602,000
Revenue bonds	431,000
Railroad bonds issue	23,800,000
Defense warrants	1,246,000
School fund borrowed by State	900,000
Bills payable to sundry banks	1,278,000
Total	$38,257,000

* The interest upon $99,000 of these bonds has been paid up to Jan. 1, 1863.

Included in the above is the debt incurred for railway encouragement, secured by a first mortgage lien upon the roads and their equipment, viz:

To roads not now paying the interest upon the bonds of the State	$20,800,000
To Hannibal and St. Joseph Co.	3,000,000
Total	$23,800,000

The unpaid interest, for which the State is bound, upon the first sum now amounts to 15 per per cent., and is included in the market price of Missouri 6s as called at the Stock Exchange. The amount of the legitimate, or loyal floating debt incurred by the State since the beginning of the war, and mainly for war purposes, as given above, is as follows:

On revenue bonds	$431,000
Of the State school fund	900,000
On Defence warrants	1,246,000
And of the State Banks	1,278,000
Together	$3,855,000

The following statement of the amount of State credit loaned the various railroads, and other indebtedness of the State, was obtained from the Auditor of the State of Missouri on the 10th of December, 1862:

	Act.	Amount.	Am't of State bonds issued.
Pacific R. R.:			
Approved	Feb. 22, 1851	$2,000,000	
"	Dec. 25, 1852	1,000,000	
"	Dec. 10, 1855	1,000,000	
"	Dec. 10, 1855	2,000,000	
"	Mar. 3, 1857	1,000,000	$7,000,000
Pacific R. R. Southwest Branch:			
Approved	Dec. 10, 1855 }	4,500,000	4,500,000
"	Mar. 3, 1857 }		

Total amount granted to and drawn by the Pacific Railroad, $11,500,000 at six per cent., the annual interest is $690,000.

2,093 bonds of the issue to the Southwest Branch bear six per cent. interest and the balance, 1139, are guarantied by the State and bear 7 per cent. interest.

Hannibal and St. Joseph R. R.:			
Approved	Feb. 22, 1851	$1,500,000	
"	Dec. 10, 1855	1,500,000	$3,000,000

Total amount issued and drawn, $3,000,000.

North Missouri R. R.:			
Approved	Dec. 23, 1852	$2,000,000	$1,950,000
"	Dec. 10, 1855	2,000,000	2,000,000
"	Mar. 3, 1857	1,500,000	400,000

The total amount granted to this Company was $5,500,000. It failed to pay interest before the total amount was drawn, and consequently drew only $4,350,000, leaving $1,150,000 of the amount granted undrawn which the State still holds. The amount of interest annually due is $261,000.

St. Louis and Iron Mountain Railroad:			
Approved	Feb. 23, 1853	$750,000	$750,000
"	Mar. 3, 1855	750,000	750,000
"	Dec. 10, 1855	1,500,000	1,500,000
"	Mar. 3, 1857	600,000	276,000
"	Mar. 9, 1859	.....	324,000

Total amount granted this road and drawn is $3,600,000.

Cairo and Fulton R. R.:			
Approved	Dec. 11, 1855	$250,000	
"	Mar. 3, 1857	400,000	$650,000

Total amount granted and drawn, $650,000.

Platte County R. R.:			
Approved	Mar. 3, 1857	$700,000	$700,000

Revenue Bonds:

For relief of Bank of Missouri and others, March 18, 1861 ..... $431,000

$23,800,000 of bonds issued to the various railroad companies, leaving of authorized issue yet to be issued $1,150,000, which belongs to the North Missouri Railroad Company. These 431 bonds are dated June 1, 1861, and are due three and five years after date, drawing nine per cent. interest. They were issued to take up Revenue bonds which fell due on June 1, 1861.

Toledo and Wabash Railroad.

The improvements now in progress by the Toledo and Wabash Railway Company are of a very extensive character, and prove that President Boody and his assistants are determined to place their road in a condition equal in every respect to any in the West.

As stated some time since, the work of ballasting the track between this city and Fort Wayne, is going forward with commendable zeal, and we hear from those who frequently pass over the road, that along the entire line great activity is apparent in every department.

Two new passenger locomotives have, within a few weeks, been put upon the road—making twenty-one passenger engines owned by the company, all from the best manufactories in the country—in a word, the entire rolling stock of the road is of the very best character. The company have heretofore relied, to a considerable extent, upon outside parties for their rolling stock, but in a short time their facilities at this city and Fort Wayne will be such that they can manufacture all the stock they require at a great saving on former prices.—*Toledo Blade.*

Baltimore City Passenger Railway.

With the close of the first fiscal year of the Baltimore City Passenger Railway Company, the Board of Directors present to the stockholders the annual report:

The capital stock of the Company consists of forty thousand shares, upon which sixteen dollars and seventy-five cents per share have been paid. It is liable to calls for further instalments to the amount of eight dollars and twenty-five cents per share, the capital being limited by the charter to one million of dollars.

By the act of incorporation under which the Company is now operating it became a continuation of the Baltimore City Passenger Railway Association, being possessed of their property, responsible for their liabilities, and invested with their rights and privileges, each share of the stock of the Company representing one share of scrip of the Association.

The revenue for the year ending June 30, 1863, was as follows:

From passengers		$236,585 74
Sale of old materials		908 04
" manure		1,765 57
		$239,059 35

Expenses, viz:

General expenses	$162,975 09	
Park tax	47,277 15	
Maintenance of horses	8,902 62	
Total	$219,154 86	
Less materials on hand	1,153 40	
		$218,001 46
Net earnings		$21,057 89

Of this sum there has been appropriated:

To reduction of indebtedness	$11,469 24
" payment of interest	2,262 78
" increase of horses	1,151 26
" payment expenses last year	1,584 71
Cash on hand June 30, 1863	4,589 90
	$21,057 89

The liabilities are $31,549 59, and the assets $28,742 55.

The North Baltimore line has been constructed and fully equipped during the year, at a cost of $28,723 31.

Twelve one-horse cars have also been provided for the Pennsylvania avenue and South Baltimore line; two for the Broadway and Madison avenue line, for use at the end of Madison avenue in the winter; and three for the Canton line.

The total amount expended for construction during the year was $39,268 41.

After three months' experience with one horse cars upon the North Baltimore, and the Pennsylvania avenue and South Baltimore lines, it is conclusively demonstrated that they are fully adequate to perform the service here required, and are operated at three-sevenths less expense than two-horse cars.

The general prostration of business and the high price of horse feed and materials have operated much against favorable results during the past year.

Average No. of horses in stables during the year	340
Average No. of cars run daily (2 horse)	50
Cost of horse feed per day	40 cts.
Average distance traveled by each horse in one day	19 miles.
Total number miles run by cars during the year	1,002,176
Total number passengers carried during the year	5,909,642

Being rather less than six passengers for each mile run.

By order of the Board,

HENRY TYSON, President.

British Board of Trade Returns.

The British Board of Taade returns for the first four months of 1863, show the following results compared with the similar periods of 1861 and 1862 :—

EXPORTS TO FOREIGN COUNTRIES, JANUARY 1 TO APRIL 30.

4 mos. 1861..	£35,574,462..	equal to	$172,536,000
4 mos. 1862..	36,246,651..	equal to	175,796,000
4 mos. 1863..	39,458,381..	equal to	191,373,000
Total.....			$539,705,000

Or an average (at $4.85 per £) of about one hundred and eighty millions of dollars for four months.

The proportion of export trade to the United States during the three years is not seriously diminished. In thirty-seven enumerated articles of export to the United States for the four months of 1861-2-3, the exports are larger now than in 1861, viz :

EXPORTS TO THE UNITED STATES—FOUR MONTHS.

Four months	1861.....	£4,129,729
" "	1862.....	3,924,571
" "	1863.....	4,581,720

In the items of woolens and worsteds, tin plates, steel, iron, and others, the increase in 1863 is quite marked, and if to the above sums be added for 1863, the heavy exports to the South, *via* Matamoras, Havana, Nassua, etc., the amount will probably be doubled.

The foreign import trade of Great Britain does not suffer in comparison with former years. The results are as follows :—

Imports 4 mos.	1861..	£35,424,040	$476,958,000
" " "	1862..	27,833,166	
" " "	1863..	35,084,677	

equivalent to over five hundred millions of dollars for the whole year.

SCHENECTADY & CATSKILL R. R.

NOTICE is hereby given that books of subscription to the capital stock of the Schenectady and Catskill Railroad will be opened at the office of H. G. STEBBINS & SONS, No. 46 Exchange Place, New York, on THURSDAY, August 13, and will remain open until SATURDAY, Aug. 22. The Company is fully organized under the general law of 1850. The capital, $1,000,000. Shares, $100 each; 10 per cent to be paid at the time of subscribing. The construction of the road not to be commenced until the entire capital stock is subscribed. The amount of stock to be subscribed in the City of New York is $600,000. In case of excess of subscription in the City beyond that amount, the distribution will be pro rata among the subscribers in New York.

This road connects with the New York Central Railroad at Schenectady, and runs thence to Catskill, forty miles, in a direct or air line, with a remarkably easy grade. The saving in distance from Schenectady to Catskill, between this route and that via Albany, is twelve miles by rail and thirty by canal, and still greater saving in time and facility of transportation, by avoiding the inconvenience and detention of the overslaugh and twenty-nine locks. A line of swift and superior steamers will meet the cars at Catskill, making the passage from that place to New York in five hours. Beside a large proportion of the travel and freight of the New York Central, it will receive most of the travel and freight of the Albany and Susquehanna Railroad by its intersection ten miles below Schenectady. It will receive the accumulations of freight and passengers west from railroad lines extending to Lake Erie, north from Lake Champlain, Canada and Saratoga, and south from a cheap river travel of one hundred and ten miles, with ample depth of water, and wholly free from obstruction—all by the construction of only forty miles of track, on one of the most economical routes known in the history of American railroads. Of the speedy construction of the road, and its large profits, no doubt need be entertained. Contractors of responsibility and experience offer to complete the double-track, rolling stock, fences, etc., within the capital.

1t34 D. D. CAMPBELL, President.

PROPOSALS FOR CONSTRUCTING A BRICK TUNNEL UNDER LAKE MICHIGAN, TWO MILES LONG, FOR THE CITY OF CHICAGO.

OFFICE OF THE BOARD OF PUBLIC WORKS, CHICAGO, August 13th, 1863.

Sealed Proposals will be received at this office till Wednesday, September 9th, at 11 o'clock A. M., at which time the Board will open the same, for doing all the work and furnishing all the materials required for the construction of a brick tunnel, five feet clear diameter, and extending from the present pumping works of the city, two miles out, under the bed of Lake Michigan, and through what numerous borings invariably show to a stiff blue clay soil, together with land and lake shafts, and protecting cribs, in accordance with the plans and specifications for the doing of said work, to be found on file in the office of this Board on and after the 19th inst.

The Board would prefer to let the entire work to one contractor or company, but will receive separate proposals for the tunnel proper and land shaft, for the protecting cribs, and for the cast iron cylinders for lake shafts.

The Board reserves the right to reject any or all bids, and to accept any one bid complying with the conditions of this advertisement.

The bids must be sealed, and must be accompanied with a bond of the penal amount of $200, blanks for which will accompany the specifications, guaranteeing the execution of a contract in accordance with the bid, in case the bid is accepted.

Proposals must be directed to the Board of Public Works, and indorsed "Proposals for Lake Tunnel."

Satisfactory security for the faithful performance of the work will be required of the parties whose bids may be accepted.

J. G. GINDELE,
FRED. LETZ,
F. C. SHERMAN,
3t34 Board of Public Works.

NEW YORK CENTRAL RAILROAD CO.

TREASURER'S OFFICE, ALBANY, Aug. 14, 1863.

SEALED proposals will be received by this Company until 3 o'clock in the afternoon of the 10th day of SEPTEMBER next, for the purchase of its Coupon Bonds (of $1,000 each) to the amount of ONE MILLION OF DOLLARS, (to meet, in part, the debt of Three Millions of Dollars which will become due on the 15th day of June next) bearing interest at the rate of SIX PER CENT. per annum, payable semi-annually, in the City of New York, on the 15th day of June, and the 15th day of December in each year, and the principal payable on the 15th day of December, in the year 1887.

Proposals indorsed, "Proposals for Six Per Cent. Bonds," may be addressed to the undersigned at this office, or at the Bank of Commerce, in New York, and may be for any amount not less than $5,000.

The Directors reserve the right to reject any proposal and no conditional bid will be received.

A deposit of five per cent. on the amount must accompany each proposal. In the case of rejected bids this deposit will be returned without delay, and in the case of accepted bids, interest will be allowed thereon at the rate of six per cent. per annum from the 10th day of September until the 1st day of October next, when the Bonds will be ready for delivery, on payment of the balance of ninety-five per cent. In case of failure to pay such balance, the deposit of five per cent. will be absolutely forfeited to the Company. The first Coupon will be for the amount of interest ($12 50) to accrue from the 1st day of October to the 15th day of December next.

A sinking fund of two per cent. per annum on the amount of the loan will be applied to its reduction, or to providing means for its payment, in such manner and under such regulations as the Directors may from time to time adopt.

3t34 JOHN V. L. PRUYN, Treasurer.

WARNCKE & BROWNELL,

RENOVATORS AND DYERS OF PLUSHES ON CAR SEATS, STEAMBOATS, AND FURNITURE.

Railway Timekeepers,

WITH HEAVY STERLING SILVER CASES.

Frank Leslie's Illustrated Newspaper, of Feb. 21, 1863, says: "HUBBARD'S TIMEKEEPERS are becoming proveroial for their accuracy and reliability. They are particularly valuable for officers in the army and travelers."

The *Army and Navy Gazette*, of Philadelphia, in its number of May 9, reviewing this watch says: —"We are pleased to see that the importations of the HUBBARD BROS. are meeting the enormous sale that such extraordinary enterprise as theirs so richly merits. These watches are novelties produced by no other house, far exceeding other manufactures in point of accuracy and elegance. Fidelity and promptness to their patrons render the house a desirable medium for traders in the army."

The *New York Weekly*, of July 23, 1863, voluntarily says:—"We have been shown by the Messrs. HUBBARD BROS., who are the exclusive Importers of the article, what they most appropriately term, the RAILWAY TIMEKEEPER, being a superbly finished watch, which is warranted to keep the most accurate time in all climates. The beauty of these Timekeepers is only equalled by their cheapness."

The RAILWAY TIMEKEEPER has *heavy solid sterling silver cases*, beautiful white enamel dial, handsome gold hands, with superior regulated movement, *warranted to run and keep excellent time!* Price, per case of half dozen, $60, by mail $1 65 for postage. If registered, 20 cents additional. A safe delivery by mail guaranteed. *Sold only by the case.*

The RAILWAY TIMEKEEPER is also furnished in handsome silver-plated case, and in all other respects the same as the silver ones, while in appearance they are fully equal. Price $48 per case of six. Postage, $1 65. Registering 20 cents. *Sold only by the case.*

MAGIC TIME OBSERVERS!

THE PERFECTION OF MECHANISM!

Being a Hunting, or Open Face, or Lady's, or Gentleman's Watch Combined, with Patent Self-Winding Improvement!!!

The *N. Y. Illustrated News*, in its issue of Jan. 10, 1863, on page 147, voluntarily says:—We have been shown a most pleasing novelty, of which the HUBBARD BROS., of New York, are the sole importers. It is called the MAGIC TIME OBSERVER, and is a Hunting and Open Face Watch combined. One of the prettiest, most convenient, and decidedly the best and cheapest timepiece for general and reliable use ever offered. It has within it and connected with its machinery its own winding attachment, rendering a key entirely unnecessary. The cases of this Watch are composed of two metals, the outer one being fine 16 carat gold. It has the improved ruby action lever movement, and is warranted an accurate timepiece." Price, superbly engraved, per case of half dozen, $204. Sample Watches in neat morocco boxes, for those proposing to buy at wholesale, $35. If sent by mail the postage is 36 cents. Registering 20c.

☞ Watches sent by express to any part of the Loyal States with bill payable to Express agent upon delivery. Persons ordering in this manner must enclose $2 as a proof of their sincerity, the amount to be credited on the bill.

Conductors, Engineers, and all others in the disloyal States, or any parts thereof, must send payment in advance, as the Express Companies peremptorily refuse making collections in such precarious localities. Money can be sent by mail or express. If by express or mail in a registered letter, at our risk. Our patrons are requested to call in person, when it is convenient for them to do so.

RAILROAD IRON.

2,000 TONS BEST QUALITY WELSH RAILS, 50 and 58 lbs. per yard.
For sale by

PERKINS & LIVINGSTON,
54 Exchange Place.

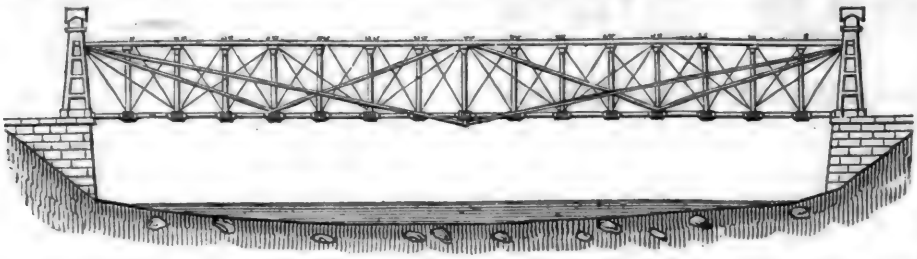
RAILROAD IRON.

THE undersigned, agents for the manufacturers, are prepared to make **CONTRACTS FOR RAILS** delivered free on board at ports in England or ex-ship at ports in the United States.

M. K. JESUP & COMP'Y,
44 Exchange Place.
New York, 1st June, 1863.

RAILROAD IRON.

ENGLISH and AMERICAN Railroad Iron for delivery in New York and other markets in the United States and England. Contracts negotiated by



E. A. & S. W. HOPKINS.
70 Beaver st., New York.

BRASS SWITCH LOCKS.

(In ordering, send key in letter, to have Locks made to match.)

WILLIAMS & PAGE,
67 Water street,
BOSTON.

FINK'S PATENT IRON RAILROAD BRIDGE.

THE undersigned is prepared to manufacture and build in any part of the United States and Canada, at reasonable terms, FINK'S PATENT IRON BRIDGE in spans from 20 to 300 feet. The same is favorably known, well tested and already extensively introduced, is stronger and more economical than any other Bridge now in use, requires no repairs, and no adjustment, but is perfectly adjustable. For plans and particulars apply to

C. J. SCHULTZ,
Letter-box No. 1,393, Pittsburg, Pa.

DAVISON, DICKINSON & CO.,
CIVIL, MINING AND MECHANICAL ENGINEERS,
No. 229 BROADWAY, NEW YORK,
AGENCY, No. 58 BALTIMORE STREET, BALTIMORE, MD.

PLANS AND SPECIFICATIONS FURNISHED FOR ALL KINDS OF MACHINERY, and superintended during construction. RICE HULLERS, CLEANERS and POLISHERS. GAS WORKS ERECTED on THE MOST APPROVED PLANS. New and Second-hand MACHINERY constantly on hand. IRON BOUGHT AND SOLD ON COMMISSION.

SOLE AGENTS FOR BATES' STEAM GAUGE.
MANUFACTURERS OF MARINE CLOCKS, STEAM ENGINE REGISTERS, INDICATORS AND GAUGES, ALSO IRON PIPE, FITTINGS, BELTING, HAIR AND WOOL FELTING.

HENRY J. DAVISON. WM. LEE STILES. P. P. DICKINSON.

BAKER'S
Dining & Lunch Rooms,
125 & 127 GRAND ST.

New York, Saturday, August 29, 1863.

Public Works of Chicago.

We have received from A. W. Tinkham, Esq., Secretary, the second annual Report of the Board of Public Works of Chicago being for fifteen months ending the 1st April 1863. This board consists of four Commissioners one of whom is the Mayor of the City and ex-officio a member, and employs a Secretary, and a City Engineer acting under its direction.

Chicago while enjoying an eminently commercial position, and advancing rapidly in consequence to the rank of a first class city, has had to overcome at the same time the most formidable difficulties of location, arising from the flat and marshy nature of the ground on which it was built, a sort of wet prairie, which extends for miles around, and across which the railway lines concentrating at the city seem like causeways rather than roads on terra firma. The traveller entering Chicago from the East for the first time, is quite astonished at the vast plains or prairie which he has to traverse, before he reaches the beautiful city on the shores of Lake Michigan, now containing about 150,000 inhabitants and increasing decennially in a ratio of more than 200 per cent.

The Chicago river, with two Branches passes through the city, and furnishes a secure harbor for the shipping which frequents the port. No vessel ever lies outside of the city in the Lake, as our shipping does in the bay of New York. Of course the river with its basins and canal cuts, furnishes all the water accommodation for the lake craft, as well as for the boats which ply upon the Illinois canal, and literally has miles of wharves, equal in linear extent to those of the harbor of the city of New York itself.

But even the greatest and most wonderful prosperity is not without some drawbacks. New York for more than two hundred years, "had water every where" but none fit to drink. And Chicago is in the same category. The well water of this city was brackish and warm, and that of Chicago procured from the Lake swarms with small fish, which strainers cannot keep out, and it assumes a milky color, whenever there is any storm to disturb its surface.

Chicago also suffers from its own prosperity in another way. The water of the river to which we have alluded, is the receptacle for a large amount of the filth of the city, especially for the wash of the breweries, factories, cattle pens, distilleries, slaughter houses, gas works and machine shops which crowd its banks for miles. At times the smell is intolerable, and as the numerous tugs, which are constantly employed in the harbor in towing the large steamers and vessels from wharf to wharf rush about, they turn up the most fearful combinations of materials which were discharged into the river. To use the words of the report before us, the bottom of the stream "seems to be covered with tarry substances which have accumulated to such an extent that its whole bed seems to be covered with it" and "*every steam tug wheeling* up the water, makes a portion of tar rise to the surface." So great has been the nuisance indeed, that several eminent chemists have recently been employed to investigate the causes of the black appearance of the river, and to analize the water. Drs. Mariner and Mahla reported as the results of their inquiries that the color and impurity were owing to the causes already stated.

The Board of Public works is chiefly occupied therefore with two subjects. Sewerage and a supply of wholesome drinking water, and the report under consideration is principally devoted to these subjects.

WATER WORKS.

The water now used in the city of Chicago is supplied from the Lake, and pumped into reservoirs of wood by steam engines, and thence distributed throughout the city, and the whole amount of distributing mains in connection with the works is 98 miles and 2643 feet over. The supply mains not included in the above are 6 miles and 2247 feet in length, and the whole amount of pipes laid in the city of all sizes is 104 miles and 4890 feet.

COST.

The works themselves have cost in all $1,118,494 97, the amount having been procured on water loan bonds, which were readily negotiated at the par of 7 per cent, except about $67,780 which was derived from water rents.

EXPENSES.

As the items give us some idea of the work we state them.

Int. on water loan bonds	$71,306 77
Expenses at pumping works for 15 months	20,471 16
Miscellaneous repairs, including new inlet house and dredging basin	9,649 26
Miscellaneous operating expenses	21,189 32
Total for the 15 months	$122,614 51
But besides there was expended by the board in laying distributing mains	$39,197 17
And for other permanent additions to the works	5,031 44

The report does not tell us how these sums were paid, nor to what account they were charged.

INCOME.

Water rents received from January 1 1862, to March 31 1863, inclusive	$188,448 28
Profits tapping pipes	846 52
Total	$189,294 80

So that there has been a surplus of $66,680 29 remaining to the credit of the Board of public works, after paying interest and working expenses; and after paying the two amounts stated, $44,228 61, there was still a surplus of $22,451 08, so that it may be readily seen that the usual financial skill and good management of the Chicago people are evident in this as in almost all other causes affecting the pecuniary interests of the city. The people of Chicago do not live on the plunder of

their neighbors, nor pile up fortunes by frauds on their treasury. We hope the day may be far distant before they will suffer as the taxpayers of this city have done from municipal dishonesty.

The condition of the drinking water having become a matter of serious concern, for the reason that the wash of the rivers, affects the water of the lake for some distance along the shore, and that it becomes turbid in certain states of the weather, the people of Chicago have determined to obtain a new supply, and for this purpose after the suggestion of various plans have resolved on constructing a tunnel into the deep water of the Lake two miles in length, as stated in the advertisement to contractors to be found in another part of this JOURNAL. An iron pipe with flexible joints was proposed, but though the first cost was less than that of the tunnel, it was deemed inexpedient, because it might be injured by anchors, by the sinking of vessels, or the action of the Lake current.

It is found that the bottom of the lake, through which the tunnel is to be constructed is clay, and easily worked. Shafts are to be sunk, composed exteriorly "by sinking octagonal cribs 80 feet in diameter, with central spaces 30 feet in diameter leaving an average of 25 feet thickness to the crib around the shafts proper, which is to be of iron, and a cylinder of 9 feet in diameter." The excavations of the tunnel will be carried on below the bottom of the lake by means of these apertures or shafts, and the particular process to be adopted is after the plans and drawings of the French Engineer Cezanne, as illustrated in late numbers of the Journal of the Franklin Institute, Philadelphia.

SEWERAGE.

The draining of Chicago is a difficult matter, so slight is the elevation of the city above the lake. It appears however, from this report, that the total length in feet of sewers on the 1st April 1863, was 302,088 feet equivalent to $57\frac{23}{333}$ miles, and of private drains the number was 365.

IMPROVEMENTS OF THE RIVER.

The condition of the river as we have already stated, has attracted considerable attention. Two artificial methods have been suggested for its improvement, the one by a deep cut through the summit level of the Illinois Canal, so as to turn the water of the lake, through the Chicago river into the Illinois river which is feasible, and will some day be accomplished, when the state of Illinois becomes able; the other by making canals from the Lake to the North and South branches.

CEMETERY AND PARK GROUNDS.—STREETS.

The subjects are treated in this report with clearness and conciseness. The part which might interest our city readers most is that in relation to pavements. There are 400 miles of streets, with different kinds of pavements, and as this subject is one which interests us of New York, we extract from the report what is said of the various kinds, noticing that the Nicholson or wooden pavement seems to be the favorite plan in Chicago.

NICHOLSON PAVEMENT.

So far as our present experience goes, the Nicholson pavement is the best adapted to our most important streets where the buildings are of a permanent character, and the traffic large. As our experience in regard to this pavement dates back no farther than 1856, we can only say, that after between six and seven years heavy wear, as at Wells street between Lake and South Water, the pavement is yet in good condition, and seems likely to last a considerable time longer. Blocks of pine taken out last year from this Wells street pavement, were worn down in height but half an inch, then measuring five and a half inches, their first height having been six inches. Pine we have thought preferable to oak, as the softness, toughness and elasticity of the same admits the impression of the fine gravel on the top of the blocks, thus making a very hard surface, and with the spreading and brooming of the blocks at their edges closing almost the whole joint between them, so that in connection with the saturation by the tar, it is completely protected. Such pine blocks taken out at the intersection of Wells and Lake streets after six years wear, had a perfectly sound appearance, as if put in but the previous month.

BOULDER STONE PAVEMENT.

The boulder stone pavement has been put on several of the most traveled streets. In Lake street the boulder pavement was ruined in five years, and *was replaced by the Nicholson pavement* in 1861. The pavement in South Water street, of the same kind, is almost ruined, and needs a thorough repair. Clark street, between Lake and South Water streets, was re-paved last year, and the same process will be required again at least in two years. Randolph street, between Michigan avenue and the bridge, was paved with boulders in the fall of 1857, and will soon need repairing from State street to Market street. In streets less traveled than the above named, this pavement shows less holes than in them, but it still has so much unevenness that teams avoid it wherever the Nicholson pavement is near to it in a parallel line. The boulder stones are very unequal in size, and therefore render an unequal resistance to impression. They are of a poor quality, as almost half of those brought to this market are very soft and marly, and cannot withstand the influence of the temperature. A selection of the best of the boulders in size and quality would make the boulder pavement cost almost as much as the Nicholson pavement. If good and sound boulder stones, nearly equal in size, could be got at a reasonable price, the Board would consider such a pavement suitable for streets not subject to heavy teaming.

BLOCK STONE PAVEMENT.

Some of the streets have been paved with block stone or limestone pavement. The blocks are of soft limestone, with many seams. If such blocks were on their bottom beds of the same size as on the top, such a pavement would resist far better the weight of heavy teams than it now does. But as the stones, as put in by the contractor, are generally of unequal size and smaller on the bottom than on the top, the pavement settles unequally, and the corners on the joints and larger pieces are broken off. Thus holes will appear more and more, and the joints will wear out, so that the felloes of wagons will be forced between the blocks, as can be seen in South Water street, between Wabash avenue and Michigan avenue. In streets without much heavy traffic, as Washington street, La Salle street and others, this pavement may last a number of years, but with more or less jar and noise, as with the boulder pavement.

MACADAMIZED AND GRAVELED STREETS.

In regard to most of our macadamized and graveled streets, much is to be done and a thorough reform is required. The city has at this time twenty-five miles of macadamized and graveled streets. Whoever has observed the improvement and construction of such streets, built since 1856, as for instance, Canal street, Milwaukee avenue, Rush street, Kinzie street, State street south of 12th, Archer road, etc., must have seen that all sizes of stones, large and small, and of different shape, have been thrown in the street without much selection, and covered with a thin course of finer stones. On those streets large stones up to the size of one-half of a cubic foot can be seen today mixed up with smaller stones. Many of the streets have been built of stones greatly differing in size and having an unequal ability of resistance, including limestone and Joliet gravel. Very much depends upon the manner in which such streets are constructed. When the large stones are put first on the ground carefully, then smaller ones above the same, and the smallest on the top, a street can be built tolerably well. A sample of such a street can be found on Old street, from State street to Old street bridge, on which many and heavy teams are passing daily. The surface consists of very small stones, equal in size, and forming a very hard and compact mass, the material used being limestone.

The Board have built up to this time two macadamized streets of bituminous limestone, namely, Monroe street, from State street to Clark, and North Wells, from Kinzie street to Green Bay road. The original manner in which macadamized streets were built, has been considerably improved during a number of years, and after many experiments by French engineers, a system has been adopted which affords great advantages, over the old method, and gives much satisfaction. Precisely the same system of construction was applied to these two streets. The average thickness of the stone body is fifteen inches, and it was put on in two different courses. The lower course consists of broken stones in size from two to three inches, and was eight inches thick. The upper course had a thickness in the centre of ten inches, and on both sides of four inches, averaging seven inches, with stones in size from one-half inch to two inches. Each of the course was rammed separately with a heavy roller. For filling up the interstices between the stones, and to effect a solid bond of the mass, a course of fine cement gravel and fine limestone screenings two inches thick was put on the top. Although the size of the stones in the top course does not fully answer to the size as put down in the specifications, on account of a defect in the machinery at the quarry, these streets are, nevertheless, good samples of their kind, and they will always remain in good condition while kept in their original shape and crown. Already these streets ought to be filled up, particularly North Wells street, about three inches for a width of ten feet in the center.

The report concludes with a statement of the financial affairs of the Board, where we find many interesting facts expressed in the form of dollars and cents, which are not alluded to in the text of the report.

On the whole, the document is worthy of Chicago and the practical business character of its citizens. We regret that it did not more fully explain the projects of the "new pumping works at Winnetka," and tell us something more of Crystal lake. Whenever Boston or Philadelphia or Chicago talk about water, we of New York open our eyes and ears to see and hear if it is possible to have any finer than the Croton, or any such aqueduct as the High Bridge.

The Oil Business.

Crude oil continues to advance steadily, and now maintains a very respectable price for producers. It may now be obtained at prices ranging from $5 50 to $6 50, according to location on the creek. Never since the breaking out of the oil excitement has the demand been as great or prices as well maintained as now. Stock in flowing or pumping wells is held at fabulous prices, and "sites" for new wells are eagerly sought after.

A new well has been struck on the Egbert place since our last issue, and by many is considered a fine thing. It flowed about eight hundred barrels per day until last evening, when the seed bag burst and it ceased flowing instantly, but will undoubtedly be resuscitated by Saturday. There are also two new wells on the Story farm, one flowing four hundred barrels and the other one hundred barrels.

Oil on the platforms in this place is now worth $11, packages included; barrels are still bringing

from $3 to $3 25. Hauling is now worth $2 per barrel, and teams are scarce at that price.—*Petroleum Reporter (Titusville) Aug.* 14.

Racine and Mississippi Railroad.

The fourth year of the operations of this road by the trustees for the first mortgage bondholders expired on the 10th of May, 1863. We have been favored with a copy of the Report of the General Manager, Superintendent and Secretary, giving a detailed account of the operations of the road during that time. The earnings were:

From freight	$254,081 71
" passengers	74,348 34
" mails, etc	16,389 15
	$344,769 20

And the expenses were:

Repairs of road	$37,836 24	
" equipment	26,694 08	
" cars	24,379 04	
" bridges, etc	9,071 35	
Fuel	43,465 66	
Oil and waste	4,917 28	
Station service	24,837 28	
Train hands	33,968 93	
Taxes—local	8,135 97	
" United States	1,454 53	
Salaries	15,208 22	
All other expenses	30,960 90	
		260,929 48
Net earnings		$83,839 72

The above includes the business of the Northern Illinois Railroad, operated by the trustees of the Racine and Mississippi Railroad, during the year, between Freeport and Lanark, 20 miles, and between Lanark and Savanna, 18 miles, since the 1st of September last, when the road was opened for traffic over its whole length, completing the connection between Lake Michigan and the Mississippi River by a line of 142 miles. The Report says:

The wheat crop of 1862 was very deficient, both in quantity and quality, along the whole line from the lake westward, and extending through Iowa as far as it is expected business will be drawn for shipment to Savanna. It is estimated to have been less than one half an average crop, and of very inferior quality. In Jackson Co., Iowa, opposite Savanna, the wheat was almost an entire failure, and it is remarkable that it is the first time there has been a deficient crop since the settlement of the country more than twenty-five years ago. The failure not only reduced the amount of business coming to the road, but the poor quality of the wheat caused it to be shipped to Chicago and Milwaukee, where it could be mixed with wheat from other sections of the country. The market in Racine was so affected, that instead of increasing in importance, as was naturally to be expected on its being connected with the river, the business of the season was much less than in previous years.

A large increase from other sources of business made up, in a great measure for the deficiency in wheat.

The passenger business shows a satisfactory increase over the previous year, and the improvement is most marked from 1st of January:

1st of January to 10th of May, 1862.. $15,637 39
1st of January to 10th of May, 1863.. 27,765 94

There is every indication of continued improvement in this department.

It is not intended to make further additions to the rolling stock at present. In the last three years, there have been added 86 box freight cars, built in the shops at Racine, which could not now be supplied except at an increased cost. Four new first class passenger cars were provided for in the past winter before materials had advanced to present prices, and three of them are now on the road, the fourth in the painters hands. Two first class freight coal burning engines were put upon the road in November. The engines were contracted for in June, and at the time of delivery could have been sold at an advance of $3,000 each on the contract price. The receipts of the road were at the time falling short of what had been expected, and it was taken into consideration whether it would not be well to dispose of the engines; but, in view of the requirements of the business, it was decided to keep them, and they have done good service since. The engines were named "Northern Illinois" and "Mississippi." The advantage of coal burning has not been fully tested yet. Illinois coal was used at first, but Ohio coal has lately been obtained, and is producing the best results. The rolling stock of the road is sufficient to earn a very large revenue, could the business be confined to the line from the lake to the river, but when a large proportion of the business draws off cars to Dunlieth, Chicago and Milwaukee, there is a constant demand for cars that cannot be supplied. The Chicago and Northwestern Company undertook to supply their proportion of cars for Chicago business but have been unable to do so, and in consequence, the business has been sustained by Racine and Mississippi cars at a sacrifice. The want of a cattle yard by the Northwestern in Chicago, has also been a great inconvenience and obstruction to business in the past season. The cattle business cannot be continued another winter, advantageously, unless the Northwestern Company guarantee to provide rolling stock and a convenient cattle yard in Chicago, which they have given assurances they will endeavor to accomplish.

The net results of the year's business, show a falling off as compared with the previous year, which is readily accounted for by the additional expenses incurred in conducting a scattering business from which a small mileage is obtained. Fuel has risen materially in cost. All materials used in operation have also largely increased. Wages are higher. Taxes are greatly increased. The character of the business of the past season has also led, unavoidably, to a great increase in the mileage of trains.

The crop prospects are at the present time most satisfactory; and, if realized, will restore a full local business, which is the most profitable. In the coming season, a large increase of business may be anticipated from the development of the river connection.

On the 1st of October, the track from Racine to Freeport, and thence on the Northern Illinois Railroad to Savanna, was divided into two divisions, the first from Racine to Beloit, 68 miles, and the second from Beloit to Savanna, 74 miles, under two road masters superintending.

During the year a construction train has been employed, opening the ditches in the excavation, raising the grades on the embankments, and turning out gravel for ballast. A large quantity of spike has been used, partly in repairs, and partly in supplying a deficiency in the original quantity put in. The chairs which have been used are of a very inferior pattern, and a change for future repairs is recommended. The materials used in repairs have been: 5,908 feet of T rail, 13,435 feet of repaired rail, 25,466 cross ties, 18,671 lbs. spike, and 2,830 chairs. The aggregate cost, including labor and material, has been $41,574 97.

Of the bridging of the road, 649 feet which required renewal, on the bank of Root River, in Racine, has been filled up and docked. A new trestle bridge has been erected at Allen's Grove. Two stone bridges have been built at Beloit and Springfield. The Howe truss bridge over Rock River has been strengthened, and many of the smaller structures repaired. The turn-table at Beloit has been rebuilt, and that at Freeport repaired. The machine shop in Racine has been completed, and the passenger buildings at Clinton and Beloit repaired. A freight house has been erected at Clinton, also coal sheds at Racine, Delavan and Beloit. A side track has been constructed at Dakotah, also at the junction of the Chicago and Milwaukee Railroad in Racine.

The present condition of the road is good. The bridges, with one or two exceptions, are in good average repair. The iron in the immediate neighborhood of the stations requires renewal, and the procuring of 125 tons of T rail for this purpose is recommended. Six hundred lineal feet of bridging will require re-construction, which includes the bridge over the Fox River at Burlington, that at Smith's Crossing, and at the O'Plain, with one or two smaller ones.

The company have 11 passenger, 6 baggage, 2 mail and express, 56 platform, and 311 house and freight cars. The number of miles run by engines with passenger trains was 103,378; with freight trains, 237,358; with other trains, 23,595—total, 364,331, an increase over the previous year of 110,107. Number of passengers carried, 101,486. Tons of freight 152,215.

The office of the company is at Racine, Wisconsin. The officers are:

General Manager.—G. A. THOMSON.
Superintendent.—JOHN C. CAMPBELL.
Engineer.—NATHANIEL BAILLIE.
Secretary.—WM. V. BAKER.

☞ The Directors of the Sacketts Harbor and N. York Railroad appointed a committee of three—John Thorn of Utica, C. W. Bishop of Henderson, and Geo. H. Phelps of Watertown—to take up the railroad track, with the intention to sell, convey and deliver the property of the road, in behalf and for the best interests of the Company. About one-half mile of the track was taken up, when another committee of four—Luther Barrows, C. A. Benjamin, George Clark and John Canfield—served an injunction, and restrained the railroad committee from disturbing the property of the road, on the ground that the Directors have no right to take up and destroy a railroad corporation. The defendants before Judge Mullin, moved to dissolve the injunction, which being refused, the trial is noticed on the 2d Tuesday in September, before his Honor, Judge Mullin—Clarke and Calvin, plaintiffs' attorneys; Kernan Quin and

Kernan of Utica, defendant's attorneys.—*Utica Observer.*

Equilibrium of the Republic.--The State of Western Virginia.

BY EX-GOVERNOR WILLIAM GILPIN.

This new State, formed of that portion of Old Virginia which lies within the Alleghany Mountains, and contributes its waters to the Mississippi Basin, has, by act of Congress, been admitted into the Union. This diminution in area of an ancient Atlantic State, occurring simultaneously with a radical change in the geographical distribution of population on our continent, draws attention to facts of more profound significance than have hitherto attracted notice.

The States and population of the Basin of the Mississippi are thus extracted from the census of 1860:

Ohio	2,339,593	Minnesota	172,022
Indiana	1,350,941	Pennsylvania, 21 counties	727,256
Illinois	1,711,753	West Virginia, 39 counties	280,691
Kentucky	1,155,113	North Carolina, 10 counties	79,077
Tennessee	1,109,341	Alabama	964,296
Mississippi	790,396	Texas	602,432
Louisiana	709,290	Nebraska	13,000
Arkansas	435,427	Colorado, 13 c'n-ties	27,000
Missouri	1,182,317	Dacotah	4,500
Kansas	107,110	Indian Territory	95,000
Iowa	674,968		
Wisconsin, 21 counties	428,158		
New York, 8 counties	430,887		
Total			15,392,548

STATES OF THE PLATEAU AND PACIFIC DECLIVITY.

California, Oregon, Nevada, Washington,	Utah, New Mexico—⅔, Colorado—½.
Population	667,980

STATES OF THE ST. LAWRENCE BASIN.

Vermont—½, New York—⅓, Michigan, Wisconsin—½,	Ohio—1-6, Indiana—1-7, Illinois—1-20.
Population	1,867,955

STATES OF THE ATLANTIC DECLIVITY.

Maine, New Hampshire, Massachusetts, Rhode Island, Connecticut, Vermont—½, New York—⅔, New Jersey,	Pennsylvania—½, Delaware, Maryland, East Virginia, North Carolina, South Carolina, Georgia, Florida.
Population	14,666,149

In its origin, the United States of America was composed exclusively of States bordering on the Atlantic Ocean, and was created under the auspices of a population and interests restricted to the longitudinal margin between the Alleghanies and the seas. Without tracing through each decennial census the gradual entrance into the Federal Congress of new geographical elements and power, the following table of population for 1860 will exhibit the relative numbers as distributed in harmony with the physical geography of nature:

States of the Mississippi Basin	15,392,548
States of the Plateau and Pacific Declivity	667,980
Total population	16,060,523
States of the St. Lawrence Basin	1,867,955
States of the Atlantic Declivity	14,666,149
Total population	16,534,104

This immense expansion in geographical area together with the prodigious growth in energy, population and power which accompanies it, has profoundly modified the domestic relations of the heretofore harmonious family of the American people. Disorder and violence have always marked the eras when, with a growing empire, the scheme of government ceasing to harmonize with the energetic temper of the people, has become antagonistic to their instincts and repressive to progress. Revolutions, modest in their origin, begin by resistance to oppression. The legislation of the Federal Government has had for sixty years from its origin a proclivity to encourage the navigation and commerce of the sea, and to restrict this encouragement to the shores of the Atlantic Ocean. The prolific growth of the population and energies of the interior has outgrown the limited demands of that ocean and its population; the restriction of sufficient outflow to the other flank upon the Pacific becomes a check to progress, and has all the consequences of an oppressive monopoly. The statistics of ocean commerce, its growth being the special favorite of the Federal Government and policy, have been pampered by all forms of partial legislation. The statistics and growth of commerce, navigation and transportation in the interior of the continent have been the object of neglect and depression. Yet in 1860 we find the aggregate value of interior relations, as expressed in dollars, to be five times in amount to the exterior relations, similarly estimated. In population, production and commerce the interior is now prodigiously in the ascendant.

It is manifest that immense modifications of the Federal power have become imperatively necessary to correct this departure between the Government and the people, and to adjust the equilibrium. One profound cause of the sanguinary discord that now tears our country is here discernible. If we suppose ourselves to have reached the coming centennial anniversary of July 4th, 1876, and take a retrospective glance, the magnitude of the modifications necessary to our continued harmonious union will display themselves at a glance. Geographical changes in the locality and administration of the Federal power, as great as those which transferred it from London to Philadelphia and Washington, reveal themselves and the necessity of such modifications dictates itself with mathematical exactness. As a fact of pre-eminent significance, occurs the accession to the States of the Mississippi basin of Western Virginia, and the addition of two Federal Senators to this geographical division of our country. This unchains the political of hide-bound spell routine and repression to add new forces to the area and energies of progress.—*Colorado Republican.*

Connecticut and Passumpsic Rivers R. R.

The earnings, expenses, etc., of this road for the years ending May 31, 1862 and 1863, have been as follows:

Earnings:	1862.	1863.
From passengers	$63,794 04	$78,920 55
" freights	88,871 75	117,876 00
" mails	9,100 00	9,100 00

	$86,014 78	$100,769 95
Net balance	$78,749 62	$108,097 10

The balance of earnings after paying interest on bonds, and $16,000 to Trustees of Sinking Fund, have been appropriated to the payment of the floating debt and the extension of the road. The amount of sinking fund at this date in the hands of the trustees is $111,140, which is invested in the bonds of the corporation.

The following statement will show the receipts, expenses and net earnings for 14 years ending May 31, 1868:

	Total Receipts.	Total Expenses.	Net Earnings.
1850	$112,634 75	$50,930 28	$61,714 37
1851	149,583 11	65,458 19	84,124 92
1852	151,995 45	77,009 07	74,986 38

1862	164,764 40	86,014 78	78,749 62
1863	208,867 05	100,794 95	108,072 10

This company was chartered November 10th, 1855, with an authorized capital of $2,000,000, and power to increase the same to $3,000,000. In 1843, the charter was revived, and the company organized January 15, 1846, and the road opened for use from White River Junction to Bradford, 28 miles, October 10, 1848; and to Wells River Village, 40 miles, November 9, 1848. In November, 1850, an additional section of 20⅔ miles, to St. Johnsbury, was opened; and on the 21st of October, 1858, the road was extended to Barton, its present terminus—making the whole length of completed road from White River Junction to Barton, 90 miles. The Northern section, 20 miles in length, is now in course of construction, by which it is proposed to connect with the Stanstead, Shefford and Chambly railroad, now completed to Stukely Line, about 15 miles from Magog Village, at the outlet of Memphremagog Lake. In 1861–'62, a company was chartered by the Canadian Parliament, called the "Massawippi Valley Railroad Company," with authority to construct a railroad "from some point on the Grand Trunk railway between Lenoxville and Crompton Centre, to the Benson Place, and thence to the Province Line in Stanstead," being about 20 miles; and when this road is completed, the Stanstead, Shefford and Chambly railroad can form a connection with it by building some nine miles of road easterly from Magog Village. Thus by building some 64 miles of railway, viz: the Massawippi Valley railroad, 20, the extension of the Stanstead, Shefford and Chambly railroad from its present terminus to the point of connection with the Massawippi railroad, say 24 miles, and the extension of the Connecticut and Passumpsic Rivers railroad to the Canada Line, 20 miles, a rich fertile agricultural section will be accommodated, and an air line railroad route opened from New York to Quebec via the valley of the Connecticut river, about 67 miles shorter than any other, and a saving of distance between Montreal and Boston, as compared with the Grand Trunk route, via Portland, of about 49 miles, by leaving the Grand Trunk at Waterville; or 78 miles via the Stanstead, Shefford and Chambly, and Passumpsic railroads. The report says:

The importance of extending the road to the Canada line, has at all times been apparent to the Directors, and they have labored diligently to effect that object, and by great exertions among the people of Orleans and Stanstead Counties in the summer of last year, a sufficient amount was raised to justify them in resuming work between Barton and Newport in September last. The work has so far progressed that the Directors feel warranted in assuring the stockholders that it will be completed to Newport in September, and to the

Province line before winter, at which point we expect soon to be met by Canadian roads. The Stanstead, Shefford and Chambly Railroad is now built to Stukely, some fifteen miles from the outlet of Memphremagog Lake, passing through a fertile country which must furnish a large remunerative business when a junction is made.

The "Massawippi Valley Railway Company," whose charter extends from our northern terminus to some point on the Grand Trunk Railway between Lenoxville and Compton, has been recently organized by the election of a board of officers whose reputation as railway managers and financiers should be a guarantee (if properly aided by those interested) of its early completion. A survey has been made showing the route to be feasible, and can be built at less than the average cost of roads in New England. It passes through a rich agricultural country, and near some of the best mineral districts of Canada, and cannot fail when completed to greatly increase the traffic over the Passmpsic road.

The amount of share capital paid is $1,280,500, viz., $308,200 common, $49,300 guaranteed and $833,000 preferred stock. The funded debt is $800,000, consisting of 1st mortgage 6 per cent sinking fund coupon bonds, dated December 1, 1856, and payable December 1, 1876. Interest payable June 1 and December 1, at Boston. These bonds are secured by a first and only mortgage on the road and property of the company. For their redemption at maturity an amount equal to two per cent of the whole funded debt, or $16,000, is annually set aside from the net earnings of the road, and placed in the hands of trustees to be invested in these bonds, or other undoubted productive securities. The interest on the bonds, and the appropriations to the sinking fund, have been regularly paid.

The equipment of the road consists of 8 locomotives, 8 passenger, 5 baggage and mail, 1 drovers', 109 box, 41 platform, 25 rack, 13 coal, and 10 gravel cars.

The cash value of equipments and materials on hand May 31, 1863, was as follows:

Locomotives	$53,600 00
Cars	83,025 00
Machinery and tools	9,566 32
Materials	38,236 12
	$184,427 44

	1862.	1863.
Miles run by engines	99,639	118,420
No. of passengers	53,978	62,730
Do. carried one mile	.....	1,892,225
Pounds of freight	44,940,280	62,162,216
Feet of lumber	5,156,056	7,689,901

The Valuation of Boston.

The aggregate amount of all the real and personal estate and polls, estimated by the assessors of the city of Boston, in the several wards, for the years 1862 and 1863, is as follows:

1862.

Ward.	Real Estate.	Personal Estate.	No. of Polls.
1	$6,859,700	$2,831,200	3,045
2	4,838,600	947,400	3,526
3	7,254,600	2,843,800	2,283
4	37,261,600	33,541,500	2,755
5	5,321,600	2,182,700	2,240
6	26,342,000	23,617,800	2,328
7	15,347,000	24,905,700	2,241
8	11,163,600	4,546,100	2,149
9	12,348,800	4,384,000	1,921
10	7,365,500	3,038,800	2,203
11	20,700,400	7,184,800	4,309
12	8,709,000	2,421,100	5,032
	$163,512,400	$112,444,900	34,038

Total amount of real and personal estate, $275,957,300.

1863.

Ward.	Real Estate.	Personal Estate.	No. of Polls.
1	$6,575,900	$2,974,700	2,535
2	5,403,000	929,900	3,961
3	6,863,500	2,913,900	2,381
4	39,324,300	40,240,300	2,760
5	5,083,200	2,441,400	2,325
6	28,616,200	28,948,200	2,359
7	15,255,400	29,057,000	2,138
8	11,232,000	5,119,700	2,243
9	12,685,200	5,108,000	1,857
10	7,593,900	3,212,700	2,031
11	22,209,100	9,919,700	4,392
12	8,817,600	2,002,200	4,508
	$169,659,300	$132,867,700	33,490

Total amount of real and personal estate, $302,527,000.

The rate of tax per $1,000, for the year 1862, was as follows: City and county tax, $8 41; State tax, $2 09—$10 50 per $1,000. The rate of tax for the year 1863 is $11 50 per $1,000.

By the above it will be seen that there is a gain on real estate this year of $6,146,900; gain on personal estate, $20,422,800. Total gain, $26,569,700. Less polls this year, 548.

Nashua and Lowell Railroad.

The receipts and expenses of this road for the years ending March 31, 1862, and 1863, have been as follows:

Receipts:	1862.	1863.
From freight	$98,971 27	$110,271 50
" passengers	77,108 41	83,419 76
" express	2,932 67	2,843 92
" mail	2,957 62	2,914 53
" interest	3,867 40	1,985 56
" contingent fund	4,890 80	.....
Total	$190,548 17	$201,435 27
Disbursements:		
Repairs of road	$24,221 84	$22,792 06
" engines	6,106 10	7,258 89
" cars	8,612 68	8,004 59
" bridges, b'ildings, etc.	3,059 63	6,644 83
Fuel	16,309 05	17,429 33
Rent	31,872 48	31,859 44
Mdz. and depot exp.	12,259 88	11,957 50
Conductors, etc.	21,718 50	21,273 42
Miscellaneous	18,388 01	18,958 29
Dividends 8 per cent.	48,000 00	48,000 00
Contingent fund	.....	7,246 92
Total	$190,548 17	$201,435 27

The following is a comparative statement of the receipts, expense and net earnings of the road for the years ending March 31, 1860, 1861, 1862 and 1863:

	Receipts.	Expenses.	Net.
1860	$235,950 16	$164,506 46	$71,443 70
1861	246,905 80	180,666 87	66,238 93
1862	185,657 37	142,548 17	43,109 20
1863	201,435 27	146,188 35	55,246 92

The dividends each year have been equal, viz: $48,000, or 8 per cent. on a capital stock of $600,000. The company has no bonded debt. The appropriation to contingent fund in 1860 was $21,749 82; in 1861, $18,238 93. In 1862, owing th the depressed condition of the cotton manufacturing interest from which much of the income of the road is derived, the earnings show a falling of some $61,000, or 25 per cent. The reduction in expenses amounted to $38,000 or about 21 per cent.; leaving a balance of net earnings of only $43,109 20. Recourse was had to the contingent fund, and $4,890 80 drawn therefrom to make out the two semi-annual dividends of 4 per cent. each. In 1863, $7,246 92 was again credited to that fund, which now amounts to $106,589 22.

The financial condition of the company April 1, 1863, is exhibited in the annexed balance sheet:

Construction	$486,593 84
Equipment	92,870 00
Fixtures and stock in shop	20,536 16
Real estate	17,748 54
Materials charged other roads	33,994 85
Notes receivable	37,000 00
Cash on deposit	62,005 29
Sundry accounts	400 54
	$751,149 22
Capital stock	$600,000 00
Unclaimed dividends	4,710 00
Wilton Railroad	7,000 00
Stony Brook Railroad	8,850 00
Dividend No. 49	24,000 00
Contingent fund	106,589 22
	$751,149 22

European Locomotives.

In a paper lately given to the public by D. K. Clark—Superintendent of machinery at the London International Exhibition of last year—it is stated that there were twenty locomotives altogether exhibited, of which eleven were English, and nine foreign. Fourteen had outside cylinders and six inside cylinders. Most of the engines were specially constructed for burning coal, a feature which has been introduced entirely since the former exhibition of 1851.

The English engines were mainly examples of the standard classes in general use on the principal English railways. Of the eleven exhibited, seven had outside cylinders, and four had inside cylinders. The foreign locomotives showed greater variety and originality of design; and were mainly constructed for lines with very heavy gradient and sharp curves, which are generally associated together on railways in mountainous districts, causing special mechanical difficulties which do not occur in the case of English railways. The most satisfactory of the plan for surmounting these difficulties is considered to be that of an articulated or bogie engine, having a single long boiler of large dimensions, mounted on separate carriages, with a swivelling connection, each having its own separate pair of cylinders, working six coupled wheels placed near together; so that the engine, although of great total length, could readily pass round very sharp curves, while the whole of the weight is made available for driving adhesiou. A marked feature of the foreign engines is the position of the valve gear outside the cylinders; but this is considered objectionable in respect of good working and durability.

In the large foreign engines as well as in some of the English, the boiler tubes have been crowded too close together, with the object of obtaining a larger extent of surface, from a mistaken idea that heating surface is mechanically the equivalent of evaporative power, without regard to the equally important consideration of the circulation of the water amongst the tubes. Another marked difference between the engines exhibited in 1851 and those shown in this exhibition is that, in the latter, Giffard's injectors have been extensively employed as a substitute for the feed pumps universally used at the former period.

Cape May Railroad.

The railroad to Cape May, via Camden, has been completed, and trains commence running through to Cape Island this morning without change. The great objection to this route to the Capes, this season, has been changing the cars for stages over several miles of swampy country, when the track was not finished. This is now obviated. —*Phila. Inq. Aug.* 22.

Commerce of New York.

Value of imports at New York from foreign ports for the month of July:

	1861.	1862.	1863.
Entered for consumption	$3,200,663	$13,799,505	$9,080,210
Withdrawn from warehouse	6,622,454	4,227,265	4,227,265
Free goods	2,972,054	1,831,932	683,880
Specie and bullion	6,996,498	219,001	182,245
Total entered at the port	$19,791,669	$21,952,471	$14,173,600
Entered for warehouse	1,769,636	4,502,764	6,057,342

Value of imports at New York from foreign ports, for seven months from January 1st:

	1861.	1862.	1863.

Exclusive of specie	76,618,211	77,491,490	107,488,540

Great Destruction of Rebel Railroad Property.

Memphis, Tenn., Aug. 20, via Louisville, Aug. 23.—About two weeks since Major General Hurlbut ascertained that there was a large amount of railroad stock at Grenada, which the rebels were endeavoring to get off South by making temporary repairs on the railroad. With his usual energy and promptness Gen. Hurlbut arranged an expedition to destroy this stock, first sending a request to Gen. Grant to make a diversion from the South to aid the enterprise. The expedition started from Lagrange, Tenn., on the 13th, under command of Lieut. Col. Phillips, of the 19th Illinois regiment mounted infantry, and reached Grenada on the 17th, driving Gen. Slimmer with 2000 men and three pieces of artillery from the place. They then destroyed fifty-seven locomotives, upwards of 400 cars, the depot buildings, machine and blacksmith shops, and a large quantity of ordnance and commissary stores. They captured a number of railroad employes and other prisoners. After Col. Phillips had thoroughly accomplished his work, Col. Winslow, from Gen. Grant's army, arrived with a force from below. The expedition returned from Lagrange to-day. Great praise is due to Col Phillips and his gallant command forever, during the hardships of such a march through Central Mississippi in mid August, and for so crippling the remaining energy of the rebellion in the Southwest.

Railroad Earnings--Weekly.

The traffic of the Great Western Railroad for the week ending August 14, 1863, was as follows:

Passengers	$19,230 56
Freight and live stock	18,023 17
Mails and sundries	1,205 18
Total	$38,450 91
Corresponding week of 1862	38,378 61
Increase	$80 30

The earnings of the Grand Trunk Railway for the week ending August 15, 1863, were:

Passengers	$31,626 88
Freight and live stock	34,999 78
Mails and sundries	2,800 00
Total	$69,426 66
Corresponding week, 1862	56,811 40
Increase	$12,615 26

The earnings of the Chicago and Alton Railroad for the 2d week of August, 1863, were:

Passengers	$14,300 90
Freight	26,860 63
Sundries	1,135 34

American Railroad Journal.

Saturday, August 29, 1863.

Stock Exchange and Money Market.

It is a singular fact that while our own money and stock market has been growing more in favor with purchasers for the last two months, there has been quite a panic on the London Bourse, and the leading journals of that city on the 1st of August inst., were all engaged in endeavoring to explain the causes of what they called "the little panic." The confederate loan tumbled a good many per cent, Greek coupons went down 20 per cent, so much for the new Hellenic Kingdom; Mexican, Spanish and Turkish securities fell from 5 to 12 per cent, while American stocks went up.

It is not our purpose to follow the explanations given abroad for these results, but merely to record the fact. And when we record it, we do so with the proud consciousness that this Country is fully able to respond to its engagements in peace or in war, in consequence of the general industry

and enterprise of our people; their vast power of production; their unlimited and illimitable internal commerce unshackled by any restrictions on its movements, and practically as well as theoretically free; to our millions of virgin agricultural lands; to our inexhaustible mineral lands teeming with silver and gold, and above all for the prevailing opinions among us, that here beyond all other regions in the world, there is "ample room and verge enough" for all that man can wish, or attain. Our present troubles in no way affect the general principles by which American brotherhood has attained not only success but wealth; and when we settle down again to our accustomed pursuits, we shall spring forward to a still loftier position in all the arts, and all the comforts, which give power to nations, security to their population, and render life a blessing. We trust this happy day is near at hand.

Among the subjects which attract attention just now is that of our currency, and what is to be its value on the return of peace. It is one on which the ablest minds exercise themselves in vain; for while on the one hand, a paper currency of vast extent, when suddenly reduced to a specie standard, according to experience, must produce a collapse, on the other it may be said, that our condition from first to last has been abnormal, and it is quite possible, the dreaded change may pass off without disastrous consequences. Everything we do in this country is done in a way peculiar to ourselves. Dr. Elder shows in his valuable psmphlet, that our total circulation in 1862, was only equal to that of England in 1815, though our wealth is 3-10ths greater than hers, and our per capita circulation is actually 1-5th less than hers at that period. The products of the loyal states for the year ending 1863 were $3,522,921,174, and those of the whole United States in 1860 were but $3,786,000,000. So far as the Banks of issue are concerned, the circulation beyond that of specie paying times is but about 15 per cent greater than it was then, or in round numbers twenty two millions; less than one dollar per capita of the present population. In addition to this, our commerce has kept up to within a fractional per centage of what it was when Cotton was enthroned as King and the whole Union worshipped it. In addition to this, we have another element coming to our aid, which a few years ago did not exist, we mean our gold bearing mountains, with their Pactolian streams; a vision of antiquity, but with us a reality. Take the wonderful region of Colorado, to which we have from time to time called the attention of our readers. We have now from Dr. Willing, a resident and explorer of that territory, some new statements in relation to its mineral wealth, which almost surpass belief, and yet to which we are bound not only to give attention but acceptance. He says in his recent able and thoroughly scientific report, which we propose to publish at the first convenient opportunity, that in the first place four fifths of all the gold in the world has been derived from "the drift or freed gold," and next in Colorado the number of ravines within the area set down and known as metalliferous, and across which veins of auriferous rocks are ranged, cannot fall short of 5000. Estimating, to be safe, that the acclivities of the majority of them are over 30° and the depth 1000 feet, though he prefers to consider the average acclivity 25°, and the depth 800 feet, the process of washing out this great number of ravines complete, (from the calculations made at the rate of only 1 cent to the pound of the original vein stone of one yard thick *and only one* vein,) would result in producing *thirty five billions of dollars.* When in most of the best known ravines the following results have been and are obtained, we can scarcely compute the enormous amount which is yet to be obtained from them. For example, if instead of one cent to the pound of ore, or $20 per ton of 2000 lbs, we find that the ton at the Elkhorn head produces 57 oz. and upwards of gold; at the Compadre 81 oz. per ton of gold and of silver 909 oz. to the ton, we may form some idea of what this Country is to gain from Colorado, in spite of the indifferent opinion of a certain dignitary at Washington at the commencement of the war, when urged to defend this territory, that we could do without Colorado. It will be remembered also, that this wealth is to be exhumed in the centre of the American Union, that it must inevitably flow thence to the nearest point, viz., to our Atlantic marts, and not dispersed over the world as at San Francisco to all comers, and we can therefore plainly see that whatever be our currency, we shall have a fund for its redemption near at hand and obtainable by ordinary labor. Twenty millions the present year, will assuredly be the product of Colorado, against twelve millions the previous year, and all that is now wanting is the Pacific Railroad to carry emigrant laborers, mining machinery and our Eastern manufactures to this Ophir, to bring about in a very short period, the brilliant results promised by Dr. Willing, not only, but by others equally well informed and reliable.

While speaking of the future of our Government currency, which even now is by no means as large as it was feared it might be, and distributed among a population in the loyal States now estimated at 24 millions, we have to remember that its legal character at one time questioned, is no longer so, and this has been determined by the highest tribunal of the State of New York, the Court of Appeals, a fortunate circumstance that we have so learned and stable a barrier against the ignorance or bad political tendencies of minor courts. Apropos of this, we have to acknowledge the receipt of the argument of John K. Porter, Esq., of Albany, on this very question raised by the Metropolitan Bank against the superintendent of the bank department of this State, where it assumed the shape of an inquiry whether Treasury notes were a legal tender. We had intended to have made many extracts from this gentleman's argument, as it is one of the most profound, scholarly, constitutional, and we will add Websterian productions of the day. Its breadth, soundness, learning and research are worthy of all praise, and the legal profession may take comfort in the reflection that the New York bar has in its ranks a member who reminds us of its palmiest days.

The subscriptions to the 5-20's continue on a large scale. The temporary falling off which we alluded to last week was exceptional. More than a million of these was converted on Monday and Tuesday of this week in this city, and it is a curious fact that a large amount came from Vicksburg, Louisville and Lexington, where but a few months since the spirit of opposition to the Union was rampant. It is a sure sign of the tendency of the convictions of Southern capitalists as to the result of the present contest. Gold has again fallen under the influence of our operations at Charleston. The destruction of Sumter, and the shelling of the city are certain to end in its capture if not destruction, and we believe this will be a satisfactory result to many of the confederate States, who have always attributed this war to the headlong counsels of the Junta which has ruled the South from this imperious place. It also appears that the armies of Rosecranz and Burnside are operating with great effect near Chattanooga, and that the heart of the Gulf States is to be pierced with a deadly arrow which will stick where it penetrates.

Sterling exchange has fallen to 135 and the transactions are light, for it is perfectly well understood that it does not pay to ship specie at present quotations.

Messrs. R. W. Howes, and C. A. Macy, recently President and cashier of the Park Bank, one of our most flourishing institutions, have established themselves as private bankers at No. 30 Wall street, the office being the same as that recently occupied by Mr. Cisco, and have introduced a new feature in their business, namely, to allow 3 per cent. to depositors, subject nevertheless to their checks at any time without notice. This movement indicates capital, and ability to handle it, and must have the effect to interfere largely with the old system of banking, when depositors get nothing for their funds, while the banks loan it out and make money by the operation. We wish these gentlemen every possible success.

We also observe that additional capital has been introduced into this city, in the form of the British and American Exchange Banking Corporation, limited, with a capital of five millions of dollars. The institution is to be under the management of William Wood, Esq., a well-known banker of this city, of the firm, we believe, of Wood & Dennistoun, and a thoroughly accomplished financier. He is to be assisted by two other gentlemen, John Gallop and J. W. Cross, Esquires. The commercial agents, those who are to have immediate charge of ist consignments, and the details of the disposal of them, are the well-known house of Howland & Aspinwall. The connections of this new institution are of the highest order and widest range, and its establishment is of decided advantage to the city of New York.

The following quotations of sales of Railway and other securities are in addition to those given elsewhere in our columns:—

Railway Register.

We have received from E. B. Ivatts, Esq., London, three numbers of the Railway Register, a new journal printed for private circulation among the large numbers of persons who are employees of the British Railway Companies, forming in fact a staff of many thousands. Its object appears to be to offer to all who desire the information, a knowledge of the routine of Railway work, and to introduce improvements into the system as fast as they can be discovered. We beg to acknowledge also the receipt of Mr. Ivatt's accompanying letter, and shall endeavor to co-operate with him as far as practicable in his well intended designs.

Scientific American Patent Office.

We call the attention of our readers to the advertisement of Messrs. Munn and Co., in another column, which is a readable and instructive article of itself. The inventors of this Country are under the greatest obligations to these gentlemen for the valuable services they have rendered for the last twenty years, and continue to render; and the public, for the immense improvements in the practical arts and sciences which have been brought forward and perfected under their care.

Vermont and Massachusetts Railroad.

The plan of the Vermont and Massachusetts Railroad Company for the extension of their Bonds, which become due July 1, 1865, for the term of eighteen years thereafter, and of furnishing interest coupons therefor, has been successfully carried out. The stockholders at a meeting in the spring advised the Directors to do this if they should deem it expedient.

The Directors adopted a plan, and in June advertised to extend all presented before August 1, and which period was extended to August 16. $507,300 of the Bonds have been presented and extended, receiving the new coupons. By the terms of the agreement between the Trustees, the Bondholders and Directors, the Company were at liberty to extend $700,000. As the assets on hand and the earnings will exceed the amount of unextended Bonds, it is doubtful whether the Company will extend any more. Whether the subject has been before the Directors we are not aware, but we see by their advertisement in the Boston *Journal* that the Company expressly reserve "the right to pay at maturity, and not to extend any Bonds not presented for extension" within the time limited, which has now expired. Par is offered at the Board for the unextended and 103 for the extended Bonds.

The Boston Brokers' Board.

The author of "Revelations of a Stock Broker" in the *Commercial Bulletin* pays the following compliment to the Boston Brokers' Board:—

"The membership of the Stock Exchange is a patent of integrity, honor and high credit that is not lightly to be won, and is justly considered in State street as carrying with it a certificate of character such as is worn by none but the most worthy. It stamps a man with the assurance of that full confidence which is the basis and life of all commercial transactions.

The Board examines each broker, and when it puts its seal upon him, it says to the world that it may entrust thousands and millions of dollars with him upon his mere word—that it may place in his hands untold money without security or acknowledgement—that it may transfer to him any quantity of stock to be sold "at market price," without fear of being cut into even for a sixteenth of one per cent.—that it may do (and it every day does) a hundred acts of such extreme confidence that in any other line of business would be considered as sheer madness. It throws its agis of unsullied probity over its member, not only for the present period, but keeps watch and ward over him for the future, and visits upon him the slightest dereliction of faith or duty with unrelenting and vigorous judgment. And for this reason is it that the community place their trusts unreservedly in the hands of men whom they know not to be "responsible" in property, but "responsible" in character, simply because they are "members of the Brokers' Board."

Sewing Machines.

In 1853, there were 2,509 sewing machines sold in America. In 1859, the sales reached 46,243. The annual saving to the United States in labor alone is computed at £29,000,000; that is to say, this extra amount must have been paid, if the same amount of clothing had been produced by manual work.

Oswego Railroad Extension.

The Oswego *Times* says that the Oswego and Syracuse Railroad Company have determined to arrange their road to admit cars of the wide gauge, and also that they intend to appropriate West Second street in Oswego to the purpose of running their cars down to the harbor to deposit their coal, etc.

Atlantic and Great Western Railroad.

The office of the Auditor and Treasurer of this Company has been removed to Meadville, Pa. All letters, reports and communications of every kind intended for the Auditor and Treasurer will be addressed to them at that place.

Railroad Employees--Their Legal Rights.

BRAKEMEN—THEIR RELATIONS TO THE COMPANY AND TO THEIR FELLOW WORKMEN. DUTY OF COMPANIES IN THE USE OF PROPER BRAKES—THEIR RESPONSIBILITY FOR THE SAFETY OF THEIR SERVANTS.

This was an action brought by the administratrix of one Samuel Webb against the Columbus and Xenia Railroad Company and the Little Miami Railroad Company, to recover damages for injuries received by Webb while in the employment of the defendants as brakeman. The action was brought in the Superior Court of Franklin County, Ohio, under the act of March 25, 1851, "requiring compensation for causing death by wrongful act, neglect or default."

The petition stated the cause of action to be in substance, this—that while Webb was in the service of the defendants, in the capacity of brakeman on one of their trains of cars, *en route* from Cincinnati to Columbus, on the 4th of July, 1858, as the train was nearing the Branch Creek station where it was to stop, he, at the usual signal of the engineer for that purpose, attempted to wind up one of the brakes on the cars to check the speed of the train, and that in doing so the brake chain parted and the brake gave way, and he was thereby thrown between the cars and run over by the train, and so injured that he died the same day. That all this was the result of the carelessness of the defendants in providing and using a defective brake and chain, and in no wise attributable to any fault or want of care on the part of Webb.

The defence was, in substance, that Webb assumed the position of brakeman, well knowing its dangers'; that the defendants provided for him the best safe guards against accidents in the management of brakes, that scientific knowledge on the subject afforded; that the brake and chain which gave way were perfect and sufficient, so far as human foresight and examination could determine; and that the parting of the chain was an unavoidable occurrence incident to the business; that Webb's death was the result of his own careless and reckless way of working his brake.

At the trial, evidence was given showing that Webb was, at the time of the accident, in the discharge of his duty and worked his brake in the usual manner; that the brake itself and the

brake chain had been tested and examined and pronounced good before leaving the car shop.

A verdict was rendered for the plaintiff for $5,000. The defendant then appealed to the Ohio Supreme Court, and asked a reversal of the judgment, on the ground of error in the charge of the judge, and in refusing to charge as requested. The Supreme Court now reverse the judgment. The following is the closing remarks of the Court, in the opinion delivered at the decision of the case:

SUTLIFF, C. J.—But it is insisted, for reasons peculiar to the case itself, that in the case at bar there was the same extraordinary care due the employee, the brakeman, in regard to the perfection of the machinery on the train, that was due from the company to the passengers on the train.

The company it is admitted, are as common carriers, bound to furnish the most perfect machinery and cars for the safety of the passengers; and from this fact the conclusion is sought to be gained, by argument, that quite a different rule should be applicable to the employee in this case from that where the machinery, scaffold or ladder was only for the purpose of facilitating the labors of the employee. The brakeman it is said, engaged to the company as an employee in the particular business of brakeman on a passenger train. And the contract being in relation to service in that particular place, and each party being presumed in law to know the law, it must be supposed that both the parties knew that it was the legal duty of the company, as common carrier, to furnish as perfect machinery and brakes upon the passenger cars as practicable; or in other words, to use the highest degree of care in that regard to insure the safety of the passengers, of which the company were in law to be regarded to some extent warrantors. And, therefore, when the employee entered the service as brakeman, to work one of the brakes on such passenger cars, it was reasonably to be implied that the company would furnish such brake to be by him worked as the law made it the duty of the company to furnish upon a passenger car for the safety of the passengers. It is not easy to see at first view the fallacy of this argument; and if admitted to be strictly logical, the conclusion would seem inevitably to follow that the employee was entitled, in his capacity of brakeman, to as perfect a brake as a passenger, to whom the general rule required of the company extraordinary care, instead of merely that ordinary care which was due to an employee.

But this argument and the conclusion to which it tends must necessarily be qualified by the duty of the employee himself, to bring to the discharge of his office as brakeman that high degree of vigilance, prudence, care and promptitude, correspondent to the undertaking of the company as common carrier, which he as one of the operatives had undertaken with the others to discharge.

There is still another consideration which must necessarily qualify the right of such employee to claim as due from the company a perfect brake. It appears from the record that the service of the intestate was rendered in common with many other servants, in the business of operating the trains upon the road; and it also appears that it was the duty of certain of the servants so engaged in the common service to inspect the chains of the brakes and see to the condition of the machinery, etc., and take care that the train should in all respects be in a road worthy condition. If, then, the defect of the chain was owing to the neglect of the co-servant of the deceased, whose duty it was to inspect the chain at the time; for such neglect the railroad company could not be held chargeable.

It is not necessary here to determine, by strict reference to attempted classification, what degree of negligence, whether slight, ordinary or gross, must be shown on the part of the defendants below, in order to constitute in this case a legal liability against them. However ingenious the argument, the conclusion cannot be logically arrived at, that the employee upon a railroad passenger train, engaged in operating the train is entitled to the same care for his safety from his employer that is due to a passenger upon the train. A person who seeks and engages in any employment, thereby assumes upon himself the ordinary risk, hazard, and danger incident to the place and the duties which, for the consideration agreed upon, he has so agreed to fill and discharge. And this is equally true of employees upon railroad trains as well as elsewhere, and in all other kinds of business and positions. Whether the employee seek employment in a machine shop, or on board a steamboat, upon a railroad train, or to pilot rafts over dangerous rapids, to labor in a powder mill, or to serve upon a whale ship, or upon a voyage of discovery in the Arctic regions; in each and all of the several employments and positions chosen, the employee, by entering the service voluntarily, takes upon himself the hazards and dangers properly incident to the service in which he engages; and the employer is in no sense, from the relation they so sustain to each other a warrantor of the safety of the employee. There is neither authority nor reason for holding the employer responsible for the safety of his servant or employee, in the same sense that a common carrier is, by law and public policy, regarded as having guaranteed. * * *

Indeed, negligence is a term depending so entirely upon the facts and circumstances of each particular case, that very little practical advantage is derived from the common classification, slight, ordinary and gross. The same degree of care that would have been highly creditable to common carriers, in seeing to a common stage coach being in suitable repair and road worthiness, for the safety of the passengers and that of their employee, the driver, before the introduction of railroad facilities, might doubtless be regarded as most culpable negligence of duty, on the part of a railroad company in regard to the condition of their passenger trains; not only toward passengers, but even toward their employees who operate the train. And so, too, it may safely be affirmed, a reasonable care for the safety of the employee, which requires of the employer always an attention, in a measure, commensurate to his exposure to danger, for the reasonable protection and safety of the employee, would evidently require of the employer greater vigilance and care in regard to the road worthiness of an express train, or even a common passenger train, than of a freight train. Indeed, the care that the law requires for the safety of the employee, is that care which is regarded by the good common sense of mankind, as reasonably due under all the circumstances of the case.

It is hardly necessary or practicable, to state the degree of care due from the company in this case to the brakeman. It can only be correctly expressed by saying, that it was incumbent upon the company to use all that care and precaution for the safety of the brakeman, that might reasonably be expected of a railroad company on the part of an intelligent brakeman acquainted with the care and precaution used by other well conducted railroad companies in like cases.

Judgment reversed.

Naugatuck Railroad.

This road is 57 miles in length, extending from Winsted, Conn., to Naugatuck Junction, from which point to Bridgeport, about 5 miles, the trains are run over the New York and New Haven Railroad. The Naugatuck Railroad Company was chartered in May, 1845, and organized in February, 1848. The road was completed as follhws: from the Junction to Seymour, 15 miles, on the 15th of May; to Waterbury, 28 miles, on the 11th of June, and to Winsted, 57 miles, on the 24th of September, 1849. Capital stock authorized, $1,500,000; paid in, $1,031,800. Funded debt, $358,050, viz: mortgage 7 per cent. coupon bonds, $350,000 dated July 10, 1856, and payable July 10, 1876, interest January 10th, and July 10th, at Bridgeport. State Law 7 per cent. bonds, $8,000, issued in 1853–'54, and payable in 1863–'64, interest semi-annually. Mortgage 7 per cent. bond of 1848, past due, $50.

The receipts and expenses of the road for the years ending December 31, 1861 and 1862, have been as follows:

Receipts:	1861.	1862.
From freight	$102,866 49	$123,845 81

The office of the company is at Bridgeport, Conn. The officers and directors for 1863 are as follows:

President.—Wm. D. Bishop.

Vice President.—A. L. Dennis.

Directors.—A. Heaton, A. L. Dennis, E. F. Bishop, Green Kendrick, P. C. Calhoun, R. Tomlinson, W. D. Bishop.

Treasurer.—Horace Nichols.

Secretary.—Ira Sherman.

Superintendent.—Charles Waterbury.

The Pennsylvania Canal.

Winding its way along the strand, where the laughing Juniata sings with merry voice, to the glens of inland Pennsylvania, and where the broader Susquehanna rolls its sluggish current to the sea, is the greatest artery of the internal commerce of the State of coal and iron—the Pennsylvania Canal. Commencing in the mountain gorges of Hollidaysburg, for one hundred and twenty-seven miles the canal bed follows the Juniata river, and turns into the Susquehanna, where the two streams meet at Junction. For forty-six miles the canal then follows the Susquehanna, and terminates at the village of Columbia, where large and costly granite outlet locks are constructed to permit the passage of boats into the river, and to admit them into the canal.

The advantages of this great business channel are great. Its arterial branches penetrate the entire northern central portion of the State, and affords the country bordering on the Chesapeake a constant and sure supply of coal and lumber. From the unbroken pine forests of the West Branch of the Susquehanna, the canal stations at Lock Haven, Pine Creek, and Williamsport, send immense quantities of boards down the canal, to be delivered at Columbia, Baltimore, Port Deposit, or to be brought through the Peninsula Canal to the Delaware River, and thence to Wilmington and Chester. Nor is Philadelphia entirely independent of the great lumber regions of the West Susquehanna. Large cargoes are daily arriving there from the localities already referred to, by the way of the Union Canal, to which egress is given at Middletown, ten miles below Harrisburg, and which connects with the Schuylkill Navigation Canal at Reading, from which place the boats pass to the city. Further east, on the Eastern Branch of the Susquehanna, lie the coal-fields of Wilkesbarre, Pittston, Plymouth and Nanticoke. Nearer the Juniata are the coal veins of Danville and Northumberland, and nearer yet, the fertile leads of Sunbury and Millersburg. What a wealth of treasured richness do their depths contain—whither the darkened caverns of the hollow mines are jewels far surpassing those that opened to Aladdin's vision when he paced the flowery meads of the enchanted garden—and the shaping hands of the morling miners bring them forth and send them down the freighted waters, to carry gladness and cheer to many a hundred household. The North and West Branch and the Susquehanna canals all bear their boats to Junction, where they enter the main line of the Pennsylvania Canal, and are then conducted to Columbia. From this point the Tidewater Canal commences, on the western side of the Susquehanna, and thence the coal is transported to the cities and villages on the upper shores of the Chesapeake to Port Deposit, Havre de Grace and Baltimore.

Little grain is derived from the canals communicating with the Pennsylvania. The agricultural freightage is procured on its Juniata Division. The canal passes through the richest portion of the State, originating in the coal fields of the Alleghenies; descending through the eastern ridges of that range it reaches Huntingdon, where the bituminous resources of the Broad Top section are poured upon its waters; then through the picturesque scenery of the Juniata the canal passes until it reaches the termination of the Ksshicoquillas Valley, at Mill Creek, where the products of the adjacent grain fields are shipped to market; then past the granaries of McVeytown and Lewistown, and the luxuriant pasture plains of Newport, the Juniata Division of the Pennsylvania Canal sweeps onward to the bosom of the Susquehanna. Collection offices are established at the two termini, Columbia and Hollidaysburg, and at intermediate stations, at Middletown, Harrisburg, Clark's Ferry, Junction, Lewistown and Huntingdon. The largest and most important office is at Harrisburg, where about fifteen hundred boats are cleared monthly, and the next in importance is Columbia, which passes almost as many boats as Harrisburg.

The boats used on the Susquehanna carry about two hundred and twenty-five thousand pounds of lading. Those on the Juniata rarely reach one hundred and fifty thousand. The Pennsylvania Railroad, however, in whose hands the canal is at present, are extending the locks along the Juniata and doubling them on the Susquehanna, so as to allow of the passage of boats with heavier cargoes.

The canal on the western side of the Alleghenies is insignificant and unprofitable. It formerly extended one hundred and three miles from Johnstown to Pittsburg, but on the first of May the upper western division of thirty miles, from Johnstown to Blairsville, was abandoned. There are now but seventy-three miles of communication from Blairsville to Pittsburg. There are three collection offices, one at each terminus, and at Freeport, forty-five miles below Blairsville. The depth of this canal is but shallow, and the trade is merely local. Thomas T. Warner, Esq., is the General Canal Superintendent, having the management of the entire line, with A. J. Whitney, William T. Burns and John Runk, Jr., as assistants on the Eastern Division, and D. C. Salsbury on the Western.

New York City Railroads.

We subjoin the following interesting particulars in regard to the railroads of New York now in operation and in course of construction:

HARLEM RAILROAD.

The city track of this road extends from the lower end of the Park to the tunnel, the upper depot being at Twenty-seventh street, and passes through Chatham, Centre, Broome, and Grand streets, Bowery and Fourth avenue. According to the report of the State Engineer and Surveyor for the year ending Sept. 30, 1862, this road has 42 city cars. The number of passengers carried therein was 3,530,227. The city track is about two miles and a half in length.

SECOND AVENUE RAILROAD.

Length of road (double tracks), 8 miles; number of passengers carried, 4,771,119; number of cars not stated. This road passes through South, Oliver, Pearl and Chatham streets, Bowery, Christie street, First and Second avenues to Harlem River.

THIRD AVENUE RAILROAD.

Length of road 8 miles; number of first class passenger cars 109; number of miles run by passenger cars about 2,000,000; number of passengers (all classes) carried in cars, 11,432,392; average rate of speed adopted by ordinary passenger cars, including stops, 5½ miles per hour; rate of speed of same when in motion, 6 miles an hour; average weight, in tons, of cars, 2¾; rate of fare for passengers beyond Sixty-fifth street, 6 cents; below Sixty-fifth street, 5 cents; route, Chatham street, Bowery, and Third avenue to Harlem River.

SIXTH AVENUE RAILROAD.

Length of road, 4 miles; number of two-horse cars, 59; number of one-horse cars, 30; number of horses, 503; number of miles run by regular passenger cars, 1,891,960; number of passengers (all classes) carried in cars, 6,955,647; average rate of speed, including stops, 4½ miles per hour; average weight of large cars, 4,500 pounds; small cars, 2,000 pounds; rate of fare, 5 cents, and for children 3 cents; route Vesey, Church, and Chambers streets, College Place, West Broadway, Canal, Varick and Carmine streets, and Sixth avenue to Central Park.

EIGHTH AVENUE RAILROAD.

Length of road, 10 miles; number of passengers (all classes) carried in cars, 7,899,696; number of cars and horses not stated; route, Vesey, Church and Chambers streets, College place, West Broadway, Canal and Houston streets, and Eighth avenue to Central Park.

NINTH AVENUE RAILROAD.

Length of road, 13 miles; length of road laid, 5 miles; number of first class passenger cars, 42; average rate of speed, 5 miles; number of miles run, 779,880; number of passengers (all classes) carried in cars, 1,789,963. On the 30th of July, 1859, the interest of this road, which was then built and in operation from Canal street to 54th street (and which had been constructed by private enterprise,) together with cars, horses, stations, stables, and all the property grants, licenses and privileges appertaining thereto, was acquired from the ten proprietors at the rate of $712,445 85 for the whole, including, however, in such estimate of the whole property, real estate deemed worth $328,485 85. This company has expended $75,000 in extending the road. Route, 54th street, Ninth avenue, Greenwich street, Canal street, West Broadway, College place, and Barclay street.

BELT RAILROAD.

This immense road is in operation on the west side of the town, and partially built on the east side. When fully completed it will girdle the city. The route, commencing at the intersection of Tenth avenue and Fifty-ninth street, lies through the Tenth avenue, West Twelfth street, Greenwich street, West street, Battery place, State street, Whitehall street, Bowling Green, Chambers street, Hudson street, on the West side; and on the east side, from the intersection of the Tenth

avenue and Fifty-ninth street, through Fifty-ninth street, First avenue, Twenty-third street, Avenue A, Fourteenth street, Avenue D, Houston street, Goerck street, Mangin street, Corlaers street, Grand street, Monroe street, Jackson street, South street, Montgomery street, Front street, Old slip, Water street, Coenties slip, Old slip and Front street to Whitehall street.

AVENUE D RAILROAD.

The route of this road when completed, will be through the following streets and avenues: commencing on Avenue D at the northern extremity of the same, through Avenue D, Eighth street, Lewis street, Grand street, East Broadway, Chatham square, Chatham street, Park Row to Broadway; also, from the corner of Avenue D and Eighth street to and through Houston street, Goerck street, Grand street ferry, Clinton street, Avenue B, Tenth and Eleventh streets to Avenue D; also connecting with double track in Canal street, at Broadway, thence through Lispenard street, West Broadway, Beach street, Greenwich street, North Moore street, Walker street, Washington street to Battery place; also connecting with the double track in Avenue D, through Fourteenth street and First avenue to Thirty-fourth street, thence to Avenue A. This road has been commenced, and a portion of it is completed; yet, some time will elapse before it will begin active operations.

SEVENTH AVENUE RAILROAD.

The route of this road lies through Seventh avenue from the southern extremity of the Central Park, old Bloomingdale Road or Broadway, University-place, Clinton-place, Varick street, Wooster street, Canal street, West Broadway, Franklin street, Duane street, College-place, Barclay street, Church street, Greene street, Macdougal street, Fourth street, Thompson street, and Broome street. At Fourteenth street and other points the track will be extended to Broadway. This road is entirely completed, and is in operation above Broome street, but below that point the company have been restrained by the Sixth Avenue Railroad Company from running over any portion of their track. The Seventh avenue Company have put in a statutory plea, and the proceedings have advanced so far that commissioners will be appointed by the Court to assess the value or rent to be paid by the Seventh Avenue Company for the use of the track of the Sixth Avenue.

FOURTEENTH STREET RAILROAD.

The route of this road lies through the following streets, commencing at the Eleventh avenue: Fourteenth street, Hudson street, Troy street, Fourth street, Macdougal street, Bleecker street, Crosby street, Howard street, Elm street, Leonard street, Reade street, Centre street, Chatham street, Park Row, Beekman street, Ann street, William street, Fulton street, South street, Fulton Ferry, Water street, Peck slip; also from Fourteenth street through and along the Eleventh and Twelfth avenues to Thirty-second street. The construction of this road has just been commenced, and on Sunday morning last ground was broken in Fulton street. It is doubtful whether it will be operated, however, before next Spring.

TENTH AVENUE AND THIRTY-SECOND STREET RAILROAD.

The route of this road lies through the following streets, commencing at the ferry at the Western extremity of Forty-second street: thence through Forty-second street, with a double track to Tenth avenue; thence through Tenth avenue, with a double track to Thirty-fourth street; thence through Thirty-fourth street, with a double track to Broadway; thence through Broadway to Twenty-third street; thence through Twenty-third street to Fourth avenue; thence through Fourth avenue and Union-place, with double track to Fourteenth street; thence through Fourteenth street, Avenue A, Second street, and First street, Houston street, Cannon street, Grand street, Goerck street; thence returning to Goerck street, Houston street, Second street, and to connect with double track in Avenue A; and thence along the aforesaid route to the place of beginning.

The road is all built, excepting on the Fourth avenue, the Harlem Railroad Company claiming the right of way on said avenue, and having enjoined the Seventh Avenue Company from laying their track. The Seventh Avenue Company has its cars in readiness and other arrangements made for commencing operations as soon as the suit brought by the Harlem Company is disposed of. They are about building stables at the foot of Forty-second street, N. R.

RAILROAD IRON.

300 TONS now on the voyage to this port. For sale by

PERKINS & LIVINGSTON,

MUNN & CO'S PATENT OFFICE.

ESTABLISHED 1842.

DURING the past twenty years, Messrs. MUNN & Co. in connection with the publication of the WEEKLY ILLUSTRATED SCIENTIFIC AMERICAN, (the only paper devoted to the Mechanic Arts in the country,) have acted as Attorneys for procuring letters patent in the United States and all foreign countries.

They would state that they have acted, during this period, as agents for more than

TWENTY THOUSAND INVENTORS!

In fact, they have become identified with the whole brotherhood of inventors and patentees, at home and abroad. Thousands of inventors for whom they have taken patents have addressed to them most flattering testimonials; and the wealth that has inured to the inventors whose patents were secured through their office, and afterward illustrated in the SCIENTIFIC AMERICAN, would amount to many millions of dollars!

Messrs. MUNN & Co. are prepared to attend to patent business of all kinds, in the quickest time and on the most liberal terms.

For further information, send for a pamphlet which contains the Patent Laws of the United States, and much other valuable information of importance to inventors and all others who own patent property. Also pamphlets of information furnished regarding the Patent Laws of all foreign countries.

For further particulars address

MUNN & CO.,
No. 37 Park Row, New York,

Or **corner F and 7th sts., opposite Patent Office, Washington, D. C.** 3m35

PROPOSALS FOR CONSTRUCTING A BRICK TUNNEL UNDER LAKE MICHIGAN, TWO MILES LONG, FOR THE CITY OF CHICAGO.

OFFICE OF THE BOARD OF PUBLIC WORKS,
CHICAGO, August 13th, 1863.

Sealed Proposals will be received at this office till Wednesday, September 9th, at 11 o'clock A. M., at which time the Board will open the same, for doing all the work and furnishing all the materials required for the construction of a brick tunnel, five feet clear diameter, and extending from the present pumping works of the city, two miles out, under the bed of Lake Michigan, and through what numerous borings invariably show to a stiff blue clay soil, together with land and lake shafts, and protecting cribs, in accordance with the plans and specifications for the doing of said work, to be found on file in the office of this Board on and after the 19th inst.

The Board would prefer to let the entire work to one contractor or company, but will receive separate proposals for the tunnel proper and land shaft, for the protecting cribs, and for the cast iron cylinders for lake shafts.

The Board reserves the right to reject any or all bids, and to accept any one bid complying with the conditions of this advertisement.

The bids must be sealed, and must be accompanied with a bond of the penal amount of $200, blanks for which will accompany the specifications, guaranteeing the execution of a contract in accordance with the bid, in case the bid is accepted.

Proposals must be directed to the Board of Public Works, and indorsed "Proposals for Lake Tunnel."

Satisfactory security for the faithful performance of the work will be required of the parties whose bids may be accepted.

J. G. GINDELE,
FRED. LETZ,
F. C. SHERMAN,
Board of Public Works.

3t34

NEW YORK CENTRAL RAILROAD CO.

TREASURER'S OFFICE, ALBANY, Aug. 14, 1863.

SEALED proposals will be received by this Company until 3 o'clock in the afternoon of the 10th day of SEPTEMBER next, for the purchase of its Coupon Bonds (of $1,000 each) to the amount of ONE MILLION OF DOLLARS, (to meet, in part, the debt of Three Millions of Dollars which will become due on the 15th day of June next) bearing interest at the rate of SIX PER CENT. per annum, payable semi-annually, in the City of New York, on the 15th day of June, and the 15th day of December in each year, and the principal payable on the 15th day of December, in the year 1887.

Proposals indorsed, "Proposals for Six Per Cent. Bonds," may be addressed to the undersigned at this office, or at the Bank of Commerce, in New York, and may be for any amount not less than $5,000.

The Directors reserve the right to reject any proposal and no conditional bid will be received.

A deposit of five per cent. on the amount must accompany each proposal. In the case of rejected bids this deposit will be returned without delay, and in the case of accepted bids, interest will be allowed thereon at the rate of six per cent. per annum from the 10th day of September until the 1st day of October next, when the Bonds will be ready for delivery, on payment of the balance of ninety-five per cent. In case of failure to pay such balance, the deposit of five per cent. will be absolutely forfeited to the Company. The first Coupon will be for the amount of interest ($12 50) to accrue from the 1st day of October to the 15th day of December next.

A sinking fund of two per cent. per annum on the amount of the loan will be applied to its reduction, or to providing means for its payment, in such manner and under such regulations as the Directors may from time to time adopt.

☞ T. M. TYNG, Esq., 61 Cedar st., has for sale two Locomotives, one 16 and the other 12 tons, each of the ordinary gauge. They are in first-rate order, will be sold low, and are ready for immediate delivery. Also a new first class Passenger Engine, 28 tons, finished in the very best style.

Passenger Car Lamps.

Messrs. WILLIAMS & PAGE, 67 Water st., Boston, advertise in another column, Lamps for Passenger Cars, adapted to the use of Kerosene or Coal Oils. The lamps are neat, ornamental and durable; the light strong and brilliant; defects which attend the use of other lamps are avoided; and they are as easily taken care of as any in use. They are furnished to suit high roofs, as well as those cars of the old construction. They are already in use on a large number of roads. For further information, and a full-sized drawing, address Messrs. WILLIAMS & PAGE, Boston, Mass.

Atlantic and Great Western Railway.

The Springfield (Ohio) *Republican* states that the engineers of this road are now operating in that vicinity.

Ship Canal between the St. Lawrence and the Hudson.

As is well known to our readers, the most persistent efforts have been made within the last year to turn the Erie Canal into a ship canal; applications to our own state Legislature, and to Congress, have been made, and a still more powerful attempt to bring the project to a successful termination attempted at Chicago, in a convention, at which the co-operation of the North Western and Western States was expected to be secured. It is not our purpose at this time, to show what were the real objects of those who set this scheme on foot, covered up by a desire to secure our naval supremacy on the lakes in case of a war with England, nor what amount of money was paid to the agitators of this project for their invaluable services. We have again and again shown in the columns of this JOURNAL, as others have done elsewhere, that the gunboats which could pass through the enlarged canal would be unfit for service on the Lakes.

Next that the destruction of a single aqueduct by a secret enemy, either across the Mohawk, below Schenectady, or on the Schoharie creek, would completely prevent the proposed Monitors from reaching their destination. Also that there are numerous convenient points in proximity with all our lakes, where the largest class of Monitors might be advantageously and economically constructed, without any violation of the supplementary treaty of Cyhent.

We have also shown that to reconstruct the Erie Canal would be to interrupt, if not destroy its navigation for several years; and deprive our State of the revenue of from four to five millions it is now receiving from it; that the cost of construction would be from fifteen to twenty millions, a burthen the people are not at present able to bear, nor is it likely they will be for a long time to come. We have also demonstrated that long ship canals have been proved to be failures, since they are not adapted to the use of square rigged vessels or steamers for many obvious reasons; that five canal boats moving at the rate of three miles per hour, of 200 tons burthen each, can transport more cheaply and rapidly through a canal than a single vessel of 1000 tons, and above all, the proposed Erie Ship Canal would leave Lake Ontario, and the American shores of the St. Lawrence entirely out of all chance of competition with the upper lakes, although the country washed by these waters would be compelled to contribute their full share to a measure which might be their ruin; and finally we have shown, that distances being the same or not the same, an unshackled lake and river navigation is cheaper and better for the producer and consumer than an artifical navigation subject to lockage, tolls and breakages. Is there a sane person who believes that a canal along side of the Hudson, would take away the business of that river? Or that it could compete with it for its traffic.

On the same principle, a canal from Chicago to Buffalo could not sustain itself, against the free navigation of the upper Lakes, Michigan, Huron and Erie.

Short Ship Canals connecting navigable streams or lakes may have merit, though not always found equal to the expectations of their projectors. The Russian Canals, the French, and the English are but barge canals at the best, and even the great Caledonian, originally designed to avoid a ship navigation around the North of Scotland, and adapted to the size of a 32 gun frigate, has been almost entirely abandoned, and its revenue does not exceed $15,000 per annum, a sum totally inadequate even to its repairs. Experience as well as theory is against the construction of long and deep artificial channels of navigation, and especially are these unnecessary when Nature has given us splendid rivers and lakes, that can be connected with short cuts, and which create but moderate interruptions to a larger and free navigation. With these views, and fully estimating the vast productive powers of the Western and North Western States, admitting the necessity of having further cheap outlets for their surplus cereals, and other natural products, recognizing that insatiable spirit of progress and improvement which pervades this country, and which is to be cherished to the utmost point of practicability, we have the opinion, by no means original with us, that to meet all these requirements of trade and commerce on the one hand, and of public opinion on the other, a ship canal may be easily constructed which shall unite the waters of the Lakes with those of the Hudson, and open a route of navigation which no pressure of

Western production can ever choke up or overflow. If the capacity of the Erie Canal is equal practically to fifteen railways like the Central, it is certainly very apparent that the lakes, the St. Lawrence river and Lake Champlain, united by short ship canals, will be more than equal to a thousand railways, in the capacity for transportation. And on this noble route of more than one thousand miles in extent, the canals necessary to make it perfect, would not be one-tenth of the whole length, and on this alone would any tolls be chargeable. On the Erie enlarged, tolls would be paid for 352 miles. This statement assumes the shape of demonstration, as to which is the best route, and which it should be our immediate policy to select. To bring a steamer or brig from Lake Superior or Michigan to the city of New York, of the tonnage now most usually preferred on the lakes, say from four to five hundred tons for steamers, and about half that for sailing vessels of the best class, there is nothing now necessary to be executed but the widening of two canals, with a very few locks, of small lifts; to wit the Chamblee and the Champlain. And this has been the opinion of the wisest men in the Canadas, as well as the United States for many years past.

In 1849 a convention was held at Saratoga to consider this very subject, and if we are not mistaken met principally at the suggestion of the Montreal Board of Works of which Thomas Ryan, Esq., was then President. In a report made by him and read and considered at that convention, it was stated that besides avoiding the transhipment between the lakes and New York, it would open a large reciprocal trade between it and the Canadas, Newfoundland and Labrador.

In 1852 the subject was brought to the notice of Congress by the then Secretary of the Treasury Thos. Corwin, and at the same it was receiving the attention of the Canadian Government, and the particular care of the Hon. John Young, one of the greatest benefactors of Canada, and still living as we are happy to learn, in a green old age. The Canadians at that time seemed anxious to get ship navigation into Lake Champlain if no farther, in which case Whitehall in this State instead of being an inconsiderable village, would have been at the head of the great Lake navigation, and might have rivalled Cleveland, Buffalo or Oswego. Mr. Young was anxious that Canada should enlarge her Chamblee Canal also, because it would lead to a corresponding improvement in the Champlain Canal, and he asserted that in such a case, the voyage between tide water in the Hudson and Lake Erie at Buffalo could easily be made upwards in five days, and downward in four.

Within the last year, the leading minds of Canada, both in Parliament, and the Montreal Board of Trade, have recurred to this subject with a marked interest, as is evident from various reports of Committees which have been given to the press, and commented upon by this JOURNAL, though without awakening the attention it deserved, but which they will be sure to excite at a favorable moment.

Much additional light has been thrown upon it by the recent reports of our late Engineer on the Canals of the State, and the estimates of enlarging them for the military purpose of defense of the Lakes. We are again indebted to S. H. Sweet, Esq., Deputy State Engineer and Surveyor, for sundry valuable documents emanating from the Canal department, illustrated by new, correct, and well executed maps, and accompanied by legislative reports. It is very evident that our State Engineers are men competent not only to take good care of our present canals, but are equal to any future work of which these are to be a component part.

The first step and the least one to be taken is to improve the navigation of the Canal of Chamblee, which connects the St. Lawrence near Montreal with the Richelieu river below St. Johns at a place called the Chambly basin. It is 11½ miles in length by 24 feet in width; the depth of water is 8 feet, and the lockage is 74 feet.

The Champlain Canal, which as the second step, would require enlargement, is 66 miles in length, with 20 locks of moderate lift. Seven locks lift the boats 54 feet from the lake to the summit level, and thirteen let them down 125 to the Hudson.

In 1862 a committee of the Senate of this State being appointed for that purpose, reported favorably on a bill to provide among other things, for the enlargement of the Champlain Canal, so as to admit the passage of gunboats and vessels of war. It was based upon a report of W. B. Taylor, State Engineer and Surveyor, in which the following facts were stated. We quote them substantially as follows:

"The original size of the Champlain Canal prism, was 28 feet bottom and 4 feet depth. In 1860 the Legislature authorized the canal to be widened to 35 feet on the bottom, and the depth of water to be increased to five feet. Lake Champlain is 125 miles long from Whitehall to St. Johns, and from one to fourteen miles wide. Its waters flow into and join the St. Lawrence at Sorel 57 miles from St. John's. The Chamblee Canal 12 miles long intersects the Richelieu river 33 miles above its outlet, admitting the passage of vessels of 350 to 400 tons drawing 6½ feet water. From Montreal by improvements around the rapids of the St. Lawrence there is an unbroken navigation to the upper lakes, so that certain kinds of vessels not over 120 feet long and 23 wide, may even now load at Chicago and unload at Whitehall. The Canadian Canals along the St. Lawrence from Montreal to Ogdensburgh are about 41 miles in length, and will pass vessels of from 500 to 600 tons drawing 8 feet of water. All the locks are 200 feet long, 50 wide and 9 feet deep."

The Welland Canal uniting the waters of Lakes Erie and Ontario is 28 miles long, with 31 locks, 150 feet in length by 62½ feet wide, and will readily pass vessels of 500 tons burthen.

The cost of enlarging the Champlain Canal, or rather enlarging the locks so as to pass a boat 150 feet long and 25 wide, as estimated by Mr. Taylor, and appended to this report is $3,770,190.

We thus may safely calculate that to alter the Chamblee locks to the same size would be in the proportion of 12 to 66 miles. If then the cost of reconstruction of the Champlain would be in round numbers $58,000 per mile, the whole cost of the reconstruction of the Chamblee might be safely estimated at about $700,000. For this sum therefore the propellers of Chicago could without shifting a barrel of freight unload their cargoes at Whitehall, and if the State of New York would expend four millions, they might unload at the wharves in the City of New York.

We must confess, however, that we do not coincide with Mr. Taylor in his estimates of the expense of enlarging the locks of the Champlain Canal to the capacity stated.

This canal as appears from the official documents, cost but $1,746,062, and is so stated as ascertained in 1863, the prism of the canal having been enlarged from 40×26 .4 to 50×35 .3. We therefore cannot see how the enlargement can be fairly estimated at double the original cost, when so much of the old work will become a part of the new.

We leave this, however, to be decided by the engineers at a future day.

We then sum up the whole subject as one eminently worthy of the attention of the public, worthy of a combined movement in its favor by the cities of New York, Montreal, Albany and Troy. It has been long and thoroughly examined and understood. The State of New York is fully able to meet the expense of that portion of the enlargement which she may undertake. Canada is equally able for the small expenditure she will be called on to make.

It will satisfy all the advocates of ship canals from the lakes, furnish an almost free navigation for large vessels from Chicago to New York, and from all the lake ports eastward, including those on Lake Ontario and the St. Lawrence River. It will also ensure a large portion of the Canadian trade, and that to arise from the construction of the Ottawa Canal, and create a friendly feeling in that quarter which will one day help the *gravitation* alluded to on both sides the St. Lawrence, and add great reciprocal advantages to those already enjoyed by the United States and the Canadas.

The great West will also have an unshackled outlet for their enormous products, and a choice of two routes to market, instead of one. In short, if we must have a ship canal to please our western friends let us give them this, about which there never can be any opposing interests, since it embraces all.

Nor should it be forgotten that by means of this ship canal, a large portion of the vessels employed in navigating the lakes, and now laid up in winter, could pass through to the Atlantic at the end of the season, and be employed in the coasting or West India trade, or even in European voyages, thus adding to the profits of their owners and the general wealth of the country.

Census of Ireland.

The census of Ireland for 1861, which has just been published in the form of a voluminous blue book of 1196 pages, gives the total number of inhabitants as being 5,798,967, in addition to 26,080 officers and soldiers, 1174 men belonging to the navy, and 2282 in connection with the merchant service. The number are thus apportioned to the provinces:—Leinster, 1,457,635; Munster, 1,513,-558; Ulster, 1,914,236; and Connaught, 913,135. Out of these figures, 2,105,958 can read and write, 1,022,787 read only, and 2,667,090 are incapable of doing either.

Valuation of Providence.

The valuation of the city of Providence is as follows: Real estate, $37,701,000; personal property, $28,714,800; total, $66,415,800—an increase of $5,382,800, since last year. The rate of tax is $6.80 on $1,000.

Dayton and Michigan Railroad.

The earnings and expenses of this road for the years ending March 31, 1862 and 1863, have been as follows:

Earnings:	1862.	1863.
From passengers	$131,912 36	$190,180 58
" freight	217,293 02	430,212 38

General interest & exchange	5,302 41	
	108,605 15	
Leaving a surplus of	$342,935 38	

—or about 51.67 per cent of the gross earnings.

A comparison of the earnings of the past with those of the preceding year show an increase of $263,537 17. The transportation expenses, including renewal account, but exclusive of taxes, have increased only $37,707 32. The net earnings, therefore, show an increase of $225,829 85.

The net revenue has all been applied to paying the debts of the company, for construction, iron, rolling stock, etc., and the reduction of the unpaid interest on its securities; and the company is now, for the first time in its history, in a condition to apply the future earnings of its road to their legitimate purposes, viz: the payment of interest on the money invested in the enterprise.

The entire expenses, including taxes, rent and renewal account, have been $236,633 29, and the actual net revenue of the road for the year, $427,072 26, which is sufficient to pay 7 per cent interest on $3,790,000—the entire debt of the company—and 6 per cent dividend on the capital stock, and leave a handsome surplus. The report says:

In compliance with the terms of contract of lease between this Company and the Cincinnati, Hamilton and Dayton Railroad Company, as approved by the Stockholders of this Company, at a special meeting held on the 14th day of April last, the Directors did, from the first day of May last, transfer the Road with all its Rolling Stock, Depots, Machinery, and fixtures of every kind, to the Cincinnati, Hamilton and Dayton Railroad Company, to work as contemplated in the lease—a copy of which is appended for the convenience of future reference.

The advantages to be derived by this Company in making the lease, were then fully discussed, and need not be recapitulated here. All the sacrifices made to consumate this long projected union of your Road with the Cincinnati, Hamilton and Dayton Railroad, making a line managed by one company, have been borne by the large individual Stock and Bond holders of this Company, who, by the surrender of their stock and the past due coupons on their Bonds, procured the endorsement of the Bonds of this Company by the Cincinnati, Hamilton and Dayton Railroad Company for the prompt payment of the Interest Warrants as they become due in New York City. That endorsement is guaranteed by the Little Miami and Columbus and Xenia Railroad Companies, making the Bonds of this Company a first class security, equal to any Bonds in the country. The permanent union of the two roads, practically into one, makes it the shortest route between Cincinnati and Lake Erie, and the cheapest Freight line to and from Northern and Eastern points, without danger of future rivals.

Now, in transferring the management of the affairs of this Company to their successors, the Directors are gratified, that after years of unremitting attention, under embarrassing circumstances, with limited means, they, by assuming responsibility personally, to a large amount, and by energy and economy in the management, have succeeded in the enterprize which was, at the time they entered upon it, but just commenced, and have finished the Road and placed it among the first class Railroads in the State.

The entire business of the road since it was completed and in full operation is exhibited in the annexed statement.

	Earnings.	Expenses.	Balance.
1861	$375,002 59	$162,895 12	$212,107 47
1862	400,168 37	177,217 53	222,950 84
1863	663,705 55	212,165 02	451,540 53
Total	$1,438,876 51	$552,277 67	$886,598 84

The receipts of the road during the past year, because of the very limited amount of rolling stock were much less than they would otherwise have been. There were in use on the road only 16 engines, four of which were constantly employed in yard duty and on wood trains; 8 passenger cars, and 226 box, stock, and flat cars—which is only about two-thirds of the equipment usually kept upon roads of like length and traffic. The other equipment in use during the year was 5 baggage, 65 gravel, and 31 hand cars. It is difficult to estimate which would have been the earnings of the road during the year had the line been properly equipped: certainly not less than one million of dollars. The engines were taxed entirely beyond their capacity; and yet, by close attention and good management, they were all kept in good working order; and while the mileage of the engines was much greater than the previous year, the cost of repairs was much less. During the past winter there were built in the company's shops at Lima, 44 new freight cars, making the rolling stock now on the road: 16 locomotives; 185 box, 55 stock, 30 flat, 8 passenger, 5 baggage, 65 gravel, 1 boarding, and 23 hand cars, and 9 trucks, all of which, except the gravel cars, are in good order for use. The dock improvements at Toledo were completed during the year. The amount expended upon that work up to the date of the report has been $35,741 59. Want of engines prevented any additional ballasting during the year. It is presumed, under the new management, having ample means, it will be done without loss of time.

When the road was taken off the contractors' hands, in the fall of 1859, $35,000 was deducted from their pay, with which to complete the ballasting north of Lima—of which amount there has been expended in that work, $24,343 04, leaving $10,656 96 yet applicable to ballasting that division.

The road bed and track has been maintained in good working order. 179 new rails have been used, and 34,000 ties purchased. The bridges have all been kept in a safe and reliable condition. The road has therefore been transferred to the new managers, as contemplated in the lease, in good order, and in the free enjoyment of a large and profitable traffic, and friendly relations with all connecting roads; and at the same time possessing the confidence and good will of the community, and of its business patrons generally.

The number of miles run by engines during the year was 414,779—an increase over the previous year of 69,309. Miles run by freight cars, 2,420,781—increase, 732,329. Number of passengers carried, 154,961, viz: through, 24,655½; way, 130,305½. Tons of through freight, 92,585; do., way, 87,416—total 179,951.

The financial condition of the company, March 31, 1862 and 1863, is exhibited in the annexed Balance Sheet:

	1862.	1863.

Surplus earnings	212,723 37	342,935 38
	$5,586,704 69	$6,509,826 28

According to the above statement, the increase in construction account has been $41,002 62; in

Toledo depot property $8,870 68; and in rolling stock account $212,166 62. By reference to the last report it will be seen that a large amount of the rolling stock was owned by A. Gross & Co. Since that time, the company has purchased all their interest in the stock used in operating the road, which consisted of 12 locomotives, 131 box and stock, 28 platform, 7 passenger and 2 baggage cars, for which they paid $184,666 12; to which add $27,500 for 44 new freight cars—together $212,166 62, making the entire cost of the rolling stock $339,553 34.

There has been $52,225 20 of the old issue of the capital stock returned to be reissued. There has also been $1,221 96 issued for stock paid in—making, together with interest on the old issue, $65,293 71, the increase in the capital stock of the new issue.

Bills payable shows amount still due $64,300 57, against $221,784 94 last year, a decrease of $161,876 66. Since the close of the fiscal year there have been paid on this account $59,162 77—leaving a balance of only $5,137 80 due.

In August, 1861, the company made a proposition to holders of the first 300 mortgage bonds, to fund for five years six coupons, being those due July 1, 1861, to January 1, 1864, inclusive, with 7 per cent. interest, to be paid semi-annually in New York, to issue scrip therefor in due form. The funded coupons to be placed in the hands of a trustee, in order to hold the same covered by the mortgage until the scrip be paid off. The holders of 169 bonds only have accepted the proposition, and funded their coupons, the interest on which has been promptly paid. The coupons due on the remainder, 131 first mortgage bonds, are still unpaid from January 1, 1861, the holders refusing to surrender the coupons. The first mortgage bond debt, including funded and unfunded coupons is $358,940.

These were negotiated and sold, the past year, 79 of the second mortgage bonds of the company, to pay the interest due on grading and material furnished to complete the road. Also 160 were issued, to purchase the rolling stock; and 12 were used to purchase the depot grounds at Dayton. There were redeemed 6 bonds at 80 per cent. on their par value, leaving 245 credited as sold the past year. The whole number of this class of bonds disposed of to April 1, 1863, is 2,503. In 1859, the parties holding this class of bonds, to enable the company to procure the iron, chairs and spike to complete the road from Lima to Toledo, agreed to deposit their bonds in the hands of a trustee, and the coupons on the same to be retained by said trustee, and not presented for payment; in order that the income of the road applicable to the payment of these coupons, should be applied in payment of the iron rails, etc. In consequence of the embarrassed condition of the railroad interests in the country for the first two years after the completion of the road to Toledo, the iron debt was not liquidated until within the last six months; consequently the bonds remained in the hands of the trustee, and no interest was paid. While the bonds remained in that condition, it was not deemed necessary to make up the interest account, as it was impossible to give the correct amount, as the contractors had not completed the road, and the interest on their contract had not been adjusted, which has been done the last year. This company entered into an agreement in February, 1859, with the C. H. & D. R. R. Co., to purchase 300 of this class of bonds, from a certain portion of the earnings of this road over their road, at 80 per cent. on their par value. Of this number, 149 have been sold, on which the interest has been promptly paid, and charged into the current interest account of each year. There were also 50 additional bonds of this class sold in 1859—the punctual payment of the interest being guaranteed by individuals—which has also been paid. The number of coupons past due and unpaid on the above class of bonds from July 1858, to January 1, 1863, is 18,578, and the amount due $650,-230, which has been charged to profit and loss. There has also been charged to this account the coupons funded on the 169 first mortgage bonds, $35,490; the coupons not funded, less the amount charged against the earnings of the year, $14,-280; also, the coupons on the second mortgage bonds, for interest on grading contract $63,595; commissions paid, etc., $38,339 66—making a total of $801,934 66. From which deduct the surplus earnings of previous years, which were credited to profit and loss, $212,723 37, leaving a balance to debit of profit and loss account of $589,211 29. The surplus earnings of this year, when credited to that account, will make it $246,-275 91. The entire debt of the company, as now shown on the books, is $3,593,870. The amount due for pay rolls in mostly for March labor, which has since all been paid off; and the company is now free from all debts incurred for labor and materials used in working its road.

The officers elected for 1863 are as follows:

President.—S. S. L'Hommedieu.

Vice President.—R. M. Shoemaker.

Directors.—M. R. Waite, H. S. Conklin, P. Smith, George H. Hill, John Young, John W. Hartwell.

General Superintendent.—Daniel McLaren.

Secretary and Treasurer.—F. H. Short.

County Subscription Bonds.--Bona Fide Holders.

ACT AUTHORIZING CERTAIN COUNTIES TO SUBSCRIBE TO THE DAYTON AND MICHIGAN RAILROAD COMPANY.—BONDS REGULAR ON THEIR FACE AND IN THE HANDS OF BONA FIDE HOLDERS HELD TO BE VALID.

The general assembly of Ohio authorized the commissioners of certain counties through which the Dayton and Michigan Railroad might be located, to subscribe to the capital stock of that company, and issue negotiable bonds in payment of such subscription. The county of Hancock subscribed, and issued its bonds in payment, certain of which came into the possession of one Daniel H. Treadwell, who now asked from the Supreme Court of Ohio, a maudamus to compel the county to satisfy is bonds. The first answer of the defendants was to the effect that the road had never been located through the county, and on demurrer, this was held to be a sufficient defense, as showing that the bonds had been issued illegally. Afterwards the writ was amended, by an averment that the bonds had been issued and negotiated by the commissioners. The answer to the amended writ alleged that the relator *had notice* that the railroad was never located through or in the county; that he never paid a valuable consideration for them; that the commissioners never subscribed for the stock; and denied that the bonds were the deeds of the county of Hancock. One of the provisions of the acts of assembly was that all bonds "issued and negotiated" by the commissioners "and regular on the face thereof" should "in the hands of any bona fide holders thereof, be deemed and taken in all courts and elsewhere, as conclusive evidence of the regularity of everything required by this act preliminary to the issue and negotiation" of the bonds.

The Supreme Court now grant a premptory writ of maudamus against the county, and hold, that the bonds being regular on their face, and issued to the company ostensibly in payment of a subscription of stock and having been put in circulation and having passed into the hands of a bona fide holder, they are valid. The following is the opinion in full rendered by the Court at the decision of the case:

Gholson J.—Upon the issues of fact joined between the parties in the case, we should certainly feel bound to decide, that the bonds held by the relator are invalid, but for the considerations, that he is a *bona fide* holder of those bonds, that they are regular on their face, and that the statute has provided, that such bonds, issued and negotiated by the commissioners, shall be deemed "conclusive evidence of the regularity of everything required by this act to be done preliminary to the issuing and negotiation." We have no difficulty in finding that the relator is a *bona fide* holder, and that the bonds are regular on the face thereof. We also think that the bonds were issued and negotiated within the meaning of the statute. They were executed by the commissioners, and delivered to the agents of the Dayton and Michigan Railroad Company, to be put into circulation, and must as to a future *bona fide* holder, be regarded as "issued and negotiated." This issue of the bonds and delivering to the agents of the company, is shown by the record of the proceedings of the commissioners. In form, also, as shown by the proceedings of the directors of the railroad company and of the commissioners, there was a vote of the electors of the county, and a location, through the county, of the railroad. This location was soon abandoned and we think the evidence shows, was not made in good faith, and that the real object was to aid another railroad company. Such a purpose was in fraud of the law, and illegal, but it does not appear on the face of the transaction, and there is no evidence that the relator had any notice of the fraud and illegality. The question, then, as properly stated by the counsel for the defendant, is, whether they are estopped by the statute from showing, as against the relator, such fraud and illegality, to invalidate the bonds? It is argued with ingenuity and force, that the statute does not extend to the want of power, but only to irregularity, in the precedent steps. That the steps requisite to confer the power to issue the bonds, must be substantially taken, and only irregularities in taking them are to be overlooked in favor of a *bona fide* holder. The distinction between a want of power, and irregularity in the exercise of power, was recognized in the decision on the demurrer in this case. When a particular matter is to be regarded a condition precedent to the exercise of a statutory power, conferred on such a body as the county commissioners, will depend upon the construction of the statute. That which might otherwise be

regarded a condition, may, in view of the evident object and intent, and to give proper effect to the language employed, be placed on the footing of an irregularity, or, what would amount to the same thing, it may be apparent, that those who have to act, are authorized to decide by their action that they have the authority to act.

In taking the steps required by the acts of the general assembly to precede the issue and negotiation of the bonds, such as the vote of the electors on the question of subscription to the stock of the railroad company, and the location of the railroad in or through the county, it might become a question of some nicety, to draw the line between what would be substantial and what irregular. We cannot think that such a distinction was in view of the legislature. The object was clear, it was to facilitate the negotiation of the bonds and add to their market value. It was doubtless expected, that they would be used in places where an inquiry into the mode in which the steps required had been taken, would be inconvenient, and the object was to make any such inquiry unnecessary. If the protection to a *bona fide* holder were extended only to what might be regarded as irregularities, in view of that distinction, it is doubtful, whether any effect would be given to the enactment of the legislature—whether it would not amount to a mere superfluous declaration of what would be the rule of law on the subject. For it would be difficult to maintain if the special provision as to the effect of the bonds regular on their face were stricken from the act, that a *bona fide* holder of the bonds would be affected by mere irregularities in the taking of the precedent steps, or in the exercise of power by the commissioners. The extreme case of an issue of the bonds without any attempt to take the precedent steps was not contemplated, and we have not to deal with such a case. The steps required were ostensibly and professedly taken; the bonds were issued and negotiated by the commissioners, are regular on their face; and the relator is a *bona fide* holder and in our opinion a fair construction of the statute requires us to hold, that he was not bound to inquire whether there was any defect in the precedent steps and that his title to the bonds cannot be invalidated by showing a defect, whether proceeding from intention or neglect. The acts of the general assembly, under consideration were enacted before the adoption of the present constitution, and as has been frequently held are not inconsistent with it; and we cannot appreciate the argument, that the provision in that constitution against a loan of the credit of a county gives to the illegal acts of the commissioners and the railroad company an effect, as against a *bona fide* holder of the bonds, which they would not otherwise have. A misappropriation of the proceeds of the bonds by a secret arrangement between the commissioners and the directors of the Dayton and Michigan Railroad Company, would be none the less illegal and a fraud on the law under which they were acting, because it contravened the spirit of a provision of the present constitution; but we cannot understand how it would be any more so, or that the degree of illegality could make any difference. After all, it can only amount to this, that the precedent steps required were taken, the bonds regular in form, were issued and placed in the hands of the railroad company to be put into circulation, all in seeming compliance with the acts of the general assembly, but there was a secret understanding between the commissioners and the railroad company that the bonds and their proceeds should be diverted from the purpose for which they were authorized to be issued, and applied to another. If the secret understanding to misappropriate, cannot properly affect the rights of a *bona fide* holder, and we think that neither on principle, nor in justice, nor on a fair construction of the statute aught he to be affected thereby, then, surely, the object of the misappropriation, whether for individual benefit, for another work of internal improvement, or for any other unauthorized purpose, can make no difference.

It is to be regretted, that those acting under such authority as that vested in the present instance, do not keep themselves within its limits, and exceed them either from design or from a want of proper apprehension of the law.

But we are satisfied that it was the intention of the legislature, by a particular and special provision of the statute, to protect a *bona fide* holder of the bonds issued under the authority, from the ordinary consequences of such illegal acts, and the issues will, therefore, be found for the state, and a peremptory mandamus will be awarded.

Peremptory mandamus awarded.

The Mont Cenis Tunnel.

The following particulars respecting this interesting undertaking have been recently laid before the Lower House of the Italian Parliament by General Menabrea, Minister for Public Works:

"The lowest pass of the Alpine chain on this side is about 2,100 metres* above the sea level, and the tunnel will enable the railway trains to cross the mountain at a height of about 1,333.8—*i. e.*, 766.2 metres below the present pass. The tunnel will be 12,220 metres in length.† Its southern opening at Bardonneche, in the Valley of Susa, is 1,335.38 metres above the sea level; from this point the tunnel rises 0.5 per 1,000 metres up to a distance of 6,100 metres; that is, to about the middle of the gallery, when it again slopes down at a declivity of 22.2 per 1,000 to its northern opening near Modane in Maurienne, which lies at a height of 1,202.82 above the sea. An English engineer, Mr. Bartlett, set to work a boring machine, by which a tunnel could be pierced with a rapidity eight or ten times greater than any hitherto obtained by ordinary means; but Mr. Bartlett's contrivance was wrought by steam, and could not be applied to a tunnel where air could not be had for combustion. The Italian engineers proposed to substitute compressed air instead of steam; and, notwithstanding long opposition on the part of foreign scientific men, their method is now in full operation, and their success exceeded the most sanguine expectations.

The tunnel was begun in 1857, with ordinary means. That year and the two following were spent in preliminary operations, such as the construction of houses, workshops, &c., for in that inhospitable region there was all to be done. The first experiments with the boring machines were made in 1861, at Bardonneche, on the Italian side, but, even on this side, the regular work only proceeded uninterruptedly in 1862. The invention of the new machine was yet in its infancy; its occasional failures, and even its gradual improvements could not fail to cause considerable delays. The tunnel at Bardonneche, on the 1st of January, 1863, was 1,274 metres. In the years 1857, 1858, 1859 and 1860 724 metres had been achieved by ordinary means. By the aid of the new machines 170 metres were added in 1861, and 380 in 1862. On the Savoy side, at Modane, from 1858 to January 1, 1863, only the ordinary means were employed and the result was for the whole of that period only 925 metres. The tunnel, therefore, calculating the work achieved at both ends up to the beginning of the present year has attained a length of 2,199 metres, 550 of which have been made with the new machines. What was done at Bardonneche in 1862, in spite of the imperfection of a half-developed method—namely, 380 metres—must surely be possible in 1863; nay, it is quite certain that the result of the present year will be no less than 400 metres. On the side of Modane, again, the new method was applied on the 25th of January last, and, as there the errors which retarded the work at Bardonneche will be avoided, the result of the work on both sides for 1863 will be no less than 800 metres. The engineers are very confident that the work will proceed with even greater speed, but the Minister would base his calculation on the most certain data, and, by limiting the results of our yearly progress to 800 metres, he thought the whole undertaking would be achieved in twelve and a half years.

On the 7th of May, 1862, a convention was signed with France, by the virtue of which the latter State undertook to pay the sum necessary for the construction of 6,101 metres of the tunnel, half its length, at the rate of 3,000f. per metre, or 3,000,000f. per kilometre, on condition that this compensation should not, taken altogether, exceed 19,000,000f. The French, however, reckoned the work upon the understanding that it should be executed by ordinary means, and allowed a period of twenty-five years as necessary for its completion; but they stipulated that in the event of the tunnel being accomplished in less than twenty-five years, beginning with the 1st of January, 1862, the capital of 19,000,000f. would be increased at the rate of 500,000f. for every entire year that might be deducted from the *maximum* of twenty-five years. If the works were to last less than fifteen years the premium would be raised to 600,000f. for every entire year's reduction; so that if the work were actually achieved in twelve and a half years the Italians would gain a premium of more than 16,000,000f. Moreover, as the French Government does not reimburse the Italians immediately, but pays the interest of the sums due, and these interests may be reckoned at 6,500,000f., the Minister calculates that France will, at the end of the work, be indebted to Italy to the amount of about 31,700,000f.

The Victor Emmanuel Railway Company is obliged to pay a sum of 20,000,000f., of which 7,000,000f. falls to France; the 13,000,000f. which will be paid by the Victor Emmanuel Company is, therefore, to be added to the 31,700,000f. contributed by France. The total expense will be about 65,000,000f. Deducting the French share and that of the Victor Emmanuel Company, there will then be only about 20,000,000f. left to the charge of the Italian Government, and this will include the railway line from Susa to Bardonneche, a line forty kilometres in length, which will cost no less than 14,000,000f. or 15,000,000f.

It is important to observe that by the treaty of the 24th of March, 1860, which made Savoy over to France, it had been agreed that the Italian Government took upon itself the accomplishment of the work of the Mont Cenis tunnel. These words of the treaty were differently construed by the two States, inasmuch as Italy only reserved the power to have in her hands the whole execution of a work which reflected so high an honor upon her engineers, Grandis, Grattoni and Sommeiller, whereas France conceived herself entirely exonerated from her own share in the costs. It was the technical, not the economical, charge of the work that Italy intended to reserve exclusively to herself. The engineer Grattoni and the Deputy Pasini were, therefore, sent to Paris for some explanations with the French Government, when, after long discussions, and upon the production of documents irrefragably proving what was Count Cavour's real mind at the time of the conclusion of the treaty of 1860, France handsomely acknowledged the reasonableness of the Italian claims, and entered into that new convention of May, 1862, to which the Minister referred, and by which France engaged not only to bear her own share of the

expense, but even to allow the Italians a premium, should the skill of their engineers, succeed in hastening the consummation of that undertaking by which the Alps shall cease to be a barrier to the intercourse between the two neigboring countries.

The Minister added some important facts which will give an idea of the magnitude of the work in hand. In 1862, he said, in order to pierce 380 metres of the tunnel on the side of Bardonneche, the men were employed 582 times, each time seven hours and thirty-nine minutes for boring, and six hours and two minutes for loading and exploding the mines and clearing away the rubbish. In these 582 operations, 45,751 holes were bored, from seventy-five to eighty centimetres in depth; 72,538 chisels were set to work; there were 54,785 blasts, 18,622 kilogrammes of gunpowder were fired, 76,000 metres of match-line were burnt, and 1,334,000 cubic metres of compressed air were consumed, equal to 8,004,000 cubic metres of atmospheric air. The workmen on the 1st of January, 1863, were 720 at Modane and 900 at Bardonneche; altogether, 1,620. The grants for the work were as follows: For 1857, 1,000,000f.; for 1858, 3,500,000f.; for 1859, 500,000f.; for 1860, 2,500,000f.; for 1861, 3,000,000f.; for 1862, 2,000,000f.; for 1863, 2,000,000f.; altogether, up to this day, 14,500,000f. The expense up to the end of February has risen to 13,182,603f. 18c., and the Minister has in hand 1,317,396f.82c. He, therefore, thought that it would be necessary to apply to the Chamber for an additional grant of 500,000f., to enable him to finish 600 to 700 metres of tunnel, which were to be completed before the end of the present year."

*A metre is 39 37-100 inches or a little over 3¼ feet. †12,220 metres is 7⅝ miles.

Michigan Southern Railroad.

It is a well understood fact in railroad circles, that from the moment when the completion of the Atlantic and Great Western Railway from Salamanca station, on the Erie Railway, to its junction with the Cleveland and Mahoning Railroad at Warren, Ohio, and the further extension of the line, by means of a third rail, into Cleveland, was announced, it has been the wish of the Erie managers to have an unbroken rail, of the six foot guage, into Chicago; and to the accomplishment of this object their best energies have been turned. The original idea was by the Pittsburg and Fort Wayne Railway, by way of Orville, but here the opposition of the Grand Trunk line east of Pittsburg was aroused, and this project was abandoned. The South Shore line, composed of the Cleveland and Toledo and Michigan Southern Roads, presented the next most feasible route, and control having been obtained of the Cleveland and Toledo stock, nothing remains for the operators, in order to give them an unbroken connection, but to obtain a controlling influence in the shares of the Michigan Southern, and to this end their undivided attention is now directed. Should the designs of the Erie managers find a successful termination, it may not be many months before the citizens of Chicago will have presented to them a six foot gauge from New York to the Garden City.—*Chicago Tribune Aug.* 20.

The Lowell Horse Railroad.

Messrs. Wm. Noxon and Nicholas Mickels, the former of Syracuse and the latter of New York city, were in town yesterday and the day before, looking our city over, with a view to get at the practicability of the horse railroad for which a charter was obtained last winter. We understand that notwithstanding the fact that scarcely a man is prepared to believe the thing can be made to pay in Lowell, these gentlemen are by no means inclined to fall in with the general opinion; on the contrary, they believe that roads in every city of the size of Lowell will yield a handsome interest on the money invested in their construction. We do not know what decision the gentlemen named above arrived at, but judge that we shall soon hear something more respecting the enterprise.—*Lowell Courier.*

The Chicago and Alton Injunction.

The history of the Chicago, Alton and St. Louis Railroad has been a varied one from the date of its opening to the present time. Many have been the vicissitudes, which in its ten years operations, have come upon it, and now just as success has rewarded its new managers for their untiring energy and practical skill, and just as the long suffering stockholders were about to enjoy the luxury of a dividend, already declared, of 3½ per cent. on their shares, a civil tribunal puts forth the authority of the law, and managers and stockholders are compelled to wait yet a little longer. The first semi-annual dividend under the new arrangement was declared a few days ago, and was payable on the 25th inst. Before, however, any payments could have been made, Judge Williams, of the Circuit Court of this county, issued an injunction restraining the company from paying this or any dividend, until a hearing could be had on a bill which had previously been filed by Corydon Weed, Esq., of this city, who alleges that he is a creditor of the road, and that his claim should be paid before any profits are divided. The facts, as stated in the bill, are briefly as follows:

Previous to August 31, 1855, this road had been chartered and nearly completed, and was at that time operated by the old corporation. Three sets of bonds had been issued, and three mortgages executed, designated as the 1st, 2d and 3d mortgage. On the 31st of that month, the company executed a lease to one Hamilton Spencer, by which it was agreed that he should pay a certain rent, and apply the same in payment of the coupons or said bonds, and in discharge of the *Illinois* debt, being debts due on the line of the road. Mr. Spencer went into possession of the road, and provided for the payment of only a part of the coupons. The trustees of the 1st, 2d and 3d mortgages, commenced process of foreclosure, but defences were interposed, claiming that the mortgages were void, and the cases proceeded no farther. The company then made an assignment to Fullerton, Brower & Keating, transferring all their interest subject to the Spencer lease, and the trusts secured therein.

By subsequent conveyances the property became vested in Mattison & Litchfield, from whom it was transferred to the present corporation. The bondholders, failing to get possession of the road under their attempted foreclosures, then brought a bill in the United States Court to carry into effect the trusts of the Spencer lease, by which the coupons on these bonds were secured. By an arrangement between them and Mattison & Litchfield, the property has been transferred to the present corporation, but without paying or securing the Illinois debt. The company now claim to be rich, and able to make their dividends, and the holders of the Illinois debt, residing on the line of the road, desire to learn how it is that the other debts, which were secured by the Spencer lease, were paid, and they cut off and foreclosed without having even been cited before a court, or received any pay.

The attorney for the complainant, Mr. Weed, is James L. Starke, Jr., and C. Beckwith is also engaged as counsel in the case.—*Chicago Tribune.*

Hartford, Providence and Fishkill Railroad.

At a recent meeting of the stockholders in this company it was decided to sell the road to the Boston, Hartford and Erie Railroad Company at the rate of $10 per share for the common stock and $20 for the preferred. The payment is to be made in cash now; or at the end of 31 months, without interest, to pay double these rates, either in stock of the Boston, Hartford and Erie Railroad Company, or in cash, as the latter may elect. This action does not in any manner interfere with the rights of the bondholders, and the road will be operated by the trustees for them as heretofore.

Valuation of Springfield.

The real estate valuation of Springfield this year is $7,211,320, an increase of $491,820 since last year, and the personal $3,750,810, an increase of $699,330, making the grand total $10,962,130, and the total increase, $1,191,150. The number of polls is 5,341, and the rate of taxation $10 on a $1,000.

Railroad Earnings--Weekly.

The traffic of the Great Western Railroad for the week ending August 21, 1863, was as follows:

Passengers	$21,352 96
Freight and live stock	16,651 51
Mails and sundries	1,209 04
Total	$39,213 51
Corresponding week of 1862	38,137 86
Increase	$1,075 65

The earnings of the Chicago and Alton Railroad for the 3d week of August, 1863, were:

Passengers	$14,195 80
Freight	24,667 87
Sundries	1,074 34
Total	$39,938 01
Same week last year	31,803 05
Increase	$8,134 96

The earnings of the Toledo and Wabash Railroad Company for the 3d week of August, 1863, were | $29,728 61
Same week, 1862 | 37,004 50
Decrease | $7,275 89

The earnings of the Chicago and Northwestern Railway for the 3d week in August, 1863, were | $21,409 95
Do., 1862 | 14,668 61
Increase | $6,741 34

The earnings of the Michigan Central Railroad for the 3d week of August, 1863, were. | $47,648 57
Same period, 1862 | 48,105 48
Decrease | $366 91

The earnings of the Chicago and Rock Island Railroad for the 3d week of August, 1863, were | $37,856 00
Do., 1862 | 28,872 00
Increase | $8,984 00

The earnings of the Michigan Southern Railroad for the 3d week of August, 1863, were. | $48,534 83
Do., 1862 | 53,037 63
Decrease | $4,502 80

The earnings of the Galena and Chicago Union Railroad for the 3d week of August, 1863, were:

Freight	$30,714 52
Passengers	10,084 72
Mails	1,300 00
Total	$42,049 24
Same week, 1862	28,950 14
Increase	$13,099 10

The earnings of the Milwaukee and Prairie du Chien Railroad for the 3d week in August have been | $14,988 39
Same week, 1862 | 16,997 20
Decrease | $2,008 81
Total for first 3 weeks in August, 1863. | $41,432 30
" " " " 1862. | 44,324 85
Decrease | $2,892 55

Statistics of Gold and Silver Production and Coinage.

From Samuel Hallett & Company's American Circular.

ESTIMATED PRODUCTION, ETC., OF CALIFORNIA GOLD FROM 1848 TO 1862 INCL.

Years ending Dec. 31.	Estimated Production. According to "World," 8th June, 1861.	Estimated Production. According to "Hittell,"* 1861.	Exported from California to all parts.	Received per steamer at New York.
1848	$58,902	$10,000,000	$	$
1849	8,196,678	40,090,000	4,921,250	
1850	48,241,168	50,000,000	27,67,6340

American Railroad Journal.

Saturday, September 5, 1863.

Stock Exchange and Money Market.

The money market has not yet assumed a condition, satisfactorily to those who deal in stocks, in exchange or money. A great many persons are successful in their operations for the very reason that there is an uncertainty in the future. The variations from day to day are so great that the inducement to adventure is very strong, and there is always a class of men who are willing to risk every thing on the turn of the tide. No doubt very large fortunes have been realised by one class of operators, and large sums have been lost by others. It is difficult to say, whether it is luck or sagacity which determines the results. We hear much of the successful millionaires, but the unfortunate disappear from sight, and no one cares what becomes of them. We may safely predict that for the present, those who speculate for a rise are most likely to be successful, for the wants of the Government, and the large issues of Treasury notes and certificates of indebtedness which are a necessity of the hour, sustained by the generous confidence of the people, and their determination to see the struggle out, are such as to render it a moral certainly, that paper money is to be the main stay of the nation till the war is over. This then renders it impossible for the present, that money in this shape should long be scarce, and we must therefore expect that stocks will advance, that the rate of interest will continue low, that dividends will be paid, and that all the producing classes will find a profit in their work. These are indeed happy days for those who furnish what the public, or the Government require. Never were paper dollars more plentiful than hitherto, every one's wallet appears to be filled; those who are in the way of accumulating are very successful, and an air of prosperity pervades the loyal states. The question now arises will there be any reaction? Will there be a crash when the currency shall be contracted to a specie basis, and the Government, and the Banks, and individuals will be called on by the laws of commerce and finance to make good their promises in gold. Is the univer-

sal standard of value to be reintroduced into our every day business without some disastrous disturbances. Will property depreciate as that standard returns, and we submit to the general laws of value, or rather the standard of value by which all commerce is regulated. These are questions of grave import, affecting our National credit, and private fortunes alike, and this is the crisis to which all thinking persons are turning their attention, as the rebellion approaches its termination, and the restoration of our Union becomes more evident. We confess we belong to the class of thinkers who see progress in all our movements, and good in everything. We do not believe we are going back to the dark ages, or that the wondrous development of American life is to have been made in vain.

We should be almost ready to join the ranks of the sceptics, and plunge into night and chaos with them, if we thought this continent, this our power, these our prosperities were a fruitless gift and to end in the desolation of truth and justice and freedom.

We believe therefore first in the eternal fitness of things, and next in the new race of men who accept this maxim. There is no nation in the world, which has risen so rapidly as ours; none with such an area so open to industry and freedom, none surpassing it in enterprise and industry; none so capable of carrying out its principles, or its designs. None which has had such a mission or so far has so nobly executed it. With these opinions, certainly so far sustained by our history in the past, may we not look hopefully to the future. And how small do these questions of currency, and treasury notes appear when viewed in this large and philosophic spirit. We therefore honestly believe, that this question of currency will solve itself. England within the space of three years from an excessive currency as it was then deemed, returned to a specie basis, without any difficulty, notwithstanding the fixedness of its financial policy, and its horror of innovation. We are making history as we proceed, and are revolutionizing the world by our originality as well as our example. Here was the first cotton gin, the first successful application of steam to navigation, the first clipper ship, the first telegraph, the first successful iron clad, even in our own time, and now we have shown how a great war may be conducted, and a great rebellion overcome without the least reference on our part to foreign capital or foreign sympathy.

We may safely conclude that our financial system is to be successful to the same extent. We have paid two national debts; we have never felt taxation till now, and scarcely feel it; we are earning from twelve to fifteen thousand millions of dollars a year, which resolves itself at once into capital, and our population and our cities are multiplying to an extent which taxes even our own credulity. Can we suppose that three or four hundred millions of currency are beyond our control or redemption, or that our national debt, which principal and all does not equal the yearly taxation of France and England, is to be a load on twenty-four millions of people, who in one generation are to number forty millions? The idea is preposterous.

The truth is, the currency now afloat will on the return of peace be absorbed faster than it can be readily replaced by any other security equally as good and popular. Already we see the local banks preparing for a change in their circulation. In January last the banks of this city had afloat nine millions seven hundred and fifty-four thousand three hundred and fifty-five dollars. On the 22d of August the amount was five millions five hundred and forty-five thousand nine hundred and seventy dollars. And beyond all question their circulation must give way to a more useful currency, which will be used at par through the United States, because it will everywhere be available for the payment of taxes and obligations to the Government, so that by the absorption of the Treasury notes on the one hand, and the substitution of the new national bank notes on the other, we perceive a process is to go on which will be conformable to the wants of the country, and so gradual as to produce no violent shock to any existing interests. At all events, this is the view we are inclined to take of the currency question as it now presents itself to our consideration.

Thus we see an easy Money Market, and a hopeful Share Market in spite of all the predictions of the sceptical; and the difference between paper and gold has got so near an equilibrium as to make the final adjustment quite a simple affair. It has within the year fallen from 175 to 122, and who is the worse for it? Nobody appears to be hurt by this tremendous decline. Can we not meet a further fall of 20 or 25 per cent., when the time comes, with equal complacency and no more ruinous consequences? Certainly, the fact stated amounts to a demonstration of the elasticity of American business, and the stoutness of the material which constitutes its warp and woof.

We have again to record the popularity of all dividend paying securities, the advance of the favorite railway shares, and the stability of many that were once considered doubtful. All our railways have been doing well, and the managers have been thoughtful enough in all possible ways to reduce their liabilities and expenses. So that most of them have in prospect a long career of prosperity. This circumstance is bringing them into renewed favor abroad, and we see that there is a disposition even in England to repurchase.

It is not necessary for us to elucidate this idea by references to particular cases, since our weekly tables are full, explicit and correct, and present in the clearest manner by figures, what we have here attempted to generalize. Our lists of sales are reliable, and furnish the surest evidence of the condition of the market, while the quotations of offers as well as reports of sales may also be relied upon to illustrate its tendencies. We may assure our readers that in no other journal of this country are the character and value of our national, State and private securities more carefully represented than in our columns, and we venture to say that no man can safely operate, at least in the City of New York, without making the AMERICAN RAILROAD JOURNAL his *vade mecum*. Gold has risen a trifle within the last few days; a barometric response to the delay of our navy before Charleston as some suppose, but it must be remembered that a large number of new national banks are going into operation, and these all require and are purchasing certain quantities of specie. This fact may explain the recent rise and a larger one still to come.

There was a small panic in Wall street on Thursday, and stocks fell while gold went up. This is easily explained. It is understood the Secretary of the Treasury is about to issue some thirty or thirty-five millions of dollars of treasury notes bearing 5 per cent interest, which are to be a legal tender. The Banks having no commercial paper offered for discount, have prepared to take these treasury notes, and have called in their temporary loans, and refused to certify checks in advance of deposits as customary with well-known houses. This has broken up the small operators, who are now forced to sell; and hence the decline.

But as the Government is certain to expend all the money they receive from this new issue, it will certainly flow back into the ordinary channels, and we think therefore the depression will only be momentary.

The Chemung Railroad will pay on demand, at No. 237 Broadway, a quarterly dividend of two per cent. free of tax.

A regular semi-annual dividend of 4 per cent. will be paid by the Hudson River Railroad Company on the 15th inst.

The Housatonic Railroad Company have declared a dividend of four dollars per share (free from Government tax) on the preferred capital stock, payable on the 7th inst., in New York, at Messrs. Ketchum, Son & Co.'s, No. 40 Exchange Place; in Boston, at Messrs. J. E. Thayer & Bros., and in Bridgeport, at the office of the company.

The preferred shares of the Marietta and Cincinnati Railroad, as reorganized, have been placed upon the Stock Exchange. The Farmers' Loan and Trust Company have been appointed Transfer Agents in this city.

The interest due September 1, on the mortgage bonds of the Cleveland and Pittsburgh Railroad Company; also the principal and interest of the River Line Certificates, due Sept. 15, will be paid at the office of Wm. C. Gilman, No. 46 Pine st. No interest will be paid on the River Line Certificates after maturity.

An application is to be made to the next Legislature for a charter to build a railroad from Windsor to Bellows Falls, Vt.

The following quotations of sales of Railway and other securities are in addition to those given elsewhere in our columns:—

☞ The large bridge across the Cumberland river, near Nashville, Tennessee, replacing the suspension bridge destroyed by the rebels, was opened for public travel on the 26th ult. It is a substantial structure, and was built under the direction of the military authorities.

Tunnel under Lake Michigan.

We have received since our last issue the printed specifications for the construction of a brick tunnel under Lake Michigan to supply the City of Chicago with pure and wholesome water. We have already alluded to it at some length, and regret the specifications did not reach us until after our article was published. Nevertheless there is time enough for the engineers and contractors in this city and its immediate vicinity, to call at this office to examine them for themselves, and also to make proposals for executing the work, as these may be made up to the 9th of September. In these specifications, the cribs, the land shaft, the inlet cylinder for the outer lake shaft, the intermediate cylinders for the lake shafts, and the tunnel proper are minutely described.

There are also general requirements given for the government and guidance of the contractors. Attached to the specifications are calculations of the quantities of material in the outermost crib which will enable any contractor to estimate the cost, whether for timber, iron, stone filling, spikes, &c. So also is furnished the forms of proposals for the lake tunnel and land shaft, without cribs or lake shafts, and for the cribs alone, and for the cast iron cylinders for the lake shafts. The whole subject is presented in a practical and intelligent manner, and persons at a distance may make proposals with as much certainty as if they were on the spot.

Northern (Ogdensburg) Railroad.

A re-organization of this company is being discussed both here and in Boston. The line of road —Ogdensburg to Rouse's Point—is 118 miles, and earns in gross about half a million of dollars, while since 1856 (the work being in the control of trustees) no other net income than 7 per cent. on the first mortgage bonds, $1,500.000, has been realized by the other bond or stockholders. The second mortgage is $3,077,000 in amount, the bonds being convertible into shares, and it is this interest, now selling at less than 80 cents on the dollar, with eight or nine years accumulation of unpaid coupons, that propose to reorganize the company and take the property out of the present trusteeship.

American West India Company.

This Company will despatch the first vessel of their steamship line to St. Doming on the 12th September. The route is well chosen to accomodate travellers and shippers to the West Indies, the principal stopping places being Bermuda, St. Thomas, St Johns and Mayaguez, Porto Rico, and St. Domingo city. From these points auxiliary lines of steamers are now running to the lesser islands and the Spanish Main. This company has displayed a great deal of tact and enterprise in its management, and its success appears to be an established fact.

☞ We understand that a movement is about to be made for the completion of the new railroad from St. Louis to Chicago via Jacksonville. A part of the road is already built and in running order.

☞ Engineers have commenced surveying a route through the town of Kinderhook, N. Y., for an extension of the Harlem Railroad from Chatham Four Corners to Albany.

Extension of the New York and Harlem Railroad.

Engineers have been engaged for some time in surveying on the borders of our country for the extension of this line of railroad from Chatham, Columbia Co., North, to connect with the roads centering at Troy or Albany, or perhaps what is more probable, to extend it through the eastern towns of this county to Eagle Bridge, thus tapping our northern line of roads. In the south part of our county efforts are being made to have the road pass through the village of West Nassau, on the proposed route to Albany, and like effort in regard to Sand Lake if the route to Troy should be decided upon. The route to Troy is undoubtedly the most feasible, and we hope parties interested will give it all the attention it deserves. The former extension or branch road partially graded on the Lebanon Springs route, we understand, is to be abandoned as being too high a grade for present purposes.—*Troy Times.*

☞ The Toronto *Globe* says the Canada Northern Railway Company make a very creditable exhibit for the past half year. By the skillful development of the local traffic and reduction of expenditure, they were able to pay the interest on their bonds, leaving a small surplus. Working expenses, 54½ per cent of gross earnings.

☞ Messrs. Wason & Co., Springfield, have just completed four large passenger cars for the Central Pacific R. R. of California, and have a contract for 70 freight cars for the same road. They have also just furnished four cars for the New York and Boston Express trains, and three horse cars for Brooklyn, N. Y.

☞ The Columbus, Piqua and Indianapolis Railroad was sold on Thursday, 6th ult., under foreclosure of the first mortgage, for $500,000, to L. Holbrook, J. J. Rosevelt and I. T. Thomas, Trustees for the bondholders.

Worcester Horse Railroad.

The horse railroad in Worcester, Mass., have commenced their regular trips, running from Lincoln square to Webster square, and in Lincoln, Main and Front streets. The track, including branches, is four miles in length. Mr. George F. Bonney, formerly Superintendent of the Middlesex and Suffolk roads, is the Superintendent.

London Quarterly for July.

We have received this number from Leonard Scott & Co., 38 Walker st.. It is particularly valuable for containing an article on the resources and future of Austria, a country which just now is playing a great part in the old world and aspires to seat itself in the new.

☞ The new telegraph line to Pittsburg, via Hanover Junction; Chambersburg, Bedford and Fayette county, is being pushed forward as rapidly as possible. When completed from Hanover Junction to Pittsburg, it will be connected with the Independent Telegraph Line already constructed from Portland, Me., to Washington, D. C., and with the new line from Harrisburg to Baltimore, thus forming the seaboard and a portion of the inland basis of a complete system of wires throughout the country.

☞ We understand that the Coal Companies (Cumberland and America) operating from the Cumberland coal region, have resumed the business of transportation on the Chesapeake and Ohio Canal.

Iron Bridge over the Erie Canal.

At a meeting of the Canal Board, held in Albany on the 26th ult., the following resolution was adopted:

Resolved, That the Canal Commissioners be and they are hereby authorized and directed to cause an iron bridge to be constructed over the Erie Canal on the military road in the village of Tonawanda, according to the plans and estimates of O. W. Storey, Engineer, this day submitted to the Canal Board, at an expense not to exceed $2,700, the same to be paid from moneys appropriated for extraordinary repairs.

Oswego and Syracuse Railroad.

The Oswego *Paladium* says: "We learn that arrangements have been perfected by which the connection between the Oswego and Syracuse and the Binghamton Railroads will soon be made, and that measures are to be taken immediately, by laying down an additional track, to make a gauge to conform to that of the Binghamton and Pennsylvania Railroads. This will give us a direct and unbroken railroad to Philadelphia and Washington, and the coal fields of Pennsylvania, which will be of immense advantage to the business of our city."

The Syracuse *Standard* adds: "It is also contemplated to extend the track of the Oswego road to the docks in our harbor, and we learn that an application has been made to the Common Council to grant the company the right of way on Second street, from Utica street to the harbor, for that purpose. This is an improvement which has long been needed, and its accomplishment is worthy the enterprise of the company. It will cheapen transportation and add materially to the facilities and business of the road."

Chicago Wood Pavements.

As the Board of Works in the City of Chicago evidently give the preference to the Wood or Dickinson pavements over those of stone, as being the most durable of any kind yet used there, we copy the following description of the method of construction:

"Lay down flooring of one inch board on bed of sand; coat floor with asphaltum; stand on end blocks of wood six inches high by three inches thick and nine inches in length, in rows about one inch apart, divided by strips of board. Fill in these open narrow spaces with asphaltum, and pebbles, and then cover the whole with asphaltum. The contract price is $1.85 per square yard without the curbing. The contractor puts in the sand bed 1½ inch deep, all over that to be charged for. There are six miles of these pavements in Chicago and after six years' constant wear, are found to be nearly as perfect as when laid down."

Telegraphic Communication between England and the East Indies.

A very important communication appeared in a late number of the London *Times* touching electric correspondence with the East Indies, as follows:

"If mechanical appliances are to be depended upon, and if the most careful and experienced supervision of all relating to the scientific perfection of a submarine cable is of any avail, the whole of England, before next March, will have at command a means of daily, if not hourly, communication with Madras, Calcutta and Bombay. The activity of gray shirtings or the dullness of mule twist ought to be known here to the fraction of an anna every morning; and the news from China and Australia anticipated by exactly the difference of time between an overland passage and an overland telegraph, which means the difference between thirty days and five hours. So carefully have the plans been matured, so quietly has the cable itself been manufactured, that the announcement that the expedition will in a few days begin to leave these shores to accomplish such great results comes upon us with a suddenness that is almost startling; and the notion of being in instantaneous communication with all India soon after Christmas seems almost too good and too astounding to be capable of such immediate realization. Such, however, is at least the object with which the expedition will start, and such, we have not the slightest doubt, is the object which it will accomplish with triumphant success."

[From the U. S. R. R. and Mining Register.]

The Gold and Silver Mines of the Great Colorado Basin.

EXTRACTS FROM THE JOURNAL OF DR. WILLING'S EXPLORATIONS.

This series of articles contemplates the description of a vast extent of country—extending from the 32d to the 38th parallel of north latitude and the parallels of longitude between 30° 30′ and 37° 30′ west from Washington—containing matters of fact relative to the mineral and agricultu- resources of the country.

The object in view is to enlighten the country to some extent of the existence of immense metallic deposits, embracing the precious and other metals heretofore unknown and unsought for, within the limits as described above, including parts of Colorado and Utah and all of Arizona. This region has an area of 205,800 square miles, or 131,712,000 acres, three-fifths of which is mountainous, one-fifth plateaus, parks and table lands, and one-fifth alluvial valleys and bottoms.

79,077,200 acres are of mountain ranges—one-sixth of which is (roughly) calculated to contain metallic deposits, or 13,176,200 acres. 26,342,400 acres of agricultural lands, embracing uplands and valleys, and the like quantity of acres, in good pastoral lands. For convenience of description, the basin is divided into the following sections, each being named from its most noted features and geographical position:

1st. North East. (*a*) The Elk Horn Mountains.
(*b*) The *Sierra de la Platte* or Silver Mountains.
(*c*) The Sierra San Juan Mountains.
Central. (*d*) The Cosninas. (*e*) The Jumburacrari.
North West. (*f*) Virgen River.
South West. (*g*) Colorado River Valley.
South East. (*h*) Rio Gila Valley.

These localities embrace the metalliferous range, each of which will be briefly considered under its special head, the data being furnished from a late scientific exploration of the region in question.

GEOLOGICAL AND MINERALOGICAL CONDITION OF THE COUNTRY.

The similarity in geological structure of the chief gold regions is such that we may, with reasonable certainty expect its occurrence wherever the structure exists, or in other words, wherever there are extensive formations of talcose slates, accompanied to a greater or less extent by intrusive rocks.

The principal gold regions of this large area begins on the north in the continuous belt of the Rocky Mountain chain; and the northeastern spurs of the Sierra Nevada Mountains. These follow the course of the main range until interrupted on either side of the eastern rim of the great basin by the great Wasacht chain; and the San Juan Range passing through these chains of mountains, its southern limits extend to the boundary line of the United States and Mexico.

The chief rivers rising near the summit of these mountains form torrents; with average rates of descent of from 100 to 180 feet to the mile. * *

The deep ravines which have been furrowed out by the flowing waters have others opening into them, which also have their affluents so numerous that the whole flank is everywhere intersected by glens and ravines, and which presents the appearance of being composed throughout of isolated conical peaks, each rising higher upon approaching the summit of the mountains.

Above the ordinary height of all these are several very elevated volcanic peaks.

The flank from the valleys, upwards to no great distance of the summit, is composed of argellite, talcose, chloritic and hornblendic slates, with intrusive masses consisting of trap, porphyry, sienite, serpentine and other igneous rocks. Each locality herein enumerated partakes of these characteristics, and a description of the formation of one locality answers for the whole, so universal is the similarity of structure throughout all gold and silver regions.

CAUSES OF DRIFT GOLD IN THE PLACERS, GULCHES AND ALLUVIAL BOTTOMS.

The rapidity with which the rocks are disintegrated, and the finely divided slate into which they are resolved, causes them to be carried off with great facility by the annual floods, even in the present day; but during the greater inundations of the drift period, the scouring out of ravines must have been much more rapidly effected. The result, however, up to the present time has been to form innumerable ravines, mostly having very steep acclivities, and of every depth.

It is very probable that the rocks which once existed in the spaces now occupied, by the ravines and which have been broken up and removed to form them, formerly made up at least one-tenth of the metalliferous district—within one thousand feet of the sloping highlands. * * *

The quartz being the principal vein stone, and partially resisting the action of the atmosphere, is little subject to disintegration. It is, however, liable to be separated into fragments.

This great amount of denudation may be considered practically a natural mining operation upon a large scale. * * * *

Nature has thus liberated the gold and left it among the drift in the ravines and small valleys.

* * * * * * *

It is apparent almost, and might be shown by calculation, that amounts greatly larger than seem to have been produced from the *drift* in the ravines, might have been deposited without there having been a workable vein near them. And the present unartistic mode of operating upon the drift, secures but a small per centage of the gold it contains. For instance, take a medium vein, and a ravine of 1,000 feet deep, and when acclivities are 30°, and we shall find if we assume the vein to be one yard thick, the destroyed portion would be equal to nearly 200,000 cubic yards, weighing more than 4,500 pounds per cubic yard.

If it contained at a mean, gold to the value of one cent to the pound only of the vein stone, (which is a very poor ore) this simple vein should have left near it gold to the value of *nine millions of dollars.* These denudations, from natural causes, have been so immense which swept away the numerous vein stones that once occupied the ravines, and which are so numerous throughout this region, that the quantity of gold set free and distributed in the narrow gulches and ravines may be set down as fabulous. * * * *

When we consider that more than four-fifths of all the gold in the world has been derived from the drift or freed gold, how important it is, aside from the permanent base out of which these deposits were first derived, to investigate this class of mineral resources.

The number of ravines within the area set down and distributed through the various localities designated as metalliferous, and across which veins of auriferous rocks range, cannot fall short of five thousand. Although the acclivities of the majority of them are over 30°, and the depth exceeds 1,000 feet—we will suppose the average depth to be 800 feet, and the acclivity 25°. The process of washing out this great number of ravines complete, would (from the calculations made at the rate of one cent to the pound of the original vein stone of one yard thick and only one vein,) result in obtaining gold to the enormous amount of *thirty-five billions of dollars.**

* Throughout the entire region of country—extending from the Medicine Bow Mountains to the 32d parallel of north latitude—the vein stones crossing the ravines and parallel with the hills are so numerous that, in some instances, they form a plexus or net work. This is the case in the cele-

brated Quartz Hill, forty-five miles west of Denver City, upon which there are seven distinct veins or lodes, viz: The New York, the Illinois, the Mammoth, the Burroughs, the Forks, the Franklin and the Kansas. These have innumerable feeders or *blind* lodes intersecting them at right angles. The same kind of hills appear upon the slopes of the Elk Horn, on the Blue River, and the *Estrandosa*—the dykes being more numerous and the quality of the ores far superior to those found in the Quartz Hill.

This seems to be incomprehensible, yet it nevertheless is true. It is verified by actual demonstration in every ravine that has been worked where the metal occurs.

To obtain such results, we must in working the mines that contain the freed gold, approximate as near as possible the natural operations which first cleared out the ravines. Or in other words, the scale upon which the work is to be done must be as effective, if not equal in power, to the first natural means by which the ravines were scoured out, and made to assume their present position, and confining the washings to such limits that the gold may be collected into machines constructed for the purpose, the *modus operandi* of which will be treated of in its proper place in the present series.

These general remarks, upon the geological condition of the country in question, though brief, suffices to illustrate the main principles to be regarded as forming the basis of such localities, having within their limits deposits of gold and silver.

NORTH EAST. (A) THE ELK HORN MOUNTAINS.

The gold and silver mines of the Elk Horn Mountains are confined to their northern and southern slopes. The chief rivers which drain their slopes are on the north, Eagle Tail River, Blue River, Piney Creek, and the south fork of the south fork of Grand River; on the south, the Un Compadre and its tributaries, Laguna and Estrandosa. These streams are all mountain torrents which have their rise chiefly in lakes situated within parks, or valley-like basins within the range of mountains, excepting Eagle Tail, Blue and Piney Rivers; these last rise by numerous branches in the northern slopes of the range, directly from the melting snows.

The largest of these lakes is called the *Elk Horn Head of the Estrandosa*, and has an elevation of nearly 8,000 feet above the sea.

Water in quantity being the chief lever in mining operations, especially for gold and silver, it becomes one of the first considerations to be noticed, before selecting a location for that purpose.

The slopes of the flanking hills of the Elk Horn Mountains are very precipitous, and the most of the ravines have an acclivity of about 40°, whilst the depth is on an average of about 1,500 feet. This sudden descent from the mother mountain to the foot-hills that borders the valley—although it is more than 75 miles from the summit—affords the greatest facilities for conveying water to the dry metalliferous ravines. The Elk Horn Mountains present to the eye a most rugged appearance when viewed from the distance. Their numerous conical peaks, at all times covered with snow, have the appearance of once being active volcanoes, and the highest ridges culminating in narrow *backbones*, are but little inferior in altitude to the surrounding mountains of the La Plata and San Juan.

The exposed metalliferous regions are found in the flanking hills of either slope about forty miles from the valley, and extend within twelve or fifteen miles of the base of the main dividing ridge. The streams of water that pass through these flanking hills have great fall, and pass through chasms and canons, in many places impassible for man or beast. It is in the intervening ravines occupying the space where the streams flow, the outcrop of veins of gold and silver show the plainest. These ravines are generally dry, or at most have a very feeble streamlet fed by springs, and not in sufficient quantity to enable mining to be carried on extensively. The affluents of the main river that forms the valley everywhere flank the dry ravines, and the bulk of water flowing from the melting snows of the sierras having a superior altitude to the metalliferous ravines, allows the water to be conveyed to the summits of these hills in the mining region, with sufficient fall for all practical purposes.

From the snow line to the base of the foot hills on either slope, the Elk Horn Mountains are heavily covered with pine, firs, cedar and aspen. These forests are the densest in the mining region. The ravines are filled with a thick undergrowth of pine, fir, cedar, willow and aspen.

Before the mining region could be reached by wagons, roads would have to be cut through these forests. The area of the metalliferous region in the Elk mountains is about 900 square miles, or 576,000 acres. On the northern slopes the auriferous deposits predominate, and on the southern the silver ores are the most abundant.

The auriferous vein stones, however, are also to be found associated with the silver. There are localities, however, especially where the carboniferous overlaps the igneous or metamorphic rocks—immense ledges of auriferous argentiferous ores crop out in immense ledges. These localities are on either slope, but the southern slopes furnish the richest ores.

The vein stones containing the gold are numerous, so much so that the ravines and hills are crossed and recrossed as to form a complete net work or *plexus* of veins. These lodes are perpendicular, with but very little dip, and have a southwest by northeast course. They vary in width from three to forty feet. The richest ores taken from the surface were from veins having a width of from four to seven feet.

Generally there is in the centre of these lodes a vein of silver ore, and sometimes argentiferous galena.

Gold bearing quartz is scattered about on the hills and in the ravines throughout the whole district. These fragmentary pieces contain gold in considerable quantity, and some specimens have been found showing the gold found in the quartz in pieces of some size; the sands and drift have gold widely diffused throughout hill and vale, and in all the gulches and ravines.

The silver deposits remain in the rocks in place, and in *placers* where the carboniferous rocks join the metamorphic. This mining region is not occupied, nor indeed has it been thoroughly prospected, the observations being entirely superficial and the prospects taken from the surface; yet these outcrops noticed are so immense and rich in the metals that it gives sufficient assurance for the establishment of mining settlements, having superior advantages over the mines of Pike's Peak or Central City, 45 miles west of Denver City. The Elk Horn Mountains are in Colorado Territory, and about 250 miles distant from Denver City.

In addition to the gold and silver there are large deposits of copper—argentiferous, galena and antimony; these are found associated in most all the lodes with the gold and silver, and in bodies separate and apart from them.

The character of the vein stones is that of a decomposed quartz, (on the surface) intermixed with iron and copper pyrites. In some localities a species of ore called *cascalho*, which is invariably very rich in gold, and having the color of yellow ochre is found, and associated with it. There is always to be found octahedral diamonds, but this character of ore is not as abundant as in the Jumburacrari district. Opals, chalcedony, jasper and other stones are found in abundance, to which may also be added turquoises. Upon the *Un Compadre* and Grand River coal is found in abundance.

The whole region is volcanic, showing in some places immense fissures, the edges of which are composed of a serrated scoriæ having the appearance of once being subjected to great heat. Hot sulphurous springs are met with frequently; salts of soda (carbonate and chlorides) and pottassium are common. Extensive valleys, having rich alluvial bottoms, and table lands and parks growing an abundance of rich grasses are interspersed here and there. The climate is mild and healthy.

The following assays of ores from the Elk Horn Mountain and the *pan prospects* of the *dirt* shows the value of this region, remembering that they are made from the surface:

No. 1.— Elk Horn Gold bearing
400 grs. Head. quartz.
Gold ¼ gr... or to ton of ore...57 oz. 3 dwt. 8 grs.
Loss 397 grs.
Silver a trace.

No. 2.—400 grs. Un Compadre.	Argentiferous Telluret ores.		
	Oz.	Dwts.	Grs.
Gold 1 gr.....or to ton of ore....	81	13	8
Silver 11¼.....or to ton of ore....909		10	0

No. 3.— Swan Lake Head of the Laguna.

To one ounce of the ore pounded and washed with water, 9¼ grs. gold.

There are very rich ores to be taken from the crop of a lode. The gold could be seen with the naked eye in all the specimens, and there seemed to be no opportunity of selecting any better average. The rock as it comes from the vein would average about one hundred and eighty dollars per ton.

PROSPECTS WITH PAN IN THE RAVINES NEAR THE ELK HORN HEAD.

Twenty pans (*two gallons*) of dirt, average depth of digging two feet, average per pan nine cents.

RAVINES NEAR THE HEAD BRANCHES OF THE UN COMPADRE.

36 pans of dirt, average depth of digging 4½ feet, average per pan 43 cents.

Other localities were prospected but no account was kept of the results. These districts prospected have each an area of ten miles square. The *bed* rocks in the ravines and gulches prospected were not reached in any one instance; the shallowest hole dug was one foot six inches and the deepest 15 feet. The character of the drift gold varied in size according to the depth of the digging. Upon the surface and in the sod the gold was very fine dust requiring quicksilver to save it; at the depth of four feet, when the gravel was reached, it was fine scale gold, having a beautiful color and about 890-1000 in fineness; at 15 feet three pieces weighing $1 73 was found to one pan of dirt. The *bed* rock in the ravines lies deeper than in the *Pike's Peak* mines, or those in the Sierra San Juan and La Plata, but the ravines are steeper, and, therefore, have greater fall. From these prospects, but superficially made, it is believed, and not without reason, that large nuggets will be found when the *bed rock* is reached, for in no instance, whilst prospecting within the metalliferous district of the Elk Horn, was a pan of dirt washed without obtaining satisfactory results. As before remarked, the mines are situated about 45 miles from the valley, in some instances they are farther removed.

These valleys are mostly prairie bottoms, and in some instances a large portion of the table lands are sterile, bearing but little else than sage and artemesia; but still upon the immediate banks of the streams there are alluvial bottoms that grow luxuriant and nutritious grasses. These desert places are thickly strewn with silicious pebbles, and occasionally low wet places are met with, presenting a highly alkaline appearance—salt sloughs and springs also are found in the vicinity. Other table lands do not partake of this peculiarity, but afford an abundant pasturage winter and summer. The parks and plateaus within the foot hills, although having an elevation of from six to eight thousand feet, produce good grass, some of them being natural meadows.

As a farming country, there is sufficient available land to support the mining region, but the products of the soil will always command a high price. Wheat, oats, barley, rye, potatoes and all kinds of garden vegetables can be raised upon the alluvial bottoms and rich table lands. The Elk Horn Mountains are between the parallels of latitude 38° and 39° 30′.

The entire region thus described is in a state of nature. No habitation is nearer than 250 miles,

but one trail passes near the mountains, viz: the *sand stone pass trail*. None enters the mountains, except the few paths frequented by the elk, deer, sheep and bear. The immense deposits of gold, silver, copper and other metals, however, will soon draw to this solitary region thousands of the industrial classes.

The Elk Horn Mountains abounds with native fruits. Comprising a most delicious strawberry, red raspberry, two species of gooseberry, (*horned and common,*) three species of currant, (*red, yellow and black,*) and mountain cherry, leeks, wild onions and turnip, oats, barley, and flax are indigenous. The game common to the Rocky Mountains is found also here, with the exception of the bison, this animal is very rare. Antelope, blacktail deer, elk, hare, sheep and bear, (black and grizzly) are very plenty. Black, red, grey, silver grey and golden foxes are quite numerous. The beaver and mink are probably more abundant than in any other part of the Rocky Mountain range. There are three species of wolves, large grey or white wolf, black wolf and the kayote. Upon the desert plains the little prairie dogs have their towns as upon the plains east of the mountains. Wild turkeys and mountain grouse are very plenty. The streams are filled with trout.

AGENCY FOR THE SALE OF

U. S. Five-Twenty Bonds.

PARKE & BOWDOIN,

No. 76 Wall st., cor. Pearl st.

HAVING been appointed Agents for the U. S. 5-20 Loan, we are prepared to receive subscriptions to the above bonds at par. Interest in gold, commencing on the day of deposit. Orders accompanied by draft on this city will receive our prompt attention.

Stocks and Bonds bought and sold on commission at the Brokers' Board. Mercantile paper and loans negotiated.

LOCOMOTIVES FOR SALE.

ONE PASSENGER ENGINE—16 Ton.
ONE SWITCHING ENGINE—12 Ton.
Both 4 ft. 8½ in. gauge.

Both of these engines are in first rate order, and will be sold very low, and are ready for immediate delivery.

Also a new first class Passenger Engine, 28 tons, cylinders 16×24 inches, finished in the very best style.

T. M. TYNG,
61 Cedar st.,
2136 **NEW YORK.**

WILLIAMS & PAGE'S

PASSENGER CAR LAMPS

FOR KEROSENE OR COAL OILS.

THESE Lamps, now in use on a large number of Railroads are very neat and ornamental, and being enclosed in a Brass Case which is firmly secured to the side of the car, **entirely avoid the dripping of oil on Passengers and Car Cushions.**

The Light is very strong and brilliant, requiring no reflectors and **lighting up** the Cars so as to give them that bright and cheerful appearance so much desired by roads for the pleasure and comfort of their Passengers. These Lamps are strong and durable, and are as easily taken care of as any in use. A full sized drawing sent when requested.

For Cars with "raised" or "high" roofs we make these Lamps with brass arms to suspend in any required manner.

Manufactured and for sale by

WILLIAMS & PAGE,
67 Water st.,
Boston, Mass.

THE NEW YORK CENTRAL R. R. CO.

TREASURER'S OFFICE, ALBANY, July 23, 1863.

TWENTIETH SEMI-ANNUAL DIVIDEND.—The Directors of this Company have declared a Semi-Annual Dividend of THREE AND ONE-HALF per cent. on the capital stock thereof, free of the United States income tax, payable on the twentieth day of August next, on stock registered at New York Boston and Albany, respectively, and on the twentieth day of September next on stock registered at London.

Dividends in New York will be paid at the office of DUNCAN, SHERMAN & Co.; in Boston, at the office of J. E. THAYER & BROTHER; in Albany, at the ALBANY CITY BANK; and in London, at the UNION BANK OF LONDON, pursuant to circular and notice of December tenth, 1862, from the Transfer Office in that city.

The Transfer Books at New York, Albany, and Boston will be closed at the close of business on Friday, the thirty-first day of July instant, and be re-opened on the morning of Monday, the twenty-fourth day of August next.

JOHN V. L. PRUYN,
6131 Treasurer.

HOWES & MACY,
BANKERS.

NEW YORK, August 25, 1863.

The subscribers having retired from the offices of President and Cashier of the Park Bank (which positions they have held since its organization), have established themselves in the Banking business at No. 30 Wall street (in offices recently occupied by J. J. Cisco Esq., Assistant Treasurer U. S.)

We are now prepared to receive accounts, and deposits with us can be checked for the same as with any of the city banks.

Interest will be credited to our dealers on their daily balances on the 1st January and July, at the rate of **three per cent.** per annum.

Particular attention will be given to Collections on all accessible points in the United States and Canada, on the most favorable terms.

Orders for the purchase or sale of all kinds of Government and other securities will be attended to promptly.

SUBSTITUTE FOR
CAR DUCK.
Kingman's Car Covering.
THIS is a heavy Canvass imbedded in a coat of Elastic Mastic or Paste which is applied directly to the boarding of the top of the car, and then thoroughly painted with three or four coats of paint, thus making a covering VERY MUCH LIKE CAR DUCK, but at this time at half the cost. It is now successfully used by many Railroads and Car Builders. Directions and particulars sent when requested. This Mastic and Canvass for sale by

NEW YORK CENTRAL RAILROAD CO.

TREASURER'S OFFICE, ALBANY, Aug. 14, 1863.

SEALED proposals will be received by this Company until 3 o'clock in the afternoon of the 10th day of SEPTEMBER next, for the purchase of its Coupon Bonds (of $1,000 each) to the amount of ONE MILLION OF DOLLARS, (to meet, in part, the debt of Three Millions of Dollars which will become due on the 15th day of June next) bearing interest at the rate of SIX PER CENT. per annum, payable semi-annually, in the City of New York, on the 15th day of June, and the 15th day of December in each year, and the principal payable on the 15th day of December, in the year 1887.

Proposals indorsed, "Proposals for Six Per Cent. Bonds," may be addressed to the undersigned at this office, or at the Bank of Commerce, in New York, and may be for any amount not less than $5,000.

The Directors reserve the right to reject any proposal and no conditional bid will be received.

A deposit of five per cent. on the amount must accompany each proposal. In the case of rejected bids this deposit will be returned without delay, and in the case of accepted bids, interest will be allowed thereon at the rate of six per cent. per annum from the 10th day of September until the 1st day of October next, when the Bonds will be ready for delivery, on payment of the balance of ninety-five per cent. In case of failure to pay such balance, the deposit of five per cent will be absolutely forfeited to the Company. The first Coupon will be for the amount of interest ($12 50) to accrue from the 1st day of October to the 15th day of December next.

A sinking fund of two per cent. per annum on the amount of the loan will be applied to its reduction, or to providing means for its payment, in such manner and under such regulations as the Directors may from time to time adopt.

3t34 JOHN V. L. PRUYN, Treasurer.

PROPOSALS FOR CONSTRUCTING A BRICK TUNNEL UNDER LAKE MICHIGAN, TWO MILES LONG, FOR THE CITY OF CHICAGO.

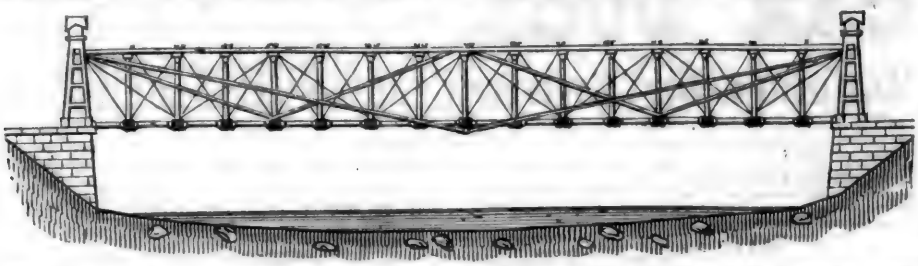
OFFICE OF THE BOARD OF PUBLIC WORKS, CHICAGO, August 13th, 1863.

Sealed Proposals will be received at this office till Wednesday, September 9th, at 11 o'clock A. M., at which time the Board will open the same, for doing all the work and furnishing all the materials required for the construction of a brick tunnel, five feet clear diameter, and extending from the present pumping works of the city, two miles out, under the bed of Lake Michigan, and through what numerous borings invariably show to a stiff blue clay soil, together with land and lake shafts, and protecting cribs, in accordance with the plans and specifications for the doing of said work, to be found on file in the office of this Board on and after the 19th inst.

The Board would prefer to let the entire work to one contractor or company, but will receive separate proposals for the tunnel proper and land shaft, for the protecting cribs, and for the cast iron cylinders for lake shafts.

The Board reserves the right to reject any or all bids, and to accept any one bid complying with the conditions of this advertisement.

The bids must be sealed, and must be accompanied with a bond of the penal amount of $200, blanks for which will accompany the specifications, guaranteeing the execution of a contract in accordance with the bid, in case the bid is accepted.



Proposals must be directed to the Board of Public Works, and indorsed "Proposals for Lake Tunnel."

Satisfactory security for the faithful performance of the work will be required of the parties whose bids may be accepted.

J. G. GINDELE,
FRED. LETZ,
F. C. SHERMAN,

MUNN & CO'S
PATENT OFFICE.
ESTABLISHED 1842.

DURING the past twenty years, Messrs. MUNN & Co., in connection with the publication of the WEEKLY ILLUSTRATED SCIENTIFIC AMERICAN, (the only paper devoted to the Mechanic Arts in the country,) have acted as Attorneys for procuring letters patent in the United States and all foreign countries.

They would state that they have acted, during this period, as agents for more than

TWENTY THOUSAND INVENTORS;

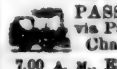
In fact, they have become identified with the whole brotherhood of inventors and patentees, at home and abroad. Thousands of inventors for whom they have taken patents have addressed to them most flattering testimonials; and the wealth that has inured to the inventors whose patents were secured through their office, and afterward illustrated in the SCIENTIFIC AMERICAN, would amount to many millions of dollars!

Messrs. MUNN & Co. are prepared to attend to patent business of all kinds, in the quickest time and on the most liberal terms.

For further information, send for a pamphlet which contains the Patent Laws of the United States, and much other valuable information of importance to inventors and all others who own patent property. Also pamphlets of information furnished regarding the Patent Laws of all foreign countries.

For further particulars address

MUNN & CO.,
No. 37 Park Row, New York,



Or **corner F and 7th sts., opposite Patent Office, Washington, D. C.** 3m35

Williamsbridge—5.30 A. M. and 7.05 P. M.

Croton Falls, White Plains and Williamsbridge trains stop at all stations.

JOHN BURCHILL, Superintendent.

SMITH'S
Railroad Air Light Comp'y.

THIS COMPANY OWNS THE EXCLUSIVE RIGHT of **SMITH'S AIR LIGHT FOR RAILROADS,** and is prepared to sell to Roads the right to use the same. We have arrangements perfected for furnishing Lamps and Burners at about the same price charged for the Oil and Kerosene Lamps by other Manufacturers.

That Railroad Managers may know the value of this LIGHT, we annex letters from the Hon. CHAUNCEY VIBBARD, the General Superintendent of the New York Central Railroad, and also from the Master Mechanics of the same road, showing its comparative cost with that of Oil Lights:

NEW YORK CENTRAL RAILROAD,
GENERAL SUPERINTENDENT'S OFFICE,
ALBANY, November 15, 1862.

TO THE MANAGERS OF RAILROADS:

Gentlemen,—This Company has adopted and is furnishing all their locomotives with the "SMITH AIR HEAD LIGHT."

They do this both on account of economy and the very superior light it affords.

We regard it as vastly superior to any light that has ever been produced, and commend it to the consideration of railroad managers.

Very respectfully, etc.,
C. VIBBARD, Gen'l Sup't.

NEW YORK CENTRAL RAILROAD,
MASTER MECHANIC'S OFFICE,
WEST ALBANY, January 28, 1863.

DR. GEORGE HAND SMITH:

Dear Sir,—Below please find the cost of locomotive lamps burning oil on this division.

Supposing oil cost $1 57 per gallon.

Cost per hour, 5 cents.

Cost of wicks, chimneys, per year, $4 80.

Estimate cost of leakage, gumming and overflow, one-fourth of the consumption.

In the year 1861, when the lamps were all oil burners, the cost of repairs were $10 20 per year.

You will please add the overflow to the actual cost per hour, which would make 6.25 per hour.

Your most ob't servant,
EDWARD H. JONES,
Master Mechanic, Eastern Division.

300 days, 5 hours each day, 1,500 hours, 6¼c. per hour	$93 75
Repairs of lamps for one year	10 20
Wicks and chimneys	4 80
	$108 75

NEW YORK CENTRAL RAILROAD,
MASTER MECHANIC'S OFFICE,
ROCHESTER, Feb. 2, 1863.

DR. GEORGE HAND SMITH:

Dear Sir,—In answer to your inquiries in reference to your Air Light, I would state that we have upon this division of the road 28 of your lights on our first class passenger and freight engines. I find the light consumes about five feet of common gas per hour, which, at the price of gas at this place, $2½ per thousand, makes the cost of light for each engine 1¼ cents per hour.

Renewing my often expressed opinion that your light, for its reliability, its economy and superiority, far exceeds any light heretofore used on engines,

I remain, very truly, yours, etc.,
DAVID UPTON,
Master Mechanic, Western Division.

300 days, 5 hours each day, 1,500 hours, 1¼c. per hour	$18 75
One-sixth waste of gas	3 12
Repairs of lamps for one year	5 00
	$26 87

Further information may be obtained at the office of the Company, **31 Nassau st.,** or by addressing

CHAS. W. WELSH,
Secretary.

New York, Saturday, September 12, 1863.

Colorado Territory.—Its Indigenous Elements of Wealth.

This is a new commonwealth, square in form, which bridges the immense back bone of the American continent and unites the systems of the two oceans. Located between the 37° and 41° parallels of latitude and 102° to 109° meridians, its area is one hundred and seven thousand square miles, or 68 millions of acres.

This State is bisected through from north to south by the primeval Cordillera, whose summit corresponds very nearly with the 106° meridian: this summit is equidistant from the cities of St. Louis and San Francisco and divides asunder the waters which flow to the Mississippi river and to the Pacific ocean.

Of Colorado thus one-half of the area slopes to the East, the other half to the West. The eastern half expands upon the level of the Great Plain: the western half is filled with stupendous mountains. The Plains and mountains meet abruptly along a north and south line, which is straight and regular.

The mountains are intensely metalliferous both of the precious and base metals. The plains are of fertile, *arable* soil. Both mountains and Plains are uniformly *pastoral*.

These three bases of industry exist distinct from one another, but blended within the same area: MINING; PASTORAL agriculture; ARABLE agriculture. From each as a distinct foundation grow commerce and manufactures.

The Cordillera occupies in its primeval bulk, an area of forty thousand square miles, which uniformly contains gold, *in situ*. The lower levels, receiving the drift washed down from the mountain flanks, have float gold.

The *rivers* fed from the central snows and radiating in all directions are remarkable for their size, number and abundance of water. All the industrial departments will derive from them ample supplies and sustenance, universally distributed.

The average altitude of the whole area above the sea level, is one mile. Some of the mountains exceed three times this altitude.

The *climate* is yet the distinguishing feature of Colorado and infuses into animal life and vegetation and nature a higher order of vitality than is elsewhere seen. Brilliant sunshine never fails and combines with the tonic taste of the atmosphere to inspire a constant flexibility of the mental and physical powers. The facts which explain the peculiar features and excellence of the climate are altitude above the sea; remoteness from the sea and the latitude. These produce, as it were, a fusion of the extremes which alternate in maritime climates, and give here a perpetually vernal atmosphere and temperature.

The area therefore which has been included within the lines of the future State of Colorado, embraces a geographical position of commanding excellence and physical features. Here is the broadest margin of the elementary principles which excite and sustain industry, combined with the widest range in their variety. A permanent concord of energies, developed on a vast scale, is the prospective condition of this commonwealth of the primeval mountains.

Railway connections are rapidly creating themselves and the growth of all things will have no delay.

The great Parcs of Colorado, constitute a wonderful feature of our continent, and one new to mankind. These are four in number and are grouped within the *dorsal* mass of the Cordillera. They resemble in juxta-position and area the four upper Lakes of the St. Lawrence basin. They are the sources of the four great rivers, the North and South Platte, the Rio del Norte and the Colorado. They are the counterpart of the basins of Geneva and Constance contained within the Alps, but immensely surpassing these latter in area and having pavements of fertile prairie in place of a water surface. Each is an amphitheatre, encircled by snowy mountains, traversed by innumerable confluent streams and each bisected by the great river formed from their aggregate waters. Their discharges open alternately to the Atlantic and Pacific slopes. They are embraced within the auriferous parallelogram and lie from north to south, so as to be consecutively bisected by the 106° meridian. Excellence of climate and sublime scenery here reach the highest standard of grandeur and beauty. Intercommunication is provided for by depressions in the Cordillera, both convenient and smooth for transit. The novelty to the popular mind of these immense basins, elevated above the world, perfectly fertile, of an atmosphere and soil propitious to agriculture and heretofore so secluded, renders a minute description most difficult. Yet our continent has nothing upon its variegated area more redundant with fascinating attraction, or more tempting to the ambition of progress.

The journal of Dr. Willing is full of startling facts sustaining these views and predictions.

La Crosse and Houston City Railroad.

Commissioners have been in this city for some time passed, charged with negotiating for capital to "complete twenty miles of railroad between La Crosse, Wis., and Houston City, Minn., already graded, bridged, and ready for the superstructure, at the eastern terminus of the Root River Valley and Southern Minnesota Railroad. The road of which this is the last link runs through the best and most fertile portion of the State of Minnesota, and a land grant of 3,840 acres per mile is secured to the company by act of Congress, and a large and valuable portion of which will come at once into market on the completion of the above twenty miles."

Railroad Traveling at Home and Abroad.

That great improvements are yet to be made in our system of railway traveling, we have not the least doubt. That some of them have not been adopted long before this, is unquestionably owing to the circumstance, that most of our railways have had so hard a struggle for existence, that their managers had no thought of expending money on what may be called perhaps the esthetics of the system. The pleasurable sensations and comfort of passengers were postponed for the more immediate consideration of how to get net earnings, and keep up a good show in Wall street. This necessity however, no longer exists. Our railways have enjoyed an extraordinary prosperity for the last two or three years. They are no longer suppliants for discounts, indorsements, guarantees, and bank accommodations, creating a corps of financial agents to raise money at any cost, and at all hazards, but they have been making money in a legitimate way, have paid off their debts, astonished their stockholders with dividends, and are prepared to take the position of honest securities and good investments. Substantial success having been gained, there is now opportunity for further improvement, and in no direction can it proceed with more advantage than in adding to the security and comfort of passengers. There is no freight so valuable as the human body. It pays well, and takes care of itself. It is entitled in every way to much consideration, and when it is injured through the carelessness of railway management, the damage when assessed in our courts is found to be heavy. Yet notwithstanding there is so much room for improvement, we have the satisfaction of knowing, that in most respects, our system is far better than that which obtains abroad. In the details of management, we have no doubt we are far superior. There is a natural cleverness in the American mind which fits it for work, where intelligence, observation, calculation and accuracy are indispensable. Nowhere will you find more intelligent, and well informed mechanics, machinists and engine drivers, than on our American railways. They are far above mediocrity in every particular, and their ingenuity, equal to every demand upon it, never fails them under any circumstances. Our cars are unquestionably the most suitable for general travel, and have many conveniences not known abroad; where with the exception of the German railways, the rigid system of little lock up carriages continues to prevail, and there is no way in which a passenger can escape in case of accident. But far as we are in advance of our British friends, we may still improve. There is no reason whatever why traveling in a car should not be as easy, as in the most luxurious and well hung carriage. The seats which are now rigidly fastened to the floors might be placed upon springs, and the motion which is now felt through all the nerves of the body, be neutralised into that which we feel in a swing. We imagine this change will become indispensable. Medical authorities abroad, are beginning to speculate on the effects of railway traveling, as regards health. The opinion is obtaining, that those persons whose lives are passed upon railways are subject to material derangements of health. We are informed that conductors even on our city cars are subject to varicose enlargement in their limbs, and that spinal affections are the consequence of constant travel on the trains, even to ordinary travelers.

We therefore hope to see an improved seat in our railways, which shall completely isolate the passenger from the shock, and continued vibrations, which are now felt through the whole body, in our cars when in motion. But our subject was not so much to speculate on what improvements have yet to be made, as to contrast our system with that of England. And to do so we have only to adopt their own language. We find in the London *Daily News* of the 6th August last, a carefully considered article on railway travelling in that country, which is both curious and suggestive.

"The peculiarity of railway traveling in England is that all the ingenuity and activity of its organizers and directors uppear to have been exhausted in adding to risks which are inevitable, the aggravation of every danger and discomfort that the commonest caution or consideration, for the lives and limits of their fellow creatures might prevent, and does in fact in other civilized countries, continually and systematically prevent. It is not enough that whenever a train approaches a station, the lives of hundreds of human beings are at the mercy of an over worked or sleepy points man; that as it happened a day or two since on the Lynn and Hunstanton line, a bullock may stray across the rails and avenge its stupid fate, by turning half a dozen carriages completely over, and crumpling up their innocent occupants; but by that coarse and careless indifference to any thing but fares and dividends, which is characteristic of railway administration in this country; some single passenger may be shut up like a felon and carted along like a sheep to the slaughter, or left to be burnt alive, or murdered in a tunnel, or assassinated in the midst of a smiling landscape, without hope of aid or escape or appeal. Surely while we are criticising with all the severity of people who own an inexhaustible *store of genius at the Horseguards*, the military short comings of our kinsmen across the Atlantic, *it might be well for us* to pause for a moment to compare the humane provisions for the safety of life on an *English* railway with those which are adopted on no less than 35,000 miles of railway in North America.

"There we find an uninterrupted communication along the line of cars, not only between the guards and passengers, and between the guards and the engine driver, but between every carriage and the engine, by the simple means of a signal rod within reach of every passenger. Nor is it practically found that this elementary precaution is abused by the vulgar folly of idle hoaxers. Yet no Railway Company in this country has thought it worth the trouble or the expense, or perhaps worthy of its dignity, to imitate so sound and sensible an example; our Legislature with all its *ceaseless Pharisaic babble*, and its *religious respect for vested abuses*, has done nothing to correct the barbarism of irresponsible companies; our smirking Board of Trade goes to sleep on its circulars, and railway traveling in England, is still to railway traveling in the United States, what an English Mail Coach was, compared with a french diligence thirty years years ago. Our railway carriages are crammed like cattle pens, the trains are sent madly rushing on each others' heels, and here and there in provincial districts *kept waiting* for the arrival of some local and unpunctual lord or baronet. Smoking is forbidden, and yet every carriage reeks with stale tobacco; gratuities to the company's servants are forbidden, and you cannot get your baggage looked at unless the porter sees a shilling in your eye. If you chance to be put into a carriage *tete a tete*, with one other meek and silent passenger whose brain is muddled, or whose nerves are trembling with suppressed mania, you are liable to have your throat slit, or your breath stopped, by some candidate for a mad house, who chooses to regard you, as you sit unconsciously dozing or reading, as a deadly foe meditating a murderous assault, or at least as the author of all his imagined miseries. Such things are not fancies, but *facts of repeated, of recent occurrence.* Yet our railway companies go on, ruining shareholders, massacring their passengers, treating the public as so much "rolling stock," and not even the simplest and most obvious means of preserving life, and preventing the most hideous catastrophes, are deemed worth a moment's discussion by any board of directors. A hundred years hence our descendants will speak of British railway traveling in the 19th century as we speak of British coach traveling a hundred years ago. This is the "dead season," in other words the season of railway accidents; and the voice of the press, cannot perform a better public duty than to cry aloud the scandal of our railway system to the civilized world."

Maine Central Railroad.

FORMERLY ANDROSCOGGIN AND KENNEBEC AND PENOBSCOT AND KENNEBEC RAILROADS.

The earnings and expenses of this road for the years ending May 31, 1862 and 1863, have been as follows:

Earnings:	1862.	1863.
From passengers.	$130,316 32	$178,847 36
" freight.....	106,040 30	125,614 81
" express, mail, etc.	17,885 64	18,569 78
	$254,242 26	$323,031 95
Expenses, viz:		
Repairs of track	$45,295 19	$48,000 64
" equipment .	13,923 30	27,609 42
" build'gs, etc.	5,327 80	6,397 54
Train expenses.....	13,453 03	13,317 78
Station expenses.....	13,768 44	15,057 26
Fuel	17,001 52	18,801 95
Oil and waste.....	2,318 69	3,597 21
All other expenses.....	11,469 65	9,452 26
	$124,557 62	$149,003 46
Net earnings	$129,684 64	$174,028 49

A comparison of the earnings of the past with those of the preceding year shows an increase of $68,789 69, with an increase in expenses of $24,445 84—making the increase in net earnings $44,343 85. The report says:

In presenting this first Annual Report of the Maine Central Railroad Company to the stockholders, the directors congratulate them on the completion of the plan of the projectors of the railway between Portland and Bangor, through the central part of the State. At the first meeting of the stockholders of the Androscoggin and Kennebec Railroad Company, a resolution was adopted, that measures be taken to aid in the construction of the Penobscot and Kennebec road, with the view to its ultimate union with the road of the former company, thus making by connection with the Atlantic and St. Lawrence road, a railroad from Portland to Bangor, on the same gauge and under the same management. This object, always kept in view by the projectors and stockholders of the two roads above referred to, was only attained on the 28th of October last. It is unnecessary to narrate a history of the obstacles thrown in the way of its completion, by adverse interests, in the Legislature.

It required six years of effort in the legislature to obtain a simple act of legislation to authorize two corporations, having a common interest, and each desiring it to be united in one.

The act of consolidation, as finally amended, the charters of the two corporations, whose roads are embraced in this one, together with the agreement for consolidating the two companies, now constitute the charter of this company, and have been published and circulated among the stockholders.

At the time of the consolidation each company was indebted, and had mortgaged its road. The Androscoggin and Kennebec Company had mortgaged its road, to secure the payment of bonds issued prior to 1860, and outstanding to the amount of $179,457 and in 1860, payable in thirty years to the amount of $1,100,000, and there were outstanding $431,800 of the bonds of said company convertible into stock in July, 1863, and $278,200 of like bonds, convertible into stock in 1864 and 1865, all said bonds bearing interest at six per cent. There was also a floating debt to the amount of $170,990 37, outstanding at the same time.

The Penobscot and Kennebec Company had mortgaged its road, 1st to the City of Bangor to secure the amount of $800,000 and 2d to secure $300,000 of bonds due in 1870, and 3d to secure $156,600 of bonds due in 1871, all bearing interest at 6 per cent. In addition to this there was a floating liability for a large amount.

The interest on these 2d and 3d mortgage bonds for several years was due and unpaid, and the holders of these bonds had taken preliminary steps to foreclose these mortgages.

Preparatory to and as a preliminary, to the consolidation of the two roads, an arrangement was entered into by the principal holders of the 2d and 3d mortgage bonds of the Penobscot and Kennebec Company, that, if parties would subscribe for and take at par, bonds of the Maine Central Railroad Company to be issued and secured by mortgage upon the entire line, to the amount of seventy-five thousand dollars, the second mortgage bond holders would surrender to the new company their overdue coupons and take the amount due thereon in the same class of mortgage bonds of the new company above referred to, at par; and that the holders of the 3d mortgage bonds would surrender their bonds and overdue coupons thereon, and take forty per cent. of the amount thereof in said bonds of the new company at par, and the balance in the stock of the new company at par. Accordingly the seventy-five thousand dollars were taken and paid for by various parties, and the amount obtained therefor, appropriated to pay certain liabilities of the Penobscot and Kennebec Company for land in Bangor in and about their depot grounds, and for other liabilities of said company to the City of Bangor for overdue bonds and coupons. These third mortgage bond holders in accordance with said arrangement, have surrendered their bonds and coupons and taken the bonds and stock of the Maine Central Railroad Company in payment therefor, with the exception of the amount of five thousand eight hundred dollars, the holders of which are as yet, unknown, and no person is known to have refused to come into the arrangement.

The holders of the 2d mortgage bonds, for nearly the whole amount, have surrendered their overdue coupons and taken the bonds in payment therefor, or have deposited their coupons to be surrendered and so paid, when the balance outstanding can be obtained.

By the terms of consolidation the new company owns all the property, rights, privileges and franchises, and assumes all the liabilities of the two old ones, and are to perform all their duties under their respective charters.

The Maine Central Railroad Company, therefore, at the close of the financial year (May 31, 1863,) owns the railroad from Danville Junction to Bangor, a fraction less than one hundred and ten miles in length. Upon it are twenty-one stations, with the buildings necessary to transact its business; three engine houses, and three turntables—with the shop and tools for repairs, at Waterville. They have also, the rolling stock which belonged to each of the old companies.

The financial condition of this company at the beginning of the current year (June 1, 1863,) as will more fully appear from the report of the Treasurer hereto annexed, so far as liabilities are secured by mortgages upon the road, or any part of it, are concerned, may be briefly stated, as follows:

For bonds of the A. & K. R. R. Co. issued prior to 1850	$25,557
For bonds of the "Million Loan," authorized in 1850	61,800
For bonds of the $1,100,000 loan of 1860, on 30 years, amount sold	1,050,400
Balance due on the loan of its bonds by the city of Bangor to the P. & K. R. R. Co. on which interest has been paid up to April, 1863	720,000
On 2d mortgage bonds of the P. & K. Co.	300,000
For the bonds of the Maine Central Railroad Co, which have been sold, (400,000 having been authorized)	171,500

Besides these there are outstanding of the A. & K. R. R. Co. bonds for $431,800 convertible into stock of said company at the par value thereof, in July, 1863; and $278,200 of like bonds convertible in 1864 and 1865, on which interest at 6 per cent. is payable in money. By the terms of consolidation, the holders of these stock bonds can receive the stock of the Maine Central Railroad Company instead of the stock of the Androscoggin and Kennebec Railroad Company.

Beside the beforementioned liabilities, there are bills payable amounting to about $129,220 51, and overdue coupons which have not been presented, which liabilities it is expected will be paid from cash on hand, and from what may be realized from the sale of the bonds of the Maine Central Railroad Company.

The earnings of the line for the last year show a gratifying increase on those of the previous year. With the affairs of the country in such an unsettled condition, the increase is greater than could have been expected at the commencement of last year.

The relations of your company to those with which it has business connections, remain as in the past. The bill in equity commenced in 1861 against the Androscoggin Railroad Company, to compel a restoration of the gauge between Leeds and Farmington, is pending, and to be argued at the law term of the Court at Augusta, June term, 1863.

The traffic of the road has been conducted with success, the trains have been run with regularity, and without injury to any one, for which great credit is due to the skillful arrangements of the superintendent, and the care and attention of those whose duty it was to carry them out.

The number of miles run by passenger trains has been 76,685; by freight trains, 84,915; by all other trains, 24,640—total, 186,240, an increase over the previous year of 14,647 miles. Passengers carried, 107,552; freight transported, 62,155 tons.

The standing of the company is shown by the accompanying general account.

Of the million loan bonds, Androscoggin and Kennebec Railroad Company, $61,800 are outstanding, and are to be taken at par in exchange for bonds of $1,100,000 loan, as they fall due.

The bonds of $350,000 loan are over due, and are to be paid in cash, or by exchange for other bonds.

The $1,100,000 loan bonds were issued from August 1, 1860, to September 1, 1861, on 30 years, and are to be paid in cash.

The stock bonds are convertible into stock at maturity, $431,800 of which mature the first day of July next, and the balance prior to December 2, 1864.

The first and second mortgage bonds, Penobscot and Kennebec Railroad Company, are cash bonds.

The third mortgage bonds, of which $5,800 are outstanding, are to be paid 40 per cent. in bonds, and 60 per cent. in stock of this company, when presented at this office.

The $400,000 loan bonds of this company, of which $171,500 have been sold, were issued from December 1, 1862, to May 1, 1863, on 8 years, and are cash bonds.

The stock coupons are to be paid in stock, and the interest scrip in bonds of this company.

GENERAL ACCOUNT.

Capital stock		$1,050,860 02
Million dollar loan		61,800 00
Bonds of $350,000 loan		25,557 00
" 1,100,000 loan		1,050,400 00

	$65,404 47

President.—WILLIAM GOODENOW.
Treasurer.—J. NYE.
Superintendent.—EDWIN NOYES.

Grand Trunk 1st Preference Stock.

The Company do not pay the interest on the 1st preference bonds, deducting the 1s. in the pound to cover the income tax and the interest charges. The bankers of the Company are the parties cashing the 1st preference bond coupons at this rate, anticipating that the company will be in a position, when the accounts are made up in September next, to pay the 1st preference interest.

If the Company were now paying the interest, that of the 1st preference stock would be paid along with the coupons of the 1st preference bonds. If, however, a 1st preference stockholder desired to have his interest now, with the same deduction as is made from the 1st preference bond coupons, he can get it.

No doubt in September next the 1st preference stockholders will receive their interest less income tax only.

There is practically no difference between 1st preference stockholders and 1st preference bondholders, except that the former after ten years will be 6 per cent. forever, and the latter will not, being eventually paid off at par, unless they

elect to convert within five years into 1st preference stock. This 1st preference stock is in fact so much of first preference bonds converted into it, and will hereafter be in much greater favor than the bonds, owing to the perpetuity of the 6 per cent., the right of voting and speaking which it carries, and its registration.—*Herapath.*

Trains Passing Through an Open Country--Law as to Speed.

RUNNING AT A HIGH RATE OF SPEED, THOUGH DANGEROUS, IS A REASONABLE USE OF A RAILROAD. REASONABLE AND PROPER CARE, ONLY, REQUIRED OF COMPANIES TO AVOID INJURIES TO CATTLE.

The following action, between the *Central Ohio Railroad Company and one Albert G. Lawrence*, was recently determined by the Supreme Court of Ohio; it involved a consideration of the degree of care required of railroad companies in running their trains through an open or unfenced country, where cattle are liable to stray upon the track. The plaintiff claimed damages for injuries to his stock.

At the trial of the case in the Court of Common Pleas, testimony was given to the jury on behalf of the plaintiff, showing that certain of the plaintiff's cattle were injured and killed by a train of cars transporting passengers, running as a passenger train upon the railroad, at the time and place stated in the petition of the plaintiff; and also testimony tending to prove that said killing and injury resulted from the negligence of the servants of the defendant in charge of the train, and also testimony tending to show that the train was running at a speed which was unusually fast for that train at that place.

On behalf of the defendant, evidence was given, tending to prove that when the said cattle were injured it was in the night season; that the train was behind time; that it was expected the train would meet another train going in an opposite direction, about one and a half miles from the place where the cattle were injured, within a few minutes from the time of the injury; and that the trains had connections to make with other passenger trains; that the trains was running little if any faster than usual; and that on a track like that where the cattle were injured, running the train faster than the usual rate of speed, would not increase the danger to cattle, that might be on the railroad track in the night season.

The Court then charged the jury as follows.

"That the defendant was not liable, unless the injury was the direct result of the negligence of the agents of the defendant, and the burden was on the plaintiff to prove the negligence. That if the jury became satisfied from the evidence that the cattle of the plaintiff were killed by the cars of the defendant running against them, when they were on the track of the railroad of the defendant, and said cars were employed in carrying passengers on said road, and that when the cattle were killed the cars were being run faster than the usual or ordinary speed of that train at the place of the injury, and that such unusual speed contributed directly to the injury, and was not rendered necessary by some such important object as to avoid a collision, or to make a connection with some other train, then the verdict must be for the plaintiff. That one of the considerations to determine the rate of speed at which cars may be run, is the fact, that cattle are liable to stray upon the track of unfenced railroads, or roads only partly fenced, and in determining whether the train shall be run at an unusual speed, except when the speed shall be necessary in order to avoid a collision, or to make a connection, or to attain some such desirable end, the agents of the company must consider and take into consideration the danger to cattle consequent upon such unusual speed. But the defendant cannot in any case be held liable because of unusual speed unless it shall appear that such unusual speed contributed directly to the injury."

A verdict having been rendered for the plaintiff, the defendant appealed to the District Court, which affirmed the judgment of the common pleas; and then appealed to the Supreme Court of Ohio, which now reverses the judgments of courts below. The following is the opinion of the Supreme Conrt, rendered at the decision of the case:

GHOLSON, J.—The relation, toward each other, of a road, and the owners of cattle has been settled by several decisions of this court. The difficulty now is in the application of the principles established by those decisions.

The owner of cattle, found on an unfenced railroad, is not to be regarded as a trespasser or wrong-doer, but is entitled to the exercise of ordinary and reasonable care, under all the circumstances to avoid any injury to his cattle. A railroad company, like any other landed proprietor, has a right to the free, exclusive and unmolested use of its railroad track, not exempt, however, from the duty of so using its own property as to do no unnecessary injury to another, and bound when using its property in a mode which may result in injury to another, to the exercise of due care. If a railroad company is in the reasonable use of its railroad track—its own property—with reference to any rights of others, and on the occasion of an injury to cattle found on the railroad track, exercises reasonable care, under all the circumstances to avoid the injury, it cannot be held liable to the owner of the cattle. But if as to any right of such owner, the use being made of the railroad track is unreasonable and dangerous, or there is a want of proper care to avoid injury to his cattle found on the track of the road, and there is injury resulting from such unreasonable and dangerous use of the railroad track, or from such want of care, the railroad company will be liable therefor to the owner.

The question is, what as to the owner of cattle, is to be regarded an unreasonable and dangerous use of its railroad track by the company? It is certainly not enough that the use should be dangerous, it must also be unreasonable, and that with reference to some right of the owner of the cattle. The very object of a railroad is the transportation of persons and property at a high rate of speed, by means of ponderous engines and cars, and this must necessarily be dangerous to cattle coming on the track. That the owners of cattle have no such right or interest in the unenclosed lands of their neighbors, as to entitle them to claim that its use for a railroad is unreasonable, is settled by the decisions to which reference has been already made. Have they any right to complain as to the degree of speed at which it may be the interest of a railroad company to transport persons and property, and at which persons may be willing to have themselves and their property carried on a railroad. We do not think that they have any such right; and the admission of such a right would be inconsistent with the progress of improvement in facilities for travel and commerce, with which progress such a right as that of an owner of cattle to have them run on the unenclosed lands of others ought not to interfere. In determining, therefore, the rate of speed at which its trains shall run, the same being otherwise reasonable and proper in view of the object to be accomplished, we do not think a railroad company is bound to consider the increased risk to cattle on its track, which may be thereby occasioned, and lessen the speed on that account.

The use on land of engines and cars running on a railroad track, at a high rate of speed, though dangerous, is a reasonable use of land, because it is for a proper object, and a highly beneficial purpose, and the danger may be avoided by proper care. There is certainly a risk to cattle running at large in the vicinity of an unenclosed railroad track, but this risk the owners of cattle must take unless they choose to avoid it by keeping the cattle within their own enclosures. If they do not choose to do this, they can ask no more than that the agents of the railroad company in the legitimate conduct of its business, running its trains with a speed regulated by the grade of its road, the capacity of its locomotive power and the safety of the persons and property carried, shall with due regard to the safety of persons and property in their charge, being the paramount consideration, exercise what, "in that peculiar business would be ordinary and reasonable care to avoid unnecessary injury to animals casually coming upon their unenclosed road," 3 Ohio St. Rep. 173. Where there is nothing in the running of a train, or its rate of speed at a particular time and place, inconsistent with the general and legitimate conduct of the business of the railroad company, we cannot see how the occasion and necessity therefor can properly concern an owner of cattle running at large. He cannot properly discuss with the company the proper exercise of the discretion vested in its agents as to the time or occasion of running its trains, and has no right to bring forward its time table and list of connections, and enter into an inquiry whether the rate of speed was greater than usual for a particular train, at a particular place, and whether such rate of speed was necessary to make a connection or avoid a collision, or for some other proper object.

No evidence is referred to in the bill of exceptions which shows that the rate of speed at which the train was running was a rate at which the railroad company in the ordinary and legitimate conduct of its business, might not reasonably and properly run its trains. Such being the case, we think the inquiry should have been limited, in accordance and in connection with the rights and liabilities established in such cases, as in the case of the C. C. & C. R. R. Co. *vs.* Elliott, 4 Ohio, 474, to the question "whether under all the circumstances of the case, the defendants exercised reasonable and proper care in running their engine to avoid injury to the cattle of the plaintiff." And as said in the case of the C. H. & D. R. R. Co. *vs.* Waterson, 4 Ohio, 484, "the facts and circumstances relied upon to show a want of proper care, were for the exclusive consideration of the jury."

In accordance with these views the judgment of the District Court and of the Court of Common Pleas must be reversed, and the case remanded to the Court of Common Pleas for a new trial.

Judgment reversed.

Pittsburg, Fort Wayne & Chicago Railway.

DEAR SIR—I have pleasure in handing you, herewith subjoined, a statement showing the financial condition of this Company at the close of the first half of the fiscal year, or June 30th ult.

The approximate earnings for July were $348,003 45, being an increase of 39½ per cent. and for the first seven months they were $2,799,842 66, being an increase of 44¾ per cent. over the same period of last year.

Respectfully, etc., etc.,

THO. D. MESSLER,
Comptroller.

GENERAL ACCOUNT APRIL 30, 1863.

Cost of railway, equipment and structures		$18,017,686 30
Cost of supplies on hand for current operations	$569,274 43	
Amount due from other companies	189,205 08

New York Canals.

The quantity of flour, wheat, corn and barley left at tide-water from the commencement of navigation to the 31st of August, inclusive, during the years 1862 and 1863, was as follows:

	Flour, bbls.	Wheat, bush.	Corn, bush.	Barley, bush.
1862	840,500	15,129,600	10,828,500	373,100
1863	725,000	10,067,100	14,665,100	73,100
Decr'e	115,500	4,562,500	*3,835,600	209,400

* Increase.

The following comparative table shows the quantity of some of the principal articles of produce left at tide-water from the commencement of navigation, to and including the 31st of August, in the years indicated:

	1861.	1862.	1863.
Canal opened—	May 1.	May 1.	May 1.
Flour, bbls.	669,200	840,500	725,000
Wheat, bush.	13,019,500	15,129,600	10,567,100
Corn	10,682,500	10,809,500	14,655,100
Barley	194,400	373,100	73,700
Oats	3,038,900	2,167,700	5,099,200
Rye	444,700	521,500	252,200
Beef, bbls.	600	11,300	9,870
Pork, bbls.	3,900	133,500	227,000
Bacon, lbs.	412,500	5,253,500	3,371,900
Butter	140,700	476,100	73,300
Lard	503,300	7,099,500	18,546,200
Cheese, lbs.	221,200	392,100	368,100
Wool	870,300	1,293,006	38,400

Atlantic and Great Western Railway.

The Atlantic and Great Western Railway is progressing rapidly under the able direction of Mr. T. W. Kennard, its engineer in chief. On the unfinished portion of the main line west of Akron upwards of five thousand laborers are constantly at work, and of the 30,000 tons of rails required for its completion more than 20,000 tons have already arrived, and are being forwarded into the interior. Between Salamanca and Akron, and along the tributary branches from the oil regions at Titusville and Franklin, the line is in fine working order, showing a large and steady increase in its monthly returns from coal traffic. Upwards of one hundred additional engines of the best description are in course of construction at the best engineering establishments in the country, with a corresponding number of cars, to be ready for the through traffic which is sure to follow its connection with the Ohio and Mississippi Railroad and with Cleveland in November next, when an enormous increase of receipts may be fairly counted upon. The central depot is at Meadville, in Pennsylvania, where the company's workshops and the houses of the employees are situated, covering an area of sixty acres, and comprising an elegantly constructed station, with a hotel adjoining, where every provision has been made for the entertainment and comfort of guests, however limited their stay.

Rich Mining Regions.

Los Angelos, California, papers continue to publish flattering accounts from newly discovered mining regions, situated 150 miles east of Fort Mahone, and 100 miles north of the Gila river, in the region of country watered by the San Francisco, Salt, Puesto and St. Guafrio rivers. The mines extend over a region 150 miles long by 30 wide. Large numbers of miners are flocking thitherward from the Southern counties of California. More than 500 were at work three weeks ago. The steamer Sierra Nevada arrived from the Northern coast, bringing $177,000.

Peninsular Railroad.

The Peninsula Railroad, about the importauce of which we posted our readers three or four months since, we are happy to learn is being pushed through between Green Bay and Lake Superior with all possible dispatch. Several miles are graded, and vessel loads of rails have already arrived from the East for the track. Nearly one-half of the road is expected to be in running order this fall, and the balance before the first of June next. All the necessary funds are provided for, and more offered than required in New York. This will bring Chicago within 22 hours of Lake Superior, and the bulk of its trade will soon be ours. So much for the results of a little energy, and a fair show of "material aid," by our business men for this railroad in its inception. The next thing is to have a staunch line of propellers to run in connection with the road, and give the Lake Superior customers of our merchants as low rates of freight and as quick dispatch as is now provided to Detroit and Cleveland. We understand that steps have been taken to organize such a line, and that some of our leading merchants are taking an active interest in making it a sure thing, so that Chicago will be fully equipped for the trade of that region next spring. This is a most important object, and should receive the hearty support of all our far-seeing, shrewd, enterprising merchants.—*Chicago Tribune.*

Winona and St. Peters Railroad.

The attention of the business and traveling public is called to the opening of the new line of railroad to the State of Minnesota on the 15th of this month, known as the Winona and St. Peters—already completed from Winona to St. Charles, a distance of 30 miles. The continuous line of this road is through the most productive and best improved portion of the State, making an outlet for the Southern half, or full three counties in width from east to west. The road will be fully completed to Rochester by May next, a distance of 50 miles, and the grading is nearly finished to Onatonna, 90 miles, at which latter place it will connect with and form a continuous line to St. Paul with the Central Minnesota, now building. Surveys are being made from Rochester via Hastings to St. Paul, and also via Rose Mound and Maukato, insuring at an early day, the completion of the great Northwest route. Negotiations are progressing for the building of a road from Winona to the La Crosse, distance 28 miles, which will perfect an Eastern connection, via Northwestern road to Chicago, La Crosse and Prairie du Chien, to Milwaukee.

West Chester and Philadelphia Railroad.

We learn that an arrangement has been made by which the Branch West Chester Railroad has been placed in the interest of the West Chester and Philadelphia Railroad Company *via* Media. It is said that a large majority of the stock of the old road is now held by a gentleman in the Board of Directors of the new road, and they have agreed to purchase the balance of the stock at a stipulated price. The purchase of all the shares will foot up less than $150,000. The old road has real estate in Philadelphia valued at $40,000 and a reserved fund of $15,000, besides the depot at West Chester, with valuable station-houses along the line of the road. All these will pass to the purchasers, who will also receive the proceeds of the lease now existing with the Pennsylvania Railroad Company, and which expires April 1st, 1864. The effect of this arrangement is to do away with competition, and eventually to throw all the through passengers on the road to Media. We learn it is also in contemplation to have the passenger depot at West Philadelphia, instead of Eighteenth and Market. This alone will save the company about $13,000 a year—about nine per cent. on the whole purchase of the old road.—*Philadelphia Press.*

A Sketch of the Progress of Canada.

An exceedingly interesting and valuable work has just been published by Mr. Stebbins, of Toronto, under the title of "Eighty years of progress in British North America." The chief writers on Canada are Professor Hind, Mr. Thos. Keefer, Mr. Robb, and Mr. Hodgins; on New Brunswick, Mr. Perley (Commissioner of Fisheries;) and on Nova Scotia, Prince Edward's Island, and Newfoundland, the Rev. Mr. Murray.

Professor Hind, in speaking in the first instance of the physical features of Canada, cannot of course report much progress during the last eighty years, though doubtless had it been within the scope of and the intention of the work to go back a few thousand years, his intimate acquaintance with geology would have enabled him to show us that nature has not been inactive. The mere mention of the fact that the fifty million cubic feet of water which pass the city of Montreal every minute carry down with them to sea each year 143,000,000 tons of solid matter strikes the mind with awe and suffices to show how insignificant are the works of man in comparison with those of the Almighty.

Previous to 1783, save a few insignificant French colonies scattered along her frontiers, Upper Canada had no human inhabitants except the Indians who roamed her forests and beat out over the sides of their canoes the wild rice which here and there grew in the swamps near the mouths of her streams. She has now a population of 1,396,091. Eighty years ago Lower Canada contained a population of 113,000 people; she has now upwards of 1,100,000. She was once far ahead of us—we are far ahead of her now. It would, we may here remark, have conduced somewhat to the completeness of the volume before us if the entire census returns last taken had been available, but the figures in the possession of the writers have enabled them to meet, to a large extent, the deficiency which they would otherwise have severely felt. To all who take an interest in the welfare and progress of Canada, the statistics given respecting the agriculture of the lower province must cause feelings of great disappointment. These facts, be it remembered, are not the emanations of party feeling; they do not owe their existence to Reformer or Conservative, but they stand by virtue alone of the truth that is in them, independent of all else. In 1827, when the population of Lower Canada was 471,826, she grew 2,931,240 bushels of wheat. Twenty-five years afterwards she had increased it only to 3,073,943 bushels. Between 1842 and 1861, a period of 19 years, Upper Canada increased her yield from 3,221,991 bushels to 24,620,425 bushels. In 1827 the number of tons of hay grown in Lower Canada was 1,228,067; in 1852 it was but 755,579. In only two articles of agriculture is there any advance commensurate with the population in Lower Canada, viz., in oats and flax. Oats increased from 2,341,529 bushels to 8,977,380 bushels, and flax from 731,696 pounds to 1,189,018 pounds. "The area of Lower Canada," says Professor Hind, "under crop in 1827 was 1,002,198 acres; in 1852, 2,072,341 acres, or more than double; yet, while the area under crop had doubled, the yield appears to have uniformly diminished. In Upper Canada the yield of wheat to the acre is 16 bushels; in Lower Canada, 9; of Indian corn in Upper Canada, 24; in Lower Canada, 18; and so on through the whole list of crops. There can be no doubt that one cause of the great difference between the two sections of the province is to be found in the absurd practice of subdividing the lands and in the adherence to the manners and customs of their forefathers, as exemplified in the farming operations of the Canadian *habitans*. The first of these evils is largely owing to the way in which their farms were laid out in the first instance. They were originally divided into lots 200 yards broad (or rather narrow) by 2,000 yards long. Now, being subdivided for the benefit of younger sons, there are not a few of them which are but 38½ yards in width to 2,000 yards in length. To the want of skill manifested by the Lower Canadian farmer we will not now refer. We would rather point to the evidence of the improvement already manifested in the rapid growth of agricultural societies and in the successful efforts they are making to diffuse useful information among the agriculturists of the lower province. The introduction of deep ploughing of worn-out lands, as they are falsely called, of an intelligent rotation of crops, and of improved implements of husbandry will, we trust, a few years hence enable the writer of the next history of the progress of Canada to make a better report of our French neighbors.

Upper Canada presents a different spectacle—a spectacle of which we may well be proud. The figures already quoted are proof of this and need not be again given. We may, however, adduce some others, further illustrative of our progress. We quote from a comparative table compiled by Professor Hind:—

	1851.	1861.
Population of U. C.....	952,004	1,396,091
Occupiers of land.....	90,906	131,953
Wheat—bushels	12,682,550	24,620,425
Barley "	625,452	2,821,962
Oats "	11,391,867	21,220,874
Potatoes "	4,952,186	15,325,920
Turnips "	3,110,318	18,206,959
Flax or hemp	59,680	1,225,394
Bulls, oxen, or steers	192,140	99,605
Milch cows.....	297,070	451,640
Horses.....	201,670	377,681

The diminution in bulls and oxen, instead of proving retrogression, has the contrary result, for their place has been supplied by horses, now more generally used for farm work. We could extract many other interesting facts from Professor Hind's paper upon this subject, but must pass on, remarking, however, that the succinct yet comprehensive view he has given of the subject with which he has dealt is such as was to be expected from his knowledge and his happy method of treating matters of this description. His sketch of the North-West territory is, perhaps, more interesting to the general reader, as it is necessarily less encumbered with statistics and admits of racy sketches of modes of life unknown in the civilized regions of North America. But what a story will the next eighty years have to tell of the progress of that now desert land!

Mr. Keefer's paper abounds with curious information. His history of the early provisions made for the construction of roads in Lower Canada, and, indeed, in Upper Canada also, contains many facts with which very few are familiar. The difficulty in the way of making progress with the French *habitan* is well illustrated in Mr. Keefer's notes on *cahots*. Jean Baptiste uses a sleigh, the shafts of which are attached to the body of the vehicle by means of chains, so that when the draught slackens the shafts fall upon the snow. Moreover, the horse is not put to one side of the sleigh, so that he may run on one side of a double track, but he is placed in the centre, an arrangement, as we can easily see, replete with inconvenience. By the action of the shafts of successive sleighs sticking in the ground whenever a slight declivity occurs, huge holes are formed, so that the driver, by reason of their depth, as he lies back among his buffalo robes, is sometimes unable to see where his pony has gone. In 1788, Lord Dorchester, "of his own mere motion," attempted to abolish *cahots* by an ordinance "to alter the method of drawing sleighs;" but the *habitans* thought that a great grievance had thereby been inflicted upon them. Their fathers had been allowed to have *cahots* from time immemorial, why should the privilege be denied to them? So they kicked up a great fuss, indulged in various riots, and at length abstained from bringing in any supplies to the town. Lord Dorchester, like many a brave man before him, had to yield to famine, and the ordinance was withdrawn. In 1840, Lord Sydenham travelled in the footsteps of his predecessor, but immediately after the union the right of self-government was asserted and the law was repealed. *Cahots* still remain among those institutions which, the Lower Canadians fear, we of Upper Canada will abolish when we get the chance. They are mistaken, however. If our French friends like to have big holes in their highways, we shall be the last to interfere.

But, while bringing to mind this phase in the history of Lower Canada, Mr. Keefer does not spare the dwellers in the upper province, who still persist in the construction of corduroy roads and who manifest a sad want of skill and conscientiousness in the construction of macadamised roads. He says, truly enough, that "the only properly constructed and managed macadamised roads in the province are the turnpike trusts outside of Montreal and Quebec." His remarks upon the toll system and its abuses—the toleration of which he considers as strong evidence of the law abiding disposition of the people as can be offered—are well deserving of consideration. He thinks that an assessment upon hoofs and wheels, levied by the cities and market towns, would be far better than the maintenance of the toll gates.

The grants for colonization roads to Upper Canada since the union amount to $528,739; to Lower Canada to $425,265. The roads built by municipal and joint stock companies in Upper Canada during the same period amount to $4,366,522; in Lower Canada to $20,000. "Summing up," says Mr. Keefer, "the provincial, municipal, and corporate expenditure of Canada under the three heads of roads, navigation, and railway, we find that in round numbers the first have cost $11,000,000; the second, $21,000,000; and the Canadian interest in the last is at least $30,000,000; or a total of over $60,000,000. This sum also is about the measure of the public debt of the province, so that, setting off what has been expended upon public works out of revenue against what has been borrowed for other purposes, we cannot lay claim to the possession of any that have yet been paid for." We have 1,906 miles of railway constructed and we have upwards of 234 miles of canals. Mr. Keefer gives the history of the principal railways which have been made and of the great works undertaken for the improvement of the navigation.

We can find room to say but little on Professor Hind's paper on the trade of Canada. The statistics it contains will be found most useful for reference. Perhaps those bearing upon the Reciprocity Treaty are most interesting. The imports from the United States into Canada in the year 1853—the year previous to the treaty—amounted to $11,782,144; in 1861 they amounted to $21,069,388. The exports from Canada to the United States in 1853 amounted to $8,936,380; in 1861 to $14,386,427.

Passing over, as we are compelled to do, the very elaborate papers of Mr. Robb and of Mr. Hodgins, both of which are very cleverly written and contain an abundance of information which it is most desirable to have collected, so as to be readily available, we come to Mr. Perley's paper on New Brunswick. The total population of the province in in 1824 was 74,176 and in 1861 210,000. In every department of trade and commerce she manifests a proportionate increase. In 1825 vessels measuring 25,000 tons were built in the province;; in 1862, 41,003. In 1854 the shipping belonging to her measured 141,454; in 1860, 147,083. She has built a railway between St. John and Shediac, 108 miles in length, at a cost of $4,548,564, which she justly boasts is better constructed and equipped than any Canadian line, and she is ready to go on with the Intercolonial road as soon as we are. Her imports in 1828 amounted to 643,581*l.*; in 1861 to 1,446,470*l.* Her exports in the former year amounted to 457,855*l.*; in the latter to 916,372*l.* The difference between the imports and the exports, we are told, is made up by the sale of ships in Europe, which are not, it appears, included in the returns.

In 1755, when the expulsion of the disloyal Acadians took place, the population of Nova Scotia, says the Rev. W. Murray, in his sketch of that province, was 5,000. It is now 330,857. The

rate of increase during the last decade was 19.82 per cent. Since 1851 she has received but few emigrants. In 1827 the value of wheat grown was $152,861; in 1861, $312,081. In 1827 the value of barley, rye, oats, buckwheat, Indian corn, peas, and beans was $449,626; in 1861, $2,539,623. In 1808 the number of horses in her possession was 6,763; in 1851, 41,927. In 1852 her imports amounted to $5,970,877, her exports to $4,853,903; in 1861 the first amounted to $7,613,227, the second to $5,774,334. The value of ships exported is not included in the above figures.

As a work of reference in matters appertaining to British North America, this book is invaluable.

The Agricultural Bureau.

A new feature will be introduced in the forthcoming Report of the Department of Agriculture, consisting of the engravings of animals, plants, etc., drawn from nature, by a competent artist. It will be the most interesting work of the kind yet issued, and besides the usual articles on agriculture, will contain the reports of the Chemist and the Professor of Entomology connected with the Department. The work is being stereotyped and will probably be published about the first of November. Mr. Isaac Newton, the Commissioner, is doing all he can to bring it out as speedily as possible. Mr. Sanders has charge of the experimental garden of this Department.

Wyoming Canal Company.

As there has recently been a very material advance in the securities of the Wyoming Canal Company, we have, for the information of our readers, procured from a reliable source some facts in connection with the work and its working condition under its re-organization, which it has completed under the provisions of an act of the Legislature, by which it is incorporated as the "Wyoming Valley Canal Company," with a capital stock of $500,000 divided into 10,000 shares of $50 each. The entire amount of bonded debt is $750,000, represented by 750 bonds of $1,000 each, bearing 6 per cent. interest, payable half yearly in January and July, secured by a first mortgage on the property and franchises of the company, and due in 1878.

This canal extends from Wilkesbarre, in the head of the great coal region, to Northumberland, 64 miles, supplying the vast iron furnaces on its route with coal, iron ore and lime, and its trade is connected with the various canals passing into the interior of Pennsylvania in all directions, and to the harbors on the Chesapeake bay and the Baltimore market, having also an extensive up trade through the rich valley in which it lies.

The tolls the present year are, owing to a larger supply of boats, greatly increased. The total receipts from April 1st to August 31st were $97,000; the working expenses, $15,500; interest on mortgage, $22,500—making a total of $38,000, which, deducted from receipts, leave $59,000. If we deduct from this $30,000 for the 6 per cent. dividend just declared on the stock, there is left $29,000 towards the sinking and contingent fund, being equal to 5 4-5 per cent. surplus on four months' earnings.

The three remaining months, September, October and November, are ever considered the best of the season, and will probably, in the aggregate give a return of profits nearly or quite equal to the four months just passed. These facts fully warrant the advance movement in its stock, and must place its bonds among the most reliable securities on the stock list. The amount is so limited that the interest seems to be amply provided for. The canal is represented as in excellent condition, with full and increasing trade. The following is a list of its officers under the re-organization, viz: James H. Duiles, President; William G. Morehead, Benjamin Orne, John H. Brown, Robert Smith, Robert F. Taylor, E. G. Darling, Directors.—*Philad. Ledger.*

Pennsylvania Coal Trade.

The tonnage for the year, up to the date of the latest reports, is 6,073,655 tons, against 4,807,893 tons to the same time last year, being a net increase of 1,265,762 tons. The operations at the mines are prosecuted with much vigor, the only check to further supply in the market being a want of cars. The coal operators complain that the carrying companies do not give them enough cars, and the railroad companies are quite unable to have them made as fast as wanted, though their orders are out with makers all over the country. The miners and laborers are receiving a very considerable advance in pay over last season, but no difficulty, as we are informed, at the present time exists at any of the mines. It is the opinion of some intelligent operators that coal is now at about its highest point.

Storage of Petroleum at Hamburg.

One of the immediate practical results of the important experiments on petroleum made last month at Hamburg by the authorities of that city, is the publication of a decree of the Senate considerably relaxing the stringent measures hitherto in force with regard to warehousing petroleum in private stores. The decree ordains that crude petroleum, petroleum naptha, and petroleum that evaporates into gas at a lower temperature than 30 degrees Reaumur (99½ degs. F.) must be, as heretofore, warehoused exclusively in the public stores on the island in the Elbe. Refined petroleum, however, from which no inflammable gases emananate at a temperature under 30 degrees Reaumur, may, as is the case with oil of turpentine, be warehoused in the private stores of retailers to the extent of 1,600 lbs., and may be shipped without the presence of a police-guard. The quantity of refined petroleum allowed to be kept in a shop or other place of sale by retail is extended to 300 lbs. The private warehouses for storing refined petroleum must first be examined by the police and found unexceptionable; they must have no vent towards the canals, streets or courts, by which the liquid can escape, and the doors must be furnished with a sill at least six inches high. Importers and owners of refined petroleum are bound to submit samples of their goods to one of the local sworn chemists, who will analyze them, and furnish a certificate of the examination. All petroleum not accompanied by such a certificate will be considered inflammable and dangerous, and cannot be admitted into private warehouses, but must be sent to the public stores.—*London Grocer and Oil Trade Review.*

St. Louis, Jacksonville and Chicago R. R.

We alluded the other day to a new proposed railroad between here and St. Louis. We now understand that this road is composed of the old Jacksonville and St. Louis Railroad, and the Petonica and Petersburg Railroad Company, which were consolidated into the St. Louis, Jacksonville and Chicago Railroad Company, and the consolidation confirmed by an act of the last Legislature, which also gave them power to extend its main line to Chicago, and to build any branch or branches that might be necessary to connect it with any other railroad.

Twenty miles of the road north of Jacksonville is built and running, and a large portion of the residue has been graded, so that it can be finished at a cost of $14,000 per mile. The route runs through an old settled and fertile section of the country, and is the shortest between Chicago and St. Louis. Arrangements have been completed to build the road through.—*Chicago Tribune.*

☞ The Assistant Engineer of the La Crosse Viroqua and Mineral Point Railroad, reached Viroqua on the 28th ult., with a force of surveyors. He is now running the line from Viroqua to La Crosse. He will reach here next week.—*La Crosse Republican.*

Valuation of New Bedford.

The valuation of New Bedford the present year is, real estate, $8,610,200; personal, $14,496,900. Total, $23,107,100—an increase of $1,518,500 over last year. The rate of taxation is $10 50 on $1,000, against $10 70 last year. The area of land taxed is $7,910 acres and 138 rods, and there are 8,272 houses in the city.

Central Ohio Railroad.

At a meeting of the stockholders of the Central Ohio Railroad, recently held at Zanesville, the following gentlemen were elected directors for the ensuing year:

President—Hon. H. J. Jewett, Zanesville.

Directors—C. B. Goddard, W. B. Brooks, S. R. Hosmer, D. Applegate, Zanesville; J. D. Wright, Isaac Hall, Belmont; J. Dunlevy, Wheeling; D. McCartney, Cambridge; Hon. Wm. Dennison, J. W. Baldwin, D. W. Deshler, Columbus; G. B. Wright, Newark.

The death of Elias Fassett, Esq., caused a vacancy, which was filled. George James, Esq., of Zanesville, and H. Drakely, Esq., were not re-elected.

Railroad Earnings—Weekly.

The traffic of the Great Western Railroad for the week ending August 28, 1863, was as follows:

Passengers	$24,107 99
Freight and live stock	17,238 14
Mails and sundries	1,218 02
Total	$42,564 15
Corresponding week of 1862	43,220 98
Decrease	$656 83

The earnings of the Grand Trunk Railway for the week ending August 15, 1863, were:

Passengers	$36,000 66
Freight and live stock	36,721 33
Mails and sundries	2,800 00
Total	$85,521 99
Corresponding week, 1862	60,007 70
Increase	$15,514 29

The earnings of the Chicago and Alton Railroad for the 4th week of August, 1863, were:

Passengers	$16,396 36
Freight	31,339 73
Sundries	1,135 34
Total	$48,872 03
Same week last year	27,609 03
Increase	$21,263 00

The earnings of the Chicago and Rock Island Railroad for the 4th week of August, 1863, were $51,112 00
Do., 1862 32,359 00
Increase $18,753 00

The earnings of the Chicago and Northwestern Railway for the 4th week in August, 1863, were $40,576 39
Do., 1862 23,440 86
Increase $17,135 53

The earnings of the Galena and Chicago Union Railroad for the 4th week of August, 1863, were:

Freight	$42,387 32
Passengers	12,420 58
Mails	1,300 00
Total	$56,107 90
Same week, 1862	51,011 61
Increase	$5,096 29

American Railroad Journal.

Saturday, September 12, 1863.

Stock Exchange and Money Market.

The opinions which we persistently maintained last week in the face of the panic which had fairly set in as we went to press, have been justified by the result. The Money Market is resuming its previous character just as we were confident it would. Whenever a panic suddenly overtakes the public, we may be sure it will as suddenly depart. Permanent changes are not instantaneous; they are gradual, regular, and proceed step by step. The cause of the flurry last week was explainable at the time, and was well understood by a large number of bankers and operators who have access to the best sources of information, and no doubt profit by their opportunities. The banks for reasons best known to themselves, suddenly refused the usual accommodation to their customers, at least to a favored class of these persons, of certifying their checks in ad-

vance of their deposits; a practice inconsistent with sound principles and a constant cause of loss to those permitting it. It enables the favored parties to have the use of large sums of money for a whole day without interest, and excites a spirit of speculation that leads to great risks and dangerous consequences. Loans were also as unexpectedly called in, and the excuse was, that a large treasury loan was about to come into the street, and the banks, having no commercial paper offering in quantities large enough to employ their ordinary means, would be obliged to take the loan in justice to their stockholders. A private reason is also suggested as one of the causes of the panic, that the sudden scarcity of money was very opportune for a realization of some of the speculations which had their origin in the parlors of the very institutions which had most to do with the unexpected contraction of the usual facilities.

The plan whoseever it was, and however carried out was a success for the time. Such a tumble of stocks, such a rapid fall of securities, and such a crumpling up of margins has not been seen before in Wall street in many a day. The numerous small operators, including every variety of professions known to New York, were brought down from their perches like a flock of wounded birds, by the shot of the concealed sportsman. Even the larger of the species who make their eyries in higher branches, and apparently in more safety, were seen to fly wounded from their nests, and it is reported that a large number of those who were millionaires a few weeks since, are now reduced to thousands. Nothing daunted however, we perceive that out of what remains, they are at their work again, and will probably rise to a higher flight than ever. The bears after having suffered intensely in their efforts at depreciation, after giving wings to every rumor true or false which would reduce values and prices; after apparently working on a scale which is graduated so as to represent a certain fall per cent. for every national disaster, and a certain rise per cent. for every piece of good news from Richmond, have found the fight with the bulls a drawn game, and are in the condition of a celebrated personage overthrown notwithstanding all his successes.

"The desolator desolate,
The victor overthrown,
The arbiter of others' fate,
A suppliant for his own."

During all this uproar among the ordinary securities, it was pleasant to see how steadily the credit of the Government maintained itself. Its stocks were scarcely touched and when it came at the very moment into the market with a loan of fifty millions at the low rate of 5 per cent. interest, it was snatched up at once and on its own terms. The efforts of Dame Partington to stop the rush of the tide with her broom, are apt illustrations of those who seek to impair the onward march of the power and resources of this country, of which until now the best of us were ignorant. Since this war commenced we have begun to discover that the people of the loyal states are twenty-four millions strong, that their internal trade was never so great, their foreign commerce within a few per cent as large in amount as ever, that our paper currency has not been so large as to produce any inflation of the prices of our own products, that the national debt is at this moment acting as capital, and exciting the skill and industry of the country, and that the clear profits of the industry of the loyal states to day, are being realised at the rate of four thousand millions of dollars per annum. More than this we have it now established beyond all dispute, that the gold *washings* of the superficies of the sides of the gulches, and the bottoms of the ravines of Colorado alone, are found to be equal in value, at 1 cent of gold in 1 lb. of ore, to thirty five billions of dollars. But if the actual products per ton of ore as realised in the average from the mines already worked, are any guide to a proper estimate, we may see that when tons of ore now actually produce in all cases from $400 to $1,500 per ton, we want figures to express the amount of solid capital which lies in the basins, vallies and sierras of Colorado alone. We therefore re-affirm our opinion that those who seek to make money or expect to make it by speculating on a basis of national disaster, and the destruction of our resources, commercial, industrial or physical, are as likely to succeed as the man who trusts, to use the words of the President, to the effect of a bull against the comet.

Money must therefore continue to work easier for a long time to come; 5 or 6 per cent will be the rate and even less for these general reasons, and also for others still more practical and immediate.

For example, the new loan of 50 millions will contribute to this result, because the treasury issues therefor, will be legal tender notes with 5 per cent interest only; and are to run two years, principal and interest payable in gold. The effect of this will be to make them an easy and desirable transfer from hand to hand for most purposes of business, while also those who collect in money to meet engagements falling due ahead, will eagerly seek them, so as to save interest while gathering up the required funds. We must also expect that these new notes will be a favorite investment with foreign capitalists, even the most timid, for they are a legal tender very easily convertible at any moment, and are redeemable within a short period.

The stock market is again active and prices are improving, whether they will in all cases resume their old quotations is doubtful. Indeed it is not desirable that many of them should. The true criterion for a bona fide purchaser is the rate of dividend and its certainty. Purchases made on any other principle are mere gambling operations and must inevitably share their fate.

The state credits stand about as they did. There are people willing to buy Virginia's just as they were before the rebellion broke out, and we should not be surprised to find a large amount of spurious stock has found its way to the North, in consequence of sales being effected so readily in this market. There is some excuse for the delay attending the financial arrangements of the State of Missouri. It has suffered greatly, but its resources are large, its position is commanding, and its advancement is sure to be greatly accelerated on the return of peace.

Gold has advanced and fallen back a little. We imagine it is not likely to go down very much more as the great number of National Banks now organising, must require a large amount of specie in their vaults, as a necessity for their stability on the resumption of specie payments. We have no doubt there is a constant demand for the article on this very account.

The foreign export from this port the past week exclusive of specie was $2,637,963.

The business of the Sub-treasury on the 8th inst. was large, and the balance on hand $26,982,-070 04. It may be well to remark to our readers, that if we attempted to give the daily history of the money market and stock exchange of this city, we should occupy one-half of the JOURNAL. The daily fluctuations are however, really of no consequence, except to those who rise or fall with them. What a weekly journal of the character of ours may properly and usefully do, is to present a general view of the market, and of the causes which control it, and the general principles regulating the immediate and ultimate demands for money. These we attempt carefully to give them and for the rest our tables are full, accurate, and reliable beyond any other, which appear in any similar newspaper in this country.

The following quotations of sales of Railway and other securities are in addition to those given elsewhere in our columns:—

New York.—Cincinnati, Hamilton and Dayton R. R., 125; State 6s, 1873, 114; Brooklyn City Water Loan, 104; Illinois coupon bonds, 1879, 102; Miss. and Mo., 29; do., L. G. bonds, 60; Quicksilver, 67.

La Crosse and Milwaukee Railroad.

In answer to a correspondent in relation to this road, we have learned from an official source the following facts: "The La Crosse and Milwaukee Railroad stock was wiped out by a foreclosure sale made in March, 1857, by Wm. H. Barnes, Trustee for the 3d mortgage creditors, subject however, to a prior mortgage. The purchasers under the sale formed themselves into a company called the Milwaukee and Minnesota Railroad Company. It failed, however, to keep down the interest on the prior mortgage, and in their turn were foreclosed by the first mortgagers, and sold out in April 1863. The purchasers at this sale organized a company under the name of the Milwaukee and St. Paul Railroad Company."

Extraction of Iron and Steel from the Cinders of Puddling and Reheating Furnaces.

We have received a circular from A. L. Fleury of Philadelphia, in relation to a patented method invented by him for extracting iron and steel from the cinders of puddling and reheating furnaces. We have not space for republishing his method which appears to be worthy the notice of parties engaged in the business.

☞ The Detroit *Tribune* says that the Holly route has been adopted between Flint and the Detroit and Milwaukee road, because, although a mile or two longer than the Fentonville route, it brings the passengers upon arriving at Holly, five miles nearer Detroit.

The New Telegraph Line.

The Lyons *Republican* says: "The new Telegraph Line from Albany to Buffalo follows the Erie Canal as nearly as possible. The old line is almost entirely monopolized by the New York Central Railroad Company, and the new one is intended more particularly for the use of business men and private citizens. It is not regarded by the old line as a competitor, we are told. The old line has more business already than it can properly attend to, and does not care to increase its facilities for the accommodation of the rapidly increasing telegraph patronage.

Connecticut and Passumpsic Rivers R. R.

The Burlington (Vt.) *Times* states that the cars on the Connecticut and Passumpsic Rivers Railroad began running to Barton Landing on Sept. 1, connecting there with stages for Newport and Stanstead. The road will be open to Newport by the 1st of October.

American West India Company.

The American West India Company have opened a new line of communication with the West India Islands, which will be of great importance to the commercial community. Hitherto the mails for all the Windward Islands, for Cayenne, Surinam, Demerara, the ports in Venezuela and Brazil, have been sent *via* Southampton (England) by the English West India Mail Steamship Company. St. Thomas is the well known central station for that company, and the line now established between here and St. Domingo City will call at St. Thomas, as well as Bermuda, St. Johns, Mayaguez and Porto Rico, thus saving a distance of seven thousand miles in the transporting of the American mails to the aforesaid points. The steamship Tubal Cain, of this line, will leave New York Saturday of this week.

Union Pacific Railroad.

The work of the Union Pacific Railroad, of which Fremont is President, is being pushed with singular activity to the hundredth meridian. The eastern division of this road, commencing at Kansas City, is three hundred and fifty miles in length, where it strikes the great Pacific road. This will connect Kansas by railroad communication with St. Louis, Chicago and all the East.

Rome and Oswego Railroad.

The Watertown *Reformer* says: "The arrangements between the Rome, Watertown and Ogdensburg, and the Rome and Oswego Railroad Companies, have been definitely completed for the construction of a railroad from Oswego, to connect with the line of the former Company. The Rome, Watertown and Ogdensburg Company are to have a perpetual lease of the road and operate it. The line will be put under contract immediately, and the work commenced this fall and finished next summer."

☞ The Commissioner of Internal Revenue has decided that the seventy-fifth section of the act of July 1, 1862, provides that on railroad iron and on all other iron advanced beyond slabs, blooms or loops, and not advanced beyond bars or rods, a duty of one dollar and fifty cents per ton shall be paid. Iron forgings, of whatever size or shape, in a rough and unfinished state are held to be covered by the above provisions of the seventy-fifth section, and taxable at the rate of one dollar and fifty cents per ton.

Morris and Essex Railroad.

On the 13th prox., the eastern terminus of the Morris & Essex Railroad will be removed to Hoboken. In view of this fact, the Hoboken Land Improvement Company have commenced important improvements. The construction of a building for turning engines has already begun, and arrangements are now making for the erection of a large passenger depot and a commodious freight house.

Coal Beds of Michigan.

Prof. Winchell, State Geologist of Michigan, reports that the whole central area of that State, embracing one hundred and eighty-seven townships, or six thousand seven hundred square miles, is underlaid by coal seams ranging in thickness from three to five feet. Mines have been opened in several places, three at Jackson and one at Corunna, which last year yielded over twenty-five thousand tons. The coal resembles that of the Illinois beds in quality.

Emigrant Travel.

During the past seven months, 8,955 emigrants have passed over the Pennsylvania Railroad. For the same period in 1862, the number amounted to 5,400. During the present year 6,728 of the emigrants went to points west of Pittsburg, and generally to the far western States and territories. In 1862 only 3,788 of the travellers went west of Pittsburg. The increase in 1863 is supposed to be attributable to the Homestead law passed at the last session of Congress.

Munificence to Railroad Employees.

The Atlantic and Great Western Railway has established its machine shops at Meadville, Penn. It has also erected a large number of comfortable residences for its employees, which are to be rented to them at low prices. Every occupant who pays his rent for ten years and remains in the Company's service that length of time, is then to receive a deed of his house as a reward.

Bedford Railroad.

Cars run over this road to Bloody Run, 6½ miles from Bedford. At Hopewell the Bedford Railroad connects with the Broad Top Railroad, which at Huntingdon connects with the Pennsylvania Railroad. From Philadelphia to Bloody Run the rail distance is 248 miles. The Bedford Railroad will be extended to and through Bedford, to form important connections.

Railroad in Russia.

The *Abeille du Nord* states that a company of English capitalists have solicited from the Russian Government the concession of a railroad from Moscow to Sevastopol. They demand the full and entire enjoyment of the revenues of the line for one hundred years, leaving to the Government the option of redemption after fifty years. The Government is, moreover, to guarantee to the company a revenue of six per cent. during the period of concession and construction of the line.

☞ The Agricultural College Scrip, for the State of Kentucky, has just been finished. Kentucky is allowed 1,000 pieces of 160 acres each. That for the State of Illinois is still in the hands of the clerks of the Land Office, who are kept very busy with this work. The land for Illinois will have to be located in some other State, as the Government does not own more than about 2,000 acres of land in Illinois.

☞ The people of Three Rivers, fearful of losing the branch railroad which connects them with the Michigan Southern at White Pigeon—which is threatened unless they relay the track with T rail—now talk of promoting the construction of an air line road from Ypsilanti to Niles, to pass through Three Rivers. Such a route, says the Detroit *Tribune*, would save 28 miles travel over the Michigan Central between Detroit and Chicago, and Three Rivers would be a most convenient eating station.

Cincinnati, Wilmington and Zanesville Railroad.

The Cincinnati, Wilmington and Zanesville Railroad was sold at Cincinnati on the 27th of August. Mr. Charles Moran of New York, agent of the first mortgage bondholders, was the purchaser, at the sum of $600,000, being the sum fixed by the U. S. Court in the decree of its sale. The Zanesville *Courier* says:

We understand that this sale is the preliminary step to the reorganization and capitalization of this railroad, by which the bond and stockholders and other claimants may become stockholders upon the terms in the schedule, now in the Banking House of the Franklin Banking Company in this city.

The Bridge at Albany.

The contracts for the construction of the long litigated bridge at Albany, have all been awarded, and unless another injunction is procured, the work will no doubt be proceeded with. In noticing the project, the Albany *Journal* says:

The long talked of bridge across the Hudson river, opposite this city, is now in a fair way of being built. It is to be constructed entirely of stone and iron. John Bridgeford, who has the stone work, has received instructions to get the stone ready during the coming winter, so that the work can be commenced early next spring. The bridge will start with a curve from the present terminus of the Central Railroad on Maiden Lane, passing through the centre of the block of buildings bounded by Exchange, Dean and Quay streets and Maiden Lane, running north of the State street bridge and terminating in East Albany between the Boston and New York railroad depots.

Compromise Freight Cars.

The Toledo *Blade* says that several new freight cars have been recently constructed by the Toledo Car Company, for the Michigan Southern Railroad:

"They are what is termed the 'compromise car,' and intended for the 'Star Line,' between Buffalo and Chicago. These cars were built under the superintendence of Mr. W. Wilmington, and possess several improvements, which, in the estimate of railroad men, render them superior to those of any other manufacture; the material and workmrnship are all of the best description, and they are in the highest degree creditable to the establishment. The Toledo Car Company have a contract for furnishing 47 cars of this description for the M. S. road—ten of which were delivered yesterday.

The 'Star Freight Line' is composed of the five companies owning the South Shore road between the two cities named—Buffalo and State Line, North East, Cleveland and Erie, Cleveland and Toledo, and Michigan Southern—each road to furnish a per centage of freight cars—adapted to running on the different gauges between those points—acccording to its length. The M. S. Co.'s proportion is 45 per cent.—100 cars—47 of which will be from the Toledo Car Works, 20 from the Detroit Works, and the balance, we understand, the railroad campany are building at their shops at Adrian."

Schenectady and Catskill Railroad.

A writer in the Albany *Argus* thus sets forth the advantages to be gained by the construction of this road:

In the event of its construction it must necessarily facilitate the transportation of the vast amount of products that accumulates, from the different railroads and channels, from the great West and North, converging at this point. It will, evidently, be of great relief to the New York Central, as an outlet for the large amount of freight which is delayed by the obstruction in the Hudson river.

The stockholders of the New York Central, and the western shippers living along the line of this great thoroughfare, have a deep interest in the construction of this road. A large amount of freight and passengers, which now seek other channels to the Atlantic, would come this way, as the valley of the Mohawk is the natural outlet for the great West.

The numerous lines of roads yet in embryo, stretching far away to the Rocky Mountains, California and the Pacific, is destined to tax the channels leading to the Hudson to the utmost capacity. The New York Central would become the carriers of the world. The building of this small piece of railroad from Schenectady to Catskill would obviate all difficulty; it would connect the Central with the tide water at Catskill—water sufficiently deep to float vessels of the heaviest tonnage. It would certainly render the bridge at Albany unnecessary, and further appropriations of the State for the useless dredging of the overslaugh.

Marquette and Ontonagon Railroad.

Mr. T. T. Hurley, who has taken the contract of grading the first ten miles of the Marquette and Ontonagon Railroad, broke ground on the job last Tuesday, and intends pushing the work through with all possible dispatch. It unites with the Bay de Noquet and Marquette road about a mile and a half from the Lake Superior mine. Mr. Hurley has a good force of men at work grading, and is erecting buildings for their accommodation.

The contract for furnishing the ties has been taken by Jos. Bridges, Esq. These will probably be ready for the road, and the road ready for them, early next season. The way is cut out as far as the St. Clair mountain, where it rests for the present, to give time to complete the survey. A few weeks will be required to select the most practicable route, and one which will secure the largest amount of business.—*Lake Superior News, Aug.* 28.

Gold Mines in Canada.

There is a great rush to the gold mines in the county of Beauce, about thirty-five miles from Quebec. There are about a thousand persons at the "diggings," which are said to be exceedingly rich. The gold district extends over a distance of fifty miles, part of it running through the suburbs of Quebec. Some fine nuggets, weighing nearly an ounce of pure gold, have been found, and it is stated that lumps much larger in size have been washed out.

☞ We regret to learn that owing to the scarcity of labor, the Philadelphia and Erie R. R. is not likely to be completed at as early a period as has generally been expected. We do not believe that the opening of the road will take place much before the 1st of May.—*Erie Observer.*

☞ We are informed that the New York and Erie Railroad Company have purchased fifty acres of land about a mile east of the village of Salamanca, on which they intend to erect a new depot, their machine shop, &c. This will be likely to prove a damaging blow to Salamanca as a new and rival town will soon spring up on the site selected by the railroad company.—*Dunkirk Journal.*

Black River Mining Company.

The President, Treasurer and Engineer of this company, have recently returned from Canada with an excellent report of the property, now increased to two hundred acres, deeds of which are in the hands of the Treasurer, and arrangements have been made with Canadian parties to commence extensive mining operations, Four veins have been discovered in addition to the one so favorably reported upon by Dr. Charles T. Jackson of Boston, and Sir William Logan of Montreal. The mineral land is situated seven miles from the St. Lawrence, by which ore can be transported to Boston and New York, and is also but twenty-six miles from Quebec, by the Grand Trunk Railway, which is only three miles in a direct line from the mine. This very favorable location adds much to the value of the property. —*Boston Com. Bulletin.*

[From the U. S. R. R. and Mining Register.]

The Gold and Silver Mines of the Great Colorado Basin.

EXTRACTS FROM THE JOURNAL OF DR. WILLING'S EXPLORATIONS.

Continued from page 850.

(*b*) *The Sierra De La Plata, or Silver Mountains, and the* (*c*) *Sierra San Juan Range of the Rocky Mountains.*

It is evident that within the Elk Horn Mountains last described no ancient wrought mines are in existence, and indeed their appearance do not indicate that they were ever inhabited by any race of people. The absence of trails throughout the entire length of the range goes far to show that the Aborigines knew but little of the metallics contained within them, and that their investigations did not reach that far north. * * *

Upon the Estrandosa, and on one of its tributaries that takes its rise in the *Sierra de la Plata*,* remains of ancient settlements are to be seen, but it is difficult to fix their date. The *Sierra de la Plata* and San Juan Mountains are separated from the Elk Horn range by the valleys of the Eagle tail and Un Compadre rivers, the La Plata being spurs of the great San Juan range, and so nearly allied to the latter that it is difficult to distinguish which has the greatest altitude; therefore, in describing them, will be called the northern slopes of the San Juan.

The Sierra San Juan range, including the La Plata, is nearly 400 miles long, having its courses southwest from the Sierra Madre or Mother Mountain. The northern flanks descend with great rapidity and precipitancy, forming immense terraces, escarpments and numerous *gorges* and canones. This chain of mountains divides the waters of the San Juan and the Colorado rivers, and at their junction forms the perpendicular wall of the great canone that receives all the waters which flow into Green river. This canon is about seventy-five miles long.

The principal streams flowing from this watershed and emptying into the confluents of Grand river are the Un Compadre, Unka Weep, Silver Creek, and the Rio Nueva de Sallados de los Dolores, all of which are mountain torrents, having an average fall of 180 feet to the mile; besides these streams, are numerous lakes enclosed within parks and basins having no outlet. The summits of the main range have numerous conical volcanic peaks, at all times clad with snow, and still below them other peaks resembling extinct craters occur in many places along the range. The altitude of the highest point upon the San Juan is, by aneroid calculation 15,066 feet above the level of the sea.† The La Plata peak southwest and near the centre of the range has an elevation but little if any inferior.

The flanking hills descending to the valley forms, in the prospective, a *stair-way*, each range rising above the other until they culminate in the Mother Mountain.

* Rio de la Plata Plancha.

†Mount Jonies.

The peculiar formation of parts of these mountains is quite interesting. Upon their western limits, and near the source of the Rio Sallados Dolores large pyramids of rock-salt occur, which give to the waters of the stream a very strong saline taste. This river, as laid down on the maps, is made to empty into Grand river, but such is not the case; before reaching Grand river it spreads out into a considerable lake resting upon a sandy bottom, not far from the old Spanish port known as *Asunsion* upon the old Spanish trail between Laos and San Diego. During the dry season of the year the effervescence of this salt upon the margins of the stream and the lake is in great abundance. The salt is very pure, and with but little pungency. Near these pyramids of salt are large deposits of gypsum, limestone and coal. The largest deposits of coal are confined to the lowest hills bordering upon the Un Compadre and the Estrandosa. These are lignities, and contain an unusual quantity of fixed carbon. They vary in thickness from three to fourteen feet. All the crops show they are the result of upheavals.

The sulphurous and other limestones have a very wide range and over-lap the primitive rocks for a considerable distance within the range of hills, and, in some instances, are found in close proximity to the intrusive rocks. When occupying the latter position, as upon the Unka Weep and Silver Creek, they contain a large per centage of silver. Although silver is never absent wherever gold is found, and it is all instances found in alloy with that metal, the latter is never found in places beyond the limits of the igneous, trappean, talcose and other kindred rocks.

The entire region is volcanic. Mountains of upheaved lava, broken and in huge masses, skirt the metamorphic and other intrusive rocks, and along the lower flanking hills scoriæ and pumice in fragments are scattered far from the craters upon the tops of hills bordering upon the largest valleys. In some instances columar peaks of basalt, containing angite, feldspar and basantite* enclose the metalliferous regions, and sometimes cover or rests upon it. Generally speaking these basaltic upheavals mark the commencement of the deposits of gold and silver; as the Mother Mountain is approached, in the same manner the granite in place, nearest the summit, confine the intrusive rocks in that direction.

When we take into consideration the immense space which the gold and silver bearing rocks occupy in this range of mountains, occupying a length of four hundred miles by forty in width, and confined to the northern slopes of the Sierra San Juan, including the La Plata range of mountains, calculations, however great and comprehensible to the human mind, will fall far below what would seem to be the actual value contained within its limits.

The metalliferous range of this region may be safely set down as containing over four millions of acres—an area equal to the entire mining region of California. The exploration of the range as described is incomplete. But that part which has been subjected to scientific research occupies an area of seventy miles by about forty within this limit, between the affluents of the *Rio de Nueva Sallados de los Dolores*, and Silver Creek or the *Rio de la Plata Plancha*. The deposits of metals in veins that permeate the rock are so numerous and of every variety, that the whole flank is crossed and recrossed by them. The ravines being very narrow and deep, the ores are found in fragmentary pieces without the pains of hunting for them—so abundant are these deposits that once within the region the observer cannot go amiss.

Where the carboniferous strata comes nearest to the intrusive rocks the ledges of silver ores are of the most frequent occurrence. These, when imbedded in the talcose or igneous formations, are highly auriferous. Nearest to the centre of this formation, the vein stones assumes a different character from any other locality noticed, and present the most complete specimens of conglomerates, being composed of gold, silver, lead, copper, antimony, alluvium and manganese, with alloys of native metals.

The following are the assays of ores from Silver Creek or the *Rio de la Plata Planchas*.

No. 1—400 grs. of Argentiferous conglomerate —*dry ravine*.

Gold 1½ grs.; silver 7½; copper 23 grs.; lead and refuse not tested. Other specimens were assayed, giving fair results, the account of which has been lost. They, however, were very rich in the metals.

The most complete and reliable prospecting for gold is obtained through the medium of the *pan* This simple process detects the presence of gold wherever it exists, when properly managed.

A part of the prospects made in the ravines and gulches which have been noted, are as follows:

Silver Creek—Ravines affluent thereto.

Pan No. 1.—Sod.....30 to 40 specs of gold
" No. 2.—Hole 1 foot deep. 1 gr. " "
" No. 3.— " 3 feet deep. 2½ grs. " "
" No. 4.— " 5 feet deep. 9 " "
" No. 5.— " " " " .82 " "
" No. 6.— " " " " .$1 73
" No. 7, 8, 9, 10, 11, average depth 4½ feet; average yield 3 grs. of gold.

Canon De Colorado.
Rio de piezas La Plata,
1 pan, each from 11 Ravines. } 68 cts.
Average yield of gold per pan. }

The majority of the gold was coarse scale, excepting that which was taken from nearest the surface, which was dust as fine as superfine flour.

The occurrence of the metallics in the Sierra de la Plata or northern slopes of the San Juan range illustrates the practical opinion of the continued range of the same belt, found in the Pike's Peak or Greggory mines; thus it will be perceived that their developments are but a small part of the auriferous region of the Territory of Colorado, the northern slopes of the San Juan range, including the Sierra de la Plata, being within its limits. Until practical mining engineers survey this region, but little will be known concerning the original position of these mining districts.

With the present knowledge of the country in question, and the very meagre investigation made, it is impossible to give an accurate account of the value of this part of the country under investigation. It is obvious, however, that sufficient has been ascertained to form a tolerable correct idea of its value as a mineral region. These superficial researches attest, with some degree of certainty, the existence of immense deposits of gold and silver, as well as other metals inferior to them, besides possessing within its area many of the precious stones—the turquoise and opal being the most abundant.

Nearly all of the carboniferous rocks nearest to the intrusive rocks contain silver to a greater or less degree; and where these rocks are detached and over-lap the igneous upheavels these ores are of a workable nature. Outcrops of this character are of frequent occurrence, and far exceed the Elk districts heretofore described; the body of these ores is in great bulk and assumes every conceivable position—sometimes appearing at the base of the mountain on the margin of the deepest ravines; near the centre of the hill, where it forms a perpendicular bluff, and more frequently on the benches or summit of the hills, either running parrallel or across the ravines, both of which are common.

These immense deposits of the metals gold and silver, occupying a position far removed from any traveled route, and contained within the ranges of steep hills covered with a dense growth of timber, the ravines representing jungles difficult of access without being cleared away with much labor, have hitherto been unexplored, and still a large part of the country alluded to as well as other portions spoken of in this treatise, is unknown, and the probability is, from what is already known, that the metallic wealth of the San Juan will be found to far exceed the district of the Elk Horn.

The prospects made with the pan illustrate the value of its resources in gold better perhaps than any other mode that could be adopted.

Within the large extent of country so partially examined there are upwards of fifteen hundred ravines within which the precious metals may be found. If we assume that these deposits of drift have their origin from the decomposition of the vein stones which once crossed the ravines and which formerly made up at least one-tenth of the whole area, it would be a reasonable calculation to suppose that the freed or drift gold contained within the Sierra San Juan northern slopes would amount to more than *ten billions five hundred millions of dollars*, if all collected, and which yet remains in the ravines.

Generally speaking the ravines in this region are never more than two miles in length, without being interrupted by canons or intersected by other ravines; that is to say, those within the metalliferous region. I have not mentioned, however, one great fact which is intimately connected with the occurrence of gold in the beds of streams, alluvial bottoms and ravines, and which in this connection is very applicable, the knowledge of which is of the utmost importance to the miner.

During the drift period and the time occupied in scouring out the ravines, the flowing waters carried off everything of less specific gravity until its force was spent; by degrees it left the larger boulders, then the gravel and sand. The gold freed from the vein stone, thus disintegrated and broken up, that once occupied the space now forming the ravine, being of greater specific gravity than its surroundings was deposited upon the rocks and among debris of the ravine, the largest particles sinking to the greatest depths, until meeting with resistance from the rocks in place. Whilst in the earlier stages of the floods, and where they exercised their greatest power, much of it that was of lighter quality adhered to the clay and particles of sand, and also that which was still retained in the fragments of the vein stone broken off was carried to a still greater distance, and even as far as the wide valleys that border upon the large rivers. As the waters lost their force these smaller particles were collected upon the bars of the smaller streams, and finally, as they became still more weakened, the particles of gold were left in the ravine nearest to where the vein stone is situated.

Thus if a section is drawn from any of the ravines it will show a result similar to the following:

1st. Surface or sod—very fine specks of gold.
2nd. Allum—specks of gold somewhat coarser.
3rd. Sand and very fine gravel—their small scales of gold very light.
4th. Larger gravel and clayey sand—thicker scales, with more weight.
5. Small cobble—clay, gravel, sand and fragments of quartz. } Shot or rounded gold in small particles size of a pin's head.
6. Large cobble—bluish clay, sand and gravel. } Cucumber gold or size of a cumber seed.
7. Stiff clay—some gravel and sand. } Bean gold or size of a bean.
8. Bed Rock—Flat pieces or spoon gold, bean and acorn gold.
9. Crevice gold nuggets—round lumps—bean acorn and large shot gold.

These qualities of the metal are found in succession according to the character of the ground in which the metal exists. The heaviest and largest pieces universally found at the greatest depths and nearest, if not on the surface and in the crevices of the bed rocks, whilst the lighter particles are nearest the surface, or top of the ground.

Thus, if we prospect a ravine situated within the talcose formations, and which is nearest the centre of the latter, and find particles of gold even to a very limited quantity, or so much as to show the color upon the surface (to use a mining phrase) we may with reasonable certainty expect to find as we proceed to greater depth the metal in larger quantities.

The practical experience of the miner is always

* Basantite, a silicious stone or flinty Jasper, called sometimes the Lydian stone or Touchstone, used to determine the purity of precious stones by the color it leaves upon them when rubbed together.

better than the theoretical views of the mineralogist; but the miner, combining with his experience these scientific accomplishments, is enabled to determine the value of a claim or mining location with more certainty. This knowledge is actually necessary in the San Juan range of mountains, and without this practical experience there is but little assurance of success. * * * *

This locality is supplied with numerous streams containing a sufficient bulk of water for all necessary purposes, but as in other, and in fact all, mining countries are apart from the ravines containing the metals. * * * * *

The agricultural resources of the northern slopes of the San Juan and La Plata are comparatively small and occupy a region of country distant from the metalliferous region of nearly seventy miles.

* * * * * * *

There are a few small valleys on the Unka Weep and Dolores which offer inducements for the establishment of settlements, but the larger part of the tillable grounds are confined to the valleys of the Eagle Tail and Un Compadre rivers. These also have numerous mesas or high table lands, the greater portions of which are sterile, bearing little else than artemisian and sage. Salt springs and alkaline pools, composed of carbonates of soda and potash, abound throughout a large portion of the country skirting these rivers, and numerous canons and gorges interrupt their course.

The foot-hills of the mountains which descend on either side occupy an elevated position and contain a large number of parks well supplied with nutritious grasses, besides which are immense forests of pine timber and groves of aspen. The alluvial bottoms of the streams are very rich and well adapted for agricultural pursuits, many of which are natural meadows of mixed grasses, comprising clover, timothy, herds and blue grass, flax, oats and barley.

It is barely possible that the present scope of country suitable for agricultural purposes is of sufficient area to support the mining population which will at an early day occupy the northern slopes of the San Juan and La Plata and the Elk Horn mountains; and it may be a matter of importance for the future to test the practicability of bringing the table lands under a state of cultivation by such means as are within our reach; that these plains may be made productive at a small expense, is beyond question. * * * *

The area of this mining region will give profitable employment to 500,000 souls who must draw their subsistence from some source, and thus these desert plains, as time progresses and the mines are developed, will, from the force of circumstances, be made to bloom as a garden. There are but few remains of ancient settlements near the La Plata mountains, and these are confined chiefly to the *Rio de Nueva Sallados de los Dolores*. The most noted of these is called Asuncion, and supposed to be the ancient towns of the Jutas, Tabeguachis, one of the Apacheria. Here traces of *acquias* for irrigation are seen, and near the head of the stream appearances of former washings for gold are observed in a number of places.

It is probable that the Spaniards may have worked some of the mines of the La Plata. A trail leaves Asuncion, leading up the Dolores to the salt pyramid, and across the divide between Silver Creek or the Rio la Plata Plancha, and the Dolores to some narrow ravines within twenty miles of La Plata Peak where it is lost or ends. Here seem to be remains of ancient diggings, but no positive evidences could be found other than occurrence of drift gold in the ravine and the finding of a piece of broken pottery, having an undefinable hyeroglific stamped or etched upon one of its surfaces. After the most diligent search this was the only evidence of the former occupation of the country. Inasmuch as the Taos and San Diego trail passes through these mountains, the Spaniards may possibly have extended their explorations into some parts of the metallic region; but as there is but this one trail leading direct from the Dolores dicoverable, pointing to that direction from the San Luis valley to Asuncion, the supposition is merely conjectural.

The occurrence of hot springs, sulphurous and alkaline, are common in all countries that have been subjected to earthquakes and volcanoes. These are met with in the San Juan range, on either slope, but their frequency is to be observed more upon the northern than on the southern slopes. Their temperature is variable, being from 120° to 180° Fahr., and in one instance near a small volcanic cone, surrounded by a number of extinct craters, the heat was much above the boiling point. The feathers of a grouse was stripped from it by one simple plunge into its waters.

This interesting region of country cannot be fully comprehended in these short extracts from my notes and explorations, but the synopsis thus given is sufficient to show its importance as a mineral region of great wealth, and which at present remains unsought—untouched.

U. S. Five-Twenty Bonds.
PARKE & BOWDOIN,
No. 76 Wall st., cor. Pearl st.
HAVING been appointed Agents for the U. S. 5-20 Loan, we are prepared to receive subscriptions to the above bonds at par. Interest in gold, commencing on the day of deposit. Orders accompanied by draft on this city will receive our prompt attention.
Stocks and Bonds bought and sold on commission at the Brokers' Board. Mercantile paper and loans negotiated.

LOCOMOTIVES FOR SALE.
ONE PASSENGER ENGINE—16 Ton.
ONE SWITCHING ENGINE—12 Ton.
Both 4 ft. 8½ in. gauge.
Both of these engines are in first rate order, and will be sold very low, and are ready for immediate delivery.
Also a new first class Passenger Engine, 28 tons, cylinders 16 × 24 inches, finished in the very best style.
T. M. TYNG,
61 Cedar st.,
2136 NEW YORK.

WILLIAMS & PAGE'S
PASSENGER CAR LAMPS
FOR KEROSENE OR COAL OILS.
THESE Lamps, now in use on a large number of Railroads are very neat and ornamental, and being enclosed in a Brass Case which is firmly secured to the side of the car, **entirely avoid the dripping of oil on Passengers and Car Cushions.**
The Light is very strong and brilliant, requiring no reflectors and **lighting up** the Cars so as to give them that bright and cheerful appearance so much desired by roads for the pleasure and comfort of their Passengers. These Lamps are strong and durable, and are as easily taken care of as any in use. A full sized drawing sent when requested.
For Cars with "raised" or "high" roofs we make these Lamps with brass arms to suspend in any required manner.
Manufactured and for sale by
WILLIAMS & PAGE,
67 Water st.,
Boston, Mass.

WARNCKE & BROWNELL,
RENOVATORS AND DYERS OF PLUSHES ON CAR SEATS, STEAMBOATS, AND FURNITURE.
WE restore the color to plushes on car seats, steamboats and furniture, without removing the plush from the seat. Colors when put on, as bright and durable as new goods. Time of detention of car two days, or less. Orders for work solicited.
The process being patented, the public are hereby cautioned against infringement.
Territory and shop right for sale. Address

MUNN & CO'S
PATENT OFFICE.
ESTABLISHED 1842.

DURING the past twenty years, Messrs. MUNN & Co., in connection with the publication of the WEEKLY ILLUSTRATED SCIENTIFIC AMERICAN, (the only paper devoted to the Mechanic Arts in the country,) have acted as Attorneys for procuring letters patent in the United States and all foreign countries.

They would state that they have acted, during this period, as agents for more than

TWENTY THOUSAND INVENTORS;

In fact, they have become identified with the whole brotherhood of inventors and patentees, at home and abroad. Thousands of inventors for whom they have taken patents have addressed to them most flattering testimonials; and the wealth that has inured to the inventors whose patents were secured through their office, and afterward illustrated in the SCIENTIFIC AMERICAN, would amount to many millions of dollars!

Messrs. MUNN & Co. are prepared to attend to patent business of all kinds, in the quickest time and on the most liberal terms.

For further information, send for a pamphlet which contains the Patent Laws of the United States, and much other valuable information of importance to inventors and all others who own patent property. Also pamphlets of information furnished regarding the Patent Laws of all foreign countries.

For further particulars address

MUNN & CO.,
No. 37 Park Row, New York,
Or corner F and 7th sts., opposite Patent Office, Washington, D. C. 3m35

BRASS SWITCH LOCKS.

Williamsbridge—5.30 A. M. and 7.05 P. M.

Croton Falls, White Plains and Williamsbridge trains stop at all stations.

JOHN BURCHILL, Superintendent.

SMITH'S
Railroad Air Light Comp'y.

THIS COMPANY OWNS THE EXCLUSIVE RIGHT of **SMITH'S AIR LIGHT FOR RAILROADS,** and is prepared to sell to Roads the right to use the same. We have arrangements perfected for furnishing Lamps and Burners at about the same price charged for the Oil and Kerosene Lamps by other Manufacturers.

That Railroad Managers may know the value of this LIGHT, we annex letters from the Hon. CHAUNCEY VIBBARD, the General Superintendent of the New York Central Railroad, and also from the Master Mechanics of the same road, showing its comparative cost with that of Oil Lights:

NEW YORK CENTRAL RAILROAD,
GENERAL SUPERINTENDENT'S OFFICE,
ALBANY, November 15, 1862.

TO THE MANAGERS OF RAILROADS:

Gentlemen,—This Company has adopted and is furnishing all their locomotives with the "SMITH AIR HEAD LIGHT."

They do this both on account of economy and the very superior light it affords.

We regard it as vastly superior to any light that has ever been produced, and commend it to the consideration of railroad managers.

Very respectfully, etc.,
C. VIBBARD, Gen'l Sup't.

NEW YORK CENTRAL RAILROAD,
MASTER MECHANIC'S OFFICE,
WEST ALBANY, January 28, 1863.

DR. GEORGE HAND SMITH:

Dear Sir,—Below please find the cost of locomotive lamps burning oil on this division.

Supposing oil cost $1 57 per gallon.

Cost per hour, 5 cents.

Cost of wicks, chimneys, per year, $4 80.

Estimate cost of leakage, gumming and overflow, one-fourth of the consumption.

In the year 1861, when the lamps were all oil burners, the cost of repairs were $10 20 per year.

You will please add the overflow to the actual cost per hour, which would make 6.25 per hour.

Your most ob't servant,
EDWARD H. JONES,
Master Mechanic, Eastern Division.

300 days, 5 hours each day, 1,500 hours, 6¼c. per hour	$93 75
Repairs of lamps for one year	10 20
Wicks and chimneys	4 80
	$108 75

NEW YORK CENTRAL RAILROAD,
MASTER MECHANIC'S OFFICE,
ROCHESTER, Feb. 2, 1863.

DR. GEORGE HAND SMITH:

Dear Sir,—In answer to your inquiries in reference to your Air Light, I would state that we have upon this division of the road 23 of your lights on our first class passenger and freight engines. I find the light consumes about five feet of common gas per hour, which, at the price of gas at this place, $2½ per thousand, makes the cost of light for each engine 1¼ cents per hour.

Renewing my often expressed opinion that your light, for its reliability, its economy and superiority, far exceeds any light heretofore used on engines,

I remain, very truly, yours, etc.,
DAVID UPTON,
Master Mechanic, Western Division.

300 days, 5 hours each day, 1,500 hours, 1¼c. per hour	$18 75
One-sixth waste of gas	3 12
Repairs of lamps for one year	5 00
	$26 87

Further information may be obtained at the office of the Company, **21 Nassau st.,** or by addressing

CHAS. W. WELSH,
Secretary.

American Railroad Journal.

New York, Saturday, September 19, 1863.

The Relations of Astronomy and Magnetism to Commerce and Navigation.

This JOURNAL though popularly known for more than thirty years as the AMERICAN RAILROAD JOURNAL, is nevertheless devoted to other great interests, as its title page shows, among which are those of navigation and commerce. It will thus be found that these two subjects are fully treated in our columns, and their results carried forward from year to year by constant records of their progress and tabulated exhibits. We therefore, are always gratified to record the progress of these sciences which contribute to the safety of navigation and the extension of commerce, even if their direct application is not at first so obvious. Thus we notice with pleasure in a late Montreal Gazette an account of some important scientific arrangements which have been recently made in that city. Before we allude to them more particularly however, we would remark that to astronomy we owe the knowledge to direct the course of ships across the ocean, and to another, that of magnetism, to guide and keep them on their course, no matter whether the skies are clear and the heavenly bodies are visible or not. These two sciences have therefore not only a theoretical but a very practical character, and enable the inhabitants of the most distant parts of the globe to have constant communication and intercourse with each other, to exchange their various products with facility, and to concentrate at any one desired place, the surplus of their industry, and the supplies on which human life and comfort depend.

Men now traverse the ocean with no greater liability to accident than when travelling by land. The storms which vex the seas are just as dangerous on shore, and there is no vehicle which man has ever contrived not liable to destruction. But there are far more remedies for misfortune of all kinds at the present day than ever. And so in navigation our seamen are able to escape many dangers by their superior skill. They have accepted the teachings of science, and boldly launch their barks for the most distant oceans, with full confidence in their ability to cross them in safety; strongly and strangely in contrast with the timid mariner of the classic ages, who scarcely ventured out of the sight of land, and who often doomed by adverse winds to unexpected peril, could only imitate the example of—

"The homeless Lybian on the stormy deep,
—To call upon his country's name and weep."

One of the most important results obtained by the discoveries in magnetism as benefitting navigation is the power to communicate signals from a central point of observation to the coasts of maritime countries, or such prognostics of the weather as will enable navigators to choose the best time for their departure. This is fully practised both in England and France, and the most striking advantages have been realized from the system. In the former country the arrangement has been under the direction of Admiral Fitzroy. Another is the establishment of the magnetic observatories, of which an admirable model has been put in operation in Montreal, equal, we understand, to the best which previously existed in Europe or this country.

Another is the correction of compasses, more than ever necessary since the introduction of iron ships. Still another is the plan of the Time ball, by which the true time of 12 o'clock M. can be given to a whole city, so that there may be an uniformity of movement in clocks and watches.

In Liverpool which is a large commercial city like New York, the Time ball is found highly advantageous to navigators in taking their departure from port, since as is well-known, longitude is now easily obtained through the means of the chronometer. Every hour of a vessels' progress east or west from a known meridian is convertible into longitude with readiness and accuracy.

A few years ago a Time ball was erected in this city for a similar object. Mr. Tileston, a well-known, enterprising, and patriotic merchant, supplied the necessary funds to the extent of seven hundred and fifty dollars. The apparatus was designed and executed by the Messrs. Chester, of this city, and Mr. Hammond, the well-known chronometer regulator, watchmaker and astronomer, of William street, took charge of it. The original intention was to connect it with the Dudley Observatory in Albany, where the mean time of noon, corrected for the latitude and longitude of New York, was to be sent by electricity over the Hudson River Railroad telegraph, where, on the arrival of the current, it was to act upon a magnet in the Custom House, which liberated the ball and allowed it to drop from the mast on which it was poised. The late Gen. Mitchell took a lively personal interest in the success of the project. It was found, however, that the communication could not be made accurately within some seconds, for reasons no way affecting the principle, and Mr. Hammond undertook to give the time from his own observations.

The apparatus however, did not work to his satisfaction. Some part of it frequently gave way, and the project after having had great temporary success was abandoned. But it should by no means be left in this condition. What it requires, to be thoroughly successful, is a modification of the machinery to wind up the ball to the top of the mast, and an annual appropriation to defray the expenses of attendance. The Chamber of Commerce, or the Common Council, or the Department of the Treasury should forthwith provide the means for keeping up this admirable arrangement. But more than this, we should have a regular Magnetic Observatory for scientific pur-

poses not only, but for the advantages of a purely commercial character. The apparatus is very simple, but the results are invaluable. A memorial to this effect was presented to the consideration of the Chamber of Commerce several years since, explaining the nature and objects of such an institution by Mr. Bloodgood, associated with the editor of this JOURNAL, but it was referred to a committee and nothing ever came of it. We hope that the example recently set us by the enterprising and intelligent merchants of Montreal may excite those of our own city to reconsider the subject. The following description of what has been done in this and kindred scientific departments by the former city is exceedingly interesting.

DESCRIPTION OF THE MONTREAL OBSERVATORY.

The principal room is on the first floor, and contains a small library of books used for the different calculations, also barometers, thermometers, anemometer, globes, a telegraph apparatus in connection with the fire alarm telegraph—for the purpose of furnishing correct time to the city.

A single touch of the key causing all the church bells to strike at the hour of noon, also a quadrant and artificial horizon.

Transit Room.—Which is in an unfinished state, contains a transit instrument, chronometer, star maps all used, nautical almanac for correcting the chronometer to mean solar time.

Basement.—In this room more particularly, as also in the general construction of the building, iron has been carefully excluded, and is destined for magnetic observations, containing a dip circle, the one used during the magnetic survey of Great Britain, a declinator and instruments for vibration, and horizontal and total force; besides a small library of books for the calculations, also a barometer, hygrometer and standard thermometer.

Ascending the stairs to the leads—a flat roof—here are rain gauges, dry and wet ball thermometers, solar and terrestrial radiators, drosometer, evaporator, and apparatus for experiments on ozone, also a telescope for observing the sun's spots—possessing a large field. There is also a 3 in. Dolland's Achromatic Telescope on the first floor, the transit room is finished with a revolving dome for the purpose of receiving an equatorial, whenever any good citizen can be found to furnish one; near the entrance is a siesmometer for earthquake phenomena. There is also erected a pole for the purpose of ascertaining the amount of electricity in the atmosphere, and testing a new kind of conducting wire, and also a Whewell's Anemometer.

The observatory is 180 feet above mean sea level.

The observatory is destined only for metorological and magnetic observations, the only astronomical will be the transit of stars, solar spots and eclipses.

The observatory is so placed that a perfect north and south horizon is seen, the mountain not at all obstructing the view.

We believe that important practical results will flow from these observations, and we have no doubt that it is of provincial importance to have a magnetic survey along the whole line of the St. Lawrence below Quebec. It would render the navigation more certain, make the rates of insurance lower, and be the means of saving many lives, for magnetic variation is the fruitful parent of disaster. We believe that this variation is a determinable quantity, and it would be well for the province to have it at all costs determined.

Another and a very important addition might now be made, having a direct bearing on our shipping and commercial interest, that is the erection of a Time ball on the dome of the royal insurance buildings at the wharf, similar to those which exist in different seaports, and which would furnish time to the ships in port; this might be nnected by telegraph with the observatory.

Petroleum.

The all absorbing question at present, among those who are interested in the oil trade, is in relation to the duration of the supply of petroleum from the valley of Oil Creek, and whether the present amount of daily flow will be materially increased. At the present time, when a 1,000 barrel well is struck, the owners become millionaires in an incredibly short time. At six dollars per barrel, which is now the ruling price at the wells, this would amount to the snug little sum of $5,000 per day. A short six or eighteen months has, with a few exceptions, been the average lifetime of the flowing wells. The latter portion of their time of running is also marked by a decrease of at least three-fourths of the original flow. This, and the fact that all the wells struck have proved similar, is what tends to impair the confidence of many.

Such conclusions as the above are doubtless correct, so far as they go. But let us take a look at the reverse of this picture. We can see but little material difference in the amount produced twelve months ago and now. Oil was then selling for eighty to ninety cents per barrel, at the wells. There had been some 550 wells bored upon Oil Creek from the Sherman Well to the mouth of the Creek. The result of the new wells was to about keep up the supply of 7,000 barrels per day. The spring of the present year commenced with increased activity in the line of new wells. The high prices that had ruled the fall previous, caused almost every one who could procure a lease to commence boring a well forthwith. The prevailing idea with many was that, in consequence of so many wells going down, oil would naturally rule very low in price during the season. But the reverse proved the case. At the most unpromising, or what has been so considered previous to this season of the year, oil ruled firm at $3 to $4 per barrel, at the wells, and is now $6 per barrel. —*Oil City Register.*

Sandusky, Dayton and Cincinnati Railroad.

The earnings of this road for the years ending June 30, 1862 and 1863, were as follows:

Earnings:	1862.	1863.
From passengers	$111,938 42	$151,235 46
" freight	278,259 43	411,774 42
" mail	16,080 00	16,080 00
" express	9,344 58	10,662 04
" car mileage	12,959 41	10,063 21
" storage	1,528 59	64 98
	$430,130 13	$599,880 11
Expenses, viz:		
Maintenance of way	$68,348 02	$88,859 14
Do. renewals	18,209 49	41,626 94
Locomotive power	53,542 20	89,264 04
Do. renewals	35,365 52	15,396 82
Machine shop	12,257 21	27,821 23
Train expenses	46,972 77	44,676 70
New Freight Cars	.....	50,790 00
Station expenses	45,668 97	63,830 69
Office expenses	33,537 44	42,568 57
General expenses	4,620 39	5,724 31
Taxes	11,109 69	13,058 00
Loss and damage	1,488 15	1,476 95
	$331,119 85	$484,593 39
Leaving a balance of	$99,010 58	$115,286 72

Of this sum $80,550 have been applied to the principal, and $4,947 58 to the interest of the company's bonds due in 1856, completing the payment of that issue. The remainder has been applied to interest account on maturing securities. The report says:

The final liquidation of all past due obligations —(the floating debt of the company having been extinguished under the arrangement entered into in 1858)—leaves the company's affairs in a better condition than they have been for the past ten years, or since the process of weakening existing securities by the issuing of new ones overlaying the old, based on new works built in the name of outside corporations, was inaugurated. The bonds due in 1875 were issued subsequently to the adoption of this policy, and their holders may not complain at being overlapped by the creation of an outside security superior to their own.

The present, therefore, seems to offer a fair opportunity of capitalizing the various original securities of the Mad River and Lake Erie Company, upon some equitable plan. Several *projets* have been discussed since the partial failure of the programme adopted in 1858. Thus far, none have met the views of all; but it is to be hoped an agreement may yet be effected which will meet the acceptance of interested parties.

A review of the business of the road for the past few years, gives cause to be satisfied with prospects in the future. The company has been freed from its immediate pressing liabilities; the rolling stock and machinery have been largely improved in quality and efficiency; the track has been improved, and about fourteen hundred tons of new and rerolled iron have been laid down within the past year, leaving about four hundred tons of old iron ready for the mills.

Much work remains to be done before our road can be classed as a first class road in every particular. It was the pioneer road in the State, and consequently encountered all the difficulties which beset railway enterprises at that early day. The efforts that have been made to retrieve these errors have not always been successful; but much has been done, and more is within our reach, for the correction of past mistakes.

The receipts from freight the past year have been the largest but one since the opening of the road. As is well known, the passenger business has been on the decrease since 1853, from the loss of through travel. The efforts to retain it by building steamboats and by other expedients, involved large expenditures without corresponding returns. An improvement in the item of passenger receipts from 112,000 dollars last year (the lowest point reached,) to 157,000 the present year, is owing mainly to the development of local travel. Our freighting has improved from the same cause, to wit, a closer attention for the past few years to our local business. The efforts in this direction have been attended with gratifying results, and will be persevered in.

The cash receipts and disbursements during this year ending June 30, 1863, were as follows:

RECEIPTS.

Balance on hand, July 1, 1862	$26,229 44
Receipts from transportation	584,667 12
" lands sold	1,155 00
" stocks and bonds sold	1,329 38
" locomotive sold U. S.	10,500 00
	$623,880 94

DISBURSEMENTS.

Operating expenses, taxes, etc.	$368,139 07
Renewals, as above	107,813 76
Past due bonds—principal	80,550 00
" interest	4,947 58

Secretary and Treasurer.—L. H. LATHAM.

Superintendent.—HARVEY RICE.

Railroad Companies.—Assignment of their Corporate Powers.

AN ASSIGNMENT OF THE ROLLING STOCK AND REVENUES OF A COMPANY IS NOT A TRANSFER OF ITS CORPORATE ENTITY OR PROPERTY. PATENT BRAKES—USE OF THE SAME BY THE ASSIGNEE.

The complainant, Asahel Emigh, brought this action, as the assignee of the State of Wisconsin, of a patent right issued to Francis A. Stevens, for a combination and arrangement of levers, link rods, and shoes or rubbers, whereby each wheel of both tracks of a car on a railway is retarded with uniform force when the brake is put in operation, against Selah Chamberlain, for operating or causing to be operated, the La Crosse and Milwaukee Railroad in the State of Wisconsin, by the use of cars with the improved brakes.

It appears that the company had purchased the right to use the brakes of F. A. Stevens. Subsequently they mortgaged or assigned the use of the rolling stock and the revenues of the company to the defendant, for the purpose of paying a debt due from the company to the defendant, and other defined objects. The defendant continued to use the patent brakes in question, and the plaintiff then sought to recover against him for the use of the same, on the ground that Stevens had imparted the right of use to the company only, and not to the company's assignee.

The questions to be determined involved the nature of the assignment of the company to the defendant, and the powers confered upon the company by Steven's license to use the brakes upon their road in the State of Wisconsin.

The case was determined by the District Court of the United States for the District of Wisconsin, which court now held that the defendant used the brakes as the agent of the company, and not as a purchaser; and his use of them, in the name of the company, was exclusive, in the meaning of the license. The court dismiss the complainant's Bill. The following is the opinion in full delivered at the decision of the case.

MILLER J.—The complainant, as the assignee for the State of Wisconsin, of a patent right to Francis A. Stevens for a combination and arrangement of levers, link-rods, and shoes or rubbers, whereby each wheel of both tracks of a car on a railway is retarded with uniform force when the brake is put in operation, brings this bill against defendant for operating, or causing to be operated, the La Crosse and Milwaukee Railroad in this state, by the use of cars with the improved brakes. The defendant set up a deed from the Patentee, Francis A. Stevens, given previous to complainant's assignment, to the said railroad company, whereby, in consideration of six hundred dollars to him paid in full satisfaction, he licensed and conveyed to the company the full and exclusive right and liberty of using the said improvement on any or all of their own cars, over any part of their road. Defendant further shows that, by an instrument of writing called by him a lease or mortgage, the company granted to him, for an indefinite time, its entire railroad and road route, together with right of way and depot grounds, and all buildings and property of every description, including the rolling stock. He to operate the road and receive all the revenues, and out of them defray all expenses of operating the road, purchasing additional rolling stock, paying interest of liens, and the residue to apply towards a claim of his own against the company. And when his claim should be paid, either by the company, or out of the revenues of the road, the property to revert to the company. The company was using the patented improvement upon the cars that passed to Chamberlain, and which he continued to use. Chamberlain, after operating the road for some time under the deed of the company, was superseded by an order of this court appointing a receiver.

The assignment to complainant excepts the license to the company. Whether Stevens would be the proper person to claim damages is not made a question by the pleadings. Can the complainant require defendant to account to him, is the only question submitted.

The deed of Stevens to the company licenses and conveys the full and exclusive right of using the improvement on their own cars. There is no power granted to the company to rest the right in any person, by conveyance or otherwise. It is simply a license.

In order to test the right set up by the defendant, we must bear in mind that the railroad company is incorporated by a law of the state, and to such Stevens made the license, and as such the company made the assignment to defendant. The duties imposed upon the company by its charter, were not fulfilled by the construction of the road. Important franchises were granted the company to enable it to provide the facilities to communication and intercourse required for the public convenience. Corporate management and control over these were prescribed, and corporate responsibility for their insufficiency was provided, as a remuneration to the community for the legislative grant. The corporation cannot absolve itself from the performance of its obligation without the consent of the legislature. Defendant could only operate the road under and subordinate to the charter of the company; and not he but the company is responsible for the performance of all the corporate duties to the public. He only could perform those duties in the name of the company. The franchises of the company were not, and could not be vested in him. He was nominally substituted for the company in the active use of the road and property.

The corporation as a creature of the law, must use the franchises granted it by means of officers of its own appointment, either directly or indirectly.

It is contended on the part of the complainant, that defendant was a mortgagee in possession, and as such, he held under a title, in the nature of a conveyance from the company. This court has uniformly considered the rolling stock of a railroad company as a fixture not liable to levy and sale apart from the realty. And we have placed liens by mortgage of those companies on the same footing as of individuals. In this State the mortgagor is the owner of the premises, until a sale is made in pursuance of a decree of the court. The note and mortgage are choses in action. The morgagor may put the mortgagee in possession of the mortgaged premises until the debt is paid by receipt of rents and issues; but the mortgagee would not hold adversely to, but under the mortgagor.

Technically, the deed under which defendant held possession of the road, was not a mortgage. The defeasance does not make it a mortgage; as, without it, the company would have the equitable right to regain possession upon discharging its debts to defendant, and to require him to account. The deed is an assignment of the revenues of the road to a preferred creditor, with the privilege of using the road and property of the company for the mutual interest of the debtor and creditor. The rolling stock and the road, at the date of the assignment to defendant, were subject to mortgagee, whose accruing interest he became obliged to pay out of the revenues of the road. If he replenished the stock, he did so from the same source. The company being insolvent, devised the scheme of placing their property in the hands of defendant, for the purpose of completing the road to La Crosse, of paying the annual interest of liens, and of satisfying his claim.

Although this court pronounced the arrangement fradulent and void as to creditors, yet it was valid between the parties, and this suit can be defended under it. The deed to defendant is not a conveyance of the property. The rolling stock was the property of the company in defendant's hands. It might as well be claimed that the receiver appointed by this court should account for the use of the patented improvement, which, I presume, will not be pretended. The receiver holds the property of the company for the benefit of its creditors. Defendant did so with the con-

sent of the company, for the same purpose. In both cases, the company is the owner of the cars with the patented improvement attached. The company did not divest itself, by its deed to defendant, of its corporate entity or property.

Defendant is to be viewed in the light of an agent and trustee. He was a mere substitute for the company, and his use of the cars was the same as that of the company, and exclusive as to third persons or other interests in the meaning of the license.

The bill will be dismissed.

Milwaukee and St. Paul Railway Company.

The Milwaukee and St. Paul Railway Company was organized May 5, 1863, and is the successor, by purchase, of the late La Crosse and Milwaukee Railroad Company, the Milwaukee and Western (commonly called the Watertown) R. R. Co., the Milwaukee and Horicon R. R. Co., and the Ripon and Wolf River R. R.

The property embraces 233 miles of main track of road, equal to any first-class single track railroad in the country. The Company have purchased the iron for, and are building 28 miles additional road, from Columbus to Portage, thus making them the owners in fee of a through and complete line of road, from the city of Milwaukee, on Lake Michigan, to La Crosse, on the Mississippi River. They have a branch extending from Watertown to Sun Prairie, which is within 12 miles of Madison, the capital of the State; this 12 miles, when finished, will make the distance by this route about 20 miles less than by any other route from Milwaukee to Madison. They have, also, a branch extending from Horicon to Berlin, and from near Ripon to Omoro, on the Fox River. The Company operate 95 miles, from Milwaukee to Portage, under orders of the United States District Court, accounting to that Court for its use. The Company operate, in all, 346 miles of railroad —28 miles of which are in process of construction; they own, absolutely, nearly all the rolling stock and equipments in use on the whole line of road, embracing—43 locomotives; 29 first class, and 6 second class, passenger cars; 11 baggage and express, 662 covered, 132 platform, 11 rubble, and 86 hand cars, valued at $1,200,800. Used by the Company as follows:

* *Main Line.*—31 locomotives; 19 passenger, 6 second class and baggage, 3 baggage, 3 mail and express, 448 covered freight, 6 caboose, 76 platform, 48 hand, and 8 rubble cars.

Horicon Division.—5 locomotives; 3 passenger, 2 baggage, 1 caboose, 89 covered freight, 40 platform, 6 hand, and 3 rubble cars.

Watertown Division.—7 locomotives; 5 passenger, 3 baggage, 125 covered freight, 16 platform, 15 gravel and 32 hand cars.

The cost of building the 28 miles of road is contracted at a price which will not exceed $394,000. $49,000 duties, and the freight on iron, are required to be paid in gold, the price of which will increase or diminish the cost of the road.

To pay for said 28 miles, the Company have $200,000 in mortgage bonds, which amount is embraced in the $4,600,000 below named; the balance of the cost will be paid for from the sale of stock, if a satisfactory price can be had therefor, otherwise it will be paid out of the earnings of the road.

The building of the 28 miles, from Columbus to Portage, removes the only known objection to the Company receiving a patent for the lands donated by Congress to aid in constructing this line of road. Upon finishing this 28 miles, the Company will be entitled to receive about 460,000 acres of land. This claim to lands, and all the Company's title thereto, is covered by the mortgage; and the whole proceeds from sales of lands are mortgaged as and for a sinking fund, for the payment of the Company's mortgage bonds, at their market price.

The lands are deemed well worth the Government price, $2.50 per acre; at that price they will reduce our mortgage debt about $1,000,000. The real value of the lands is variously estimated—some competent persons value them at a price which will cancel the whole mortgage debt of the Company.

It is fully believed that, with prudent and economical management, the Company are now earning sufficient to pay a dividend on the whole present cost of the road—$8,144,138.

The future railroad connections of this Company are full of promise. The Winona and St. Peters road is under contract to responsible parties west from Winona to Owatonia, 88 miles. The Minneapolis, Farribault and Cedar Valley Road is in process of construction, by able and responsible parties, from Owatonia to Minneapolis, 70 miles. The St. Paul and Pacific road is in operation for 17 miles north, and within thirty days will be extended to Anoka—30 miles—and is under contract, and will be completed within a short time to Watarb, 80 miles.

A company of English capitalists have recently bought all the rights and property of the Hudson Bay Company, at $35,000,000. It is understood that the new company expect to make their profits by developing and settling up the country; that their unemployed capital is very large; that to induce immigration, they are to build an extensive system of railroads—to do which they must first build northerly in our country to Pembina, either from the northerly terminus of the St. Paul and Pacific road or from Superior City. In either event, their supplies, emigrants, and equipments are likely to be transported over the Milwaukee and St. Paul Railway. If but a small part of the expectations of this English company are realized, the Milwaukee and St. Paul Company will have business enough from this source alone to pay reasonable dividends.

The Company owe no floating debt, and have no other liabilities than its mortgage bonds and the income bonds below named.

The mortgage covers the entire property of the company of every nature and kind, and the mortgage bonds are all similar in form and equally secured upon the whole line of road.

It is probable, at some future day, the Company will acquire the absolute ownership of the ninety-five miles now operated by them under the orders of the United States Court; in which event, the mortgage contains a provision that it may be enlarged $2,000,000, and the Company are authorized to issue $750,000 additional of preferred stock, and $1,000,000 of common stock.

The amount of the preferred or common stock below named is liable to be increased about $200,000 for building the road from Columbus to Portage, and about $289,000 to pay or retire the income bonds.

Present cost of road and entire property (261 miles) $8,144,138,=$31,203 per mile.

Divided as follows, viz.:

		Per mile.
1st and only mort., 7 p.c. 30 y'rs.	$4,600,000	=$17,624
Income bonds	289,138	
Preferred stock, 7 per cent.	2,255,000	
Common stock	1,000,000	
Total cost	$8,144,138	=$31,203

Articles of Association of the Purchasers of the La Crosse and Milwaukee Railroad Company, to organize a Corporation under the Statute Laws of Wisconsin, under the name of the Milwaukee and St. Paul Railway Company.

Whereas, that part of the La Crosse and Milwaukee Railroad and the property, real and personal, described in the mortgage deed made by that Company to Greene C. Bronson, James T. Soutter, and Shepherd Knapp, dated December 1, A. D. 1856, in trust to them to secure the payment of the indebtedness therein named, and also described in a deed, executed by the same parties, supplemental to the mortgage deed, in trust, last above named, and dated Jan'y 28th, A. D. 1858, both of which deeds are recorded in the office of the Secretary of State for the State of Wisconsin, and copies thereof are on file in the District Court of the United States for the District of Wisconsin, in the case of Bronson, Soutter and Knapp, trustees, complainants, against the La Crosse and Milwaukee Railroad Company and others, defendants, to which copies, records, and files reference is here made for a more particular description of the property, real and personal—has been sold in pursuance of certain foreclosure proceedings had in the United States District Court for the District of Wisconsin, on the complaint of said Greene C. Bronson, James T. Soutter, and Shepherd Knapp, trustees, under said mortgage deed of trust made by the said La Crosse and Milwaukee Railroad Company, dated December 31st, A. D. 1856, and of a certain supplemental mortgage deed of trust, executed by the same parties, and dated January 28th, 1858, to the records of which Court, and to the proceedings had therein in said action, reference is here made for a more full and particular statement thereof.

And whereas, the undersigned have purchased said road at said sale, and all its property, real and personal, franchises, as described in said deeds.

Now, therefore, be it known that we, the undersigned, purchasers as aforesaid, being desirous of forming a corporation, under and by virtue of the laws of the State of Wisconsin, do hereby associate together for that purpose, and do hereby declare the following to be the certificate or articles of association, and we execute the same in duplicate, to the end that one may be filed in the office of the Secretary of State for the State of Wisconsin, and the other to remain in the records of our

* The rolling stock on the Main Line is owned jointly by the Milwaukee and St. Paul Railway Company, and the creditors of the Eastern Division of the late La Crosse Railroad Company, in the following proportions, viz.:

Milwaukee & St. Paul Co.		Creditors E. D.	
Locomotives	87½ per ct.	12½ per ct.	
Covered freight cars	74 "	26 "	
Passenger "	95 "	5 "	
Baggage & mail cars	100 "		
Platform & caboose "	100 "		

corporation, as a record of our corporate rights, privileges, and immunities.

First.—Our corporate name shall be the "Milwaukee and St. Paul Railway Company."

Second.—The number of Directors shall be not less than nine or more than thirteen, and each Director, from and after ninety days from this date, shall own at least one hundred shares of the capital stock of this corporation: and if, at any time, any Director shall cease to own such amount, he shall be disqualified from being such Director, and his office shall be from thenceforth vacant.

For the first year, and until others are chosen in their place, the following persons are the Directors: Isaac Seymour, N. A. Cowdrey, Horace Galpen, David M. Hughes, William Gould, Frederick P. James, George Smith, all of New York; Asahel Finch and William H. White, both of Milwaukee.

Third.—Our capital stock shall not exceed, except as hereinafter provided, $4,200,000, divided into 42,000 shares, which said shares shall be subdivided as follows:

An amount not exceeding $3,450,000, or 34,500 shares, shall be set apart and designated as "Preferred stock," and the full sum of $100 per share we hereby declare and acknowledge to be paid thereon, except on so much of this class as is hereinafter designated as "Scrip preferred stock;" and on this scrip stock, we hereby declare and acknowledge the sum of one dollar per share to be paid.

The balance of said capital stock of $750,000 or 7,500 shares, shall be designated as common stock; and we hereby declare and acknowledge the full sum of one hundred dollars per share to have been paid thereon.

Of the said $3,450,000 preferred stock, an amount not exceeding $2,200,000 at par, or 22,000 shares, shall be set apart and designated as "Scrip preferred Stock;" the scrip preferred stock here named, or hereafter named, shall not, at any time, exceed the amount of outstanding mortgage bonds hereinafter named.

The scrip preferred stock shall not be subject to any assessment, and shall entitle the person, in whose name it stands upon our books, to all the rights and privileges of other stockholders, except that it shall not entitle the holder to any dividend, or other profit or increase from the income or assets of this Company.

It shall be issued in certificates of five and ten shares each, and shall accompany each mortgage bond of the Company.

The holder thereof shall have the right, at any time within ten days after any dividend shall have been declared, and become payable on the preferred stock, to make the scrip preferred stock attached to his bond full paid stock, upon the surrender to the Company of the mortgage bond named by its number in his scrip certificate, and bond he shall be entitled to receive therefor the same number of shares of preferred full paid stock, and entitled to dividends.

The said preferred stock, except said scrip stock, shall be entitled to a dividend of seven per cent. per annum, from the net earnings of each current year, after payment of interest on all the mortgage bonds, if the Company earn so much during the current year, and before the payment of dividends to any other class of stockholders; but the Company may reserve a reasonable working capital or surplus, before the dividend shall be declared or paid on said preferred stock, which surplus shall not exceed, at any time, the aggregate sum of $250,000, over and above the floating or unfunded debt, and the accrued interest on the mortgage bonds. If the net earnings of the Company are not as much as seven per cent. in any one year, then the said preferred stock shall receive, for that year, a dividend of whatever the said net earnings are, after the payment of interest on the mortgage bonds, and the reasonable reserve for a working capital as above described. Said preferred stock shall not have any claim upon the earnings of any other year, for the non-payment of dividends of any preceding year.

And whenever the Company earns sufficient, over and above the payment of interest on the bonds and the reserve above named, to pay a greater sum than seven per cent. on said outstanding preferred stock, and seven per cent. on the common stock, then the said preferred stock shall share *pro rata* with the common stock in such earnings.

Fourth.—The Directors of the Company shall have power to increase the said capital stock, as follows, viz.: To acquire, by purchase or otherwise, either the road and property now known as the Eastern Division of the La Crosse and Milwaukee Railroad Company—or any bonds secured by mortgage thereon—the sum of $4,000,000, which shall be subdivided as follows, into the Preferred Stock named in the Third Article hereof, and in addition thereto, and as a part thereof, $2,750,000 or 27,500 shares, of which $2,000,000, or 20,000 shares, shall be designated as scrip preferred stock of the same class, and to be issued and used in the same manner as is provided in the Third Article hereof. The balance of said $4,000,000 increase—$1,250,000, or 12,500 shares—shall be in addition thereto, and as a part thereof, of the common stock, as provided in said Third Article.

And if, at any time, the Directors deem it for the best interest of this Company to acquire, by purchase, or otherwise, the road and property not known as the Milwaukee and Western Railroad—commonly called the Watertown Road—or any bonds of said road secured by mortgage thereof, then, and to that end, and for the construction thereof from Columbus to Portage, and for other uses of the Company,—the Directors are hereby authorized to increase the capital stock, and to issue the like amount of bonds, preferred stock, scrip stock, and common stock, as named in the previous paragraph of this article and in addition thereto.

And if, at any time, the Directors deem it for the interest of this Company to acquire, by purchase or otherwise, the road or property now known as the Milwaukee and Horicon Railroad—or any bonds of said Company, secured by mortgage of said road—then, and to that end, the Directors are hereby authorized to increase the capital stock, and to issue it in addition to the amounts previously stated, as follows, viz.: of the preferred stock, $800,000, or 8,000 shares, of which $400,000, or 4,000 shares, shall be designated as scrip preferred stock, of the same class, and to be issued and used in the same manner as is above provided; and to issue of the common stock, $250,000 or 2,500 shares.

If at any time the directors deem it for the best interest of this Company, to acquire, by purchase or otherwise, the road or property of any railroad company, connecting with the railroad of this Company, and which they are now, or hereafter shall be, authorized by the laws of Wisconsin to consolidate or join stock with; then, and to that end, the directors of this Company are hereby authorised to increase and issue either or both classes of its capital stock, in addition to the amounts above provided, to an amount not exceeding the gross amount of the capital stock of the company acquired, consolidated, or joined stocks with.

Fifth.—This corporation shall have all the powers, privileges, and immunities of railroad companies under the laws of Wisconsin; and especially to sue and be sued, to acquire, use, and sell, bargain, lease, and convey all kinds of property, real and personal, necessary or convenient to operate, use, and maintain said railroad, or the part or the whole of any other railroad hereafter acquired by them within the State of Wisconsin. To make any by-laws for the government and management of the corporation, or its officers, not contrary to the laws of Wisconsin, or of the United States. To make, have, and use a common seal, and the same to alter and renew at pleasure. And the said corporation is hereby invested with all the powers, privileges, and immunities, which are necessary or convenient to carry into effect the purposes and objects of this corporation as herein expressed.

The said corporation is hereby authorized to take, transport, and carry property and persons by railway, by force and power of steam, or of animals, or of any mechanical or other power, or of any combination of them, which said Company may choose to apply, and from any part of the city of Milwaukee to the Mississippi river, and to and across said river, and to and from all intermediate places. They are also authorized and empowered to lease, buy, purchase, receive, hold, use, sell, and convey all the property and franchises, furniture, and equipments, real and personal, of the La Crosse and Milwaukee Railroad Company, the Milwaukee and Minnesota Railroad Company, the Milwaukee and Western Railroad Company, the Milwaukee and Horicon Railroad Company, or of any other railroad company to which either of the above-named companies is or may be a successor; or with which this Company may join stocks, or consolidate with, also the capital stock of either of them, and any or all mortgage bonds, or other evidences of debt made by either of them, and when purchased by this Company, they shall have all the legal and equitable rights that the holders thereof had before their sale to this Company.

Also, to support, maintain, hold, use, sell, and convey, one or more steam ferry-boats, to be used on the Mississippi river.

Also, to purchase, hold, use, sell, and convey, upon this line of railway or elsewhere, any materials, engines, cars, steam ferry-boats, or any other property, real or personal, necessary or convenient for this corporation, and for their use in transporting persons and property, to purchase, receive and hold, and to sell and convey such real estate as may be necessary and convenient in accomplishing the object for which this Company is incorporated.

This Company shall also have all the powers, rights, privileges, and equities which are or were had by the La Crosse and Milwaukee Railroad Company, to acquire, receive, hold, bargain, sell, and convey lands; and they shall also have power to purchase, acquire, receive, hold, bargain, grant, sell, and convey all or any part of the lands, or the appurtenances thereto, which have been heretofore, or shall hereafter be, granted or donated by the United States to the State of Wisconsin, to aid in the construction of railroads in that State, or by either of them to aid in building the road of this Company, and also all rights, equities, or things whatsoever pertaining to said lands; and also to have, hold, bargain, and sell all claims, demands, or equities to said lands, against the United States, the State of Wisconsin, or against any and all persons or corporations whatsoever.

Also, to fix, regulate, and receive the tolls and charges by them to be received for transportation of persons or property.

The said corporation shall have power to build and construct any new line of railway necessary or convenient in straightening the old line, or in extending it so as to conform to the requirements of the charters of either of the companies herein named, or with the law of the State of Wisconsin, and to build or extend their line of railway in such a manner and form, and to such place or places, now or hereafter authorized by law, as the Directors deem for the best interest of the Company, but no expenditure shall be made for this purpose, unless it is from the surplus earnings of the Company, after providing for the payment of interest on all its mortgage debt, then outstanding.

Sixth.—The Corporation shall have power to issue bonds in some of $500 and $1,000 to an amount not exceeding two million two hundred thousand dollars, unless the Company shall purchase or acquire either the said Eastern Division of the La Crosse and Milwaukee Railroad or some or all of the bonds which are a lien thereon, known as first mortgage Eastern Division, City of Milwaukee mortgage, or the second mortgage so called of said Eastern Division, in which event the Corporation is authorized to issue an additional

amount of said bonds not exceeding two million of dollars, and unless the Corporation shall purchase or acquire either the said Milwaukee and Western Railroad (commonly called the Watertown Road) or some or all of the bonds which are a first lien thereon, and shall build or undertake to build or extend said road from Columbus to Portage, in which event the Corporation is authorized to issue an additional amount of said bonds not exceeding two millions of dollars, and unless the Corporation shall purchase or acquire either the Milwaukee and Horicon Railroad or some or all the bonds which are a first lien thereon, in which event the Corporation is authorized to issue an additional amount of said bonds not exceeding four hundred thousand dollars. All of said bonds shall bear an interest of not exceeding seven per centum per annum, the principal and interest payable in the city of New York, the interest semi-annually, the principal within thirty years from date; they shall also contain a provision that if the Company make default in the payment of interest, or in the application of the Sinking Fund, as hereinafter provided, for six months, the principal shall thereupon become due, without demand or notice. The said Corporation shall have power to secure the payment of all of the bonds above authorized to be issued, by a mortgage or trust deed upon this franchise, and all the real and personal property of the Company, now owned or to be hereafter acquired by them, and to embrace the entire corporate property, and all its franchises and privileges.

The mortgage shall also contain a provision for a sinking fund for the payment of said mortgage bonds, by which the new Company shall obligate themselves to pay to the trustees of said mortgage bonds all such sums of money, less the expenses of sales, as shall be derived from the sale of any lands which may have been or shall hereafter be donated or granted by either the United States or the State of Wisconsin, to aid in building this road, or that shall in any manner be acquired by this Company. And said lands shall be fairly and equitably valued and classified by the Company, or by such persons as they together shall appoint; and upon sale of said lands, said mortgage bonds may be received at par, and accrued interest in payment therefor, and the bonds thus received in payment shall be immediately cancelled. The Company shall keep a proper registry or account of all the bonds thus paid by them, and the number or amount of bonds thus cancelled shall be reported by said Company to the stockholders, at each annual meeting, and said bonds shall be presented and shown at said meeting. And said trust deed shall contain all other reasonable and proper provisions for making said lands the most productive and available to the Company, as a sinking fund for the payment of said bonds.

The bonds secured by said mortgage shall be convertible, at the option of the holder, into the preferred stock, at any time within ten days after any dividend shall have been declared and become payable on said preferred stock.

The said mortgage deed and bonds shall be signed by the president, or vice-president, and secretary, and the seal of the Company shall be affixed thereto.

And except as herein expressly provided, the corporation shall have no power or authority to mortgage or otherwise encumber their property, real or personal, unless the assent in writing of a majority in interest of the owners and holders of all the capital stock issued by said corporation shall be first had and obtained, authorizing the same, and no assent shall be taken from agents, or by proxy, unless the power of attorney held by the agent or proxy shall expressly authorize such assent.

And in the event of this Company acquiring the said Eastern division of the La Crosse and Milwaukee Railroad, the said mortgage or trust deed, shall also contain a provision requiring so many of the mortgage bonds above authorized to be issued as are reserved for the payment of the first mortgage Eastern division, to be cancelled from time to time as the present sinking fund on that mortgage shall have cancelled of that mortgage.

The said mortgage, or trust deed, may also contain covenants and agreements authorizing the bondholders to vote in all stockholders' meetings as follows: each one hundred dollars of the principal of the outstanding bonds shall be entitled to one vote; and giving the bondholders the same *pro rata* voice in the management of the Company with, and as if they were stockholders to the amount of their bonds.

Seventh.—The immediate government and direction of the affairs of the Company shall be vested in a board of not less than nine nor more than thirteen directors; and after the period for which the present directors are designated expires, said directors shall be chosen by the stockholders of said Company by ballot, at their annual meeting in each year, and shall hold their office until the next annual meeting of the Company, or until others are duly elected, and qualified to take their places as directors.

The preferred stockholders shall elect the directors until a dividend shall have been earned, declared, and paid on the common stock, and, until then, the common stockholders shall have no vote or voice in the election of directors.

The said directors shall elect one of their number president of the board, who shall also, by virtue thereof, be president of the Company, and shall also elect a vice-president from one of their number. They shall also appoint a secretary, and such other officers or agents as the necessity or convenience of the Company requires.

A majority of the directors of the Company shall constitute a quorum to do business; a less number may adjourn from time to time.

In all meetings of the stockholders of said Company, each share shall entitle the holder thereof to one vote, which vote may be given by said stockholder in person, or by lawful proxy. But this shall not authorize a common stockholder to have a vote for the choice of directors until a dividend has been paid on the common stock, as above provided.

In case it shall so happen that an election of directors shall not be made on the day appointed for that purpose, said corporation shall not for that cause be dissolved, but said election may be had on any day to which the stockholders shall adjourn, or which shall be appointed by the directors. And said directors shall have power to fill any vacancy which may occur in their board by death, resignation, or otherwise. Also to add to their number so as not to exceed thirteen in all.

The said directors shall have power to make and prescribe such by-laws, rules, and regulations as they shall deem proper and needful, touching the disposition and management of the stock, property, estate, and effects of said Company, the transfer of shares, the duties and conduct of their officers, agents, and servants, and all matters whatever which may appertain to the concerns of said Company, not contrary to those established by the stockholders, or to this act, or to the laws of the State of Wisconsin, or of the United States.

Also, to petition and apply for any law of the State of Wisconsin, in alteration hereof, but such law shall contain a clause requiring the same to be submitted to the stockholders for approval, upon which the validity of any alterations hereof shall depend.

Eighth.—The signing of this certificate or articles of association is hereby declared to be a special meeting of the stockholders, and a vote, and the assent of the stockholders to borrow money, and to mortgage the road for the amount, as above set forth, and also to be a waiver of any notice required of the meeting on that subject.

Ninth.—The certificates of stock issued by this Company, shall, upon their face, be made subject to all the terms and conditions of these articles of association.

Tenth.—Upon the dissolution of this corporation, after the payment of all its debts, the remaining assets shall be divided among the different classes of stockholders, according to their preferences, that is to say, the preferred stock, except the scrip stock, shall be first paid in full, and the balance divided among the common stockholders *pro rata*. But this corporation shall not be dissolved by any act of the Company, without an affirmative vote of two-thirds of each class of stockholders.

Eleventh.—These articles of association may be modified, altered, or amended, at any annual or special meeting duly called, at which a majority in interest of each class of stockholders shall be present, and voting in the affirmative. But no stockholder shall become liable to pay any money by any such action, unless he shall have voted therefor or assented thereto.

Twelfth.—Annual meetings of the stockholders for the choice of directors shall be held in the State of Wisconsin, in the month of June in each year after 1864, which meeting shall be called by the directors, who shall specify the time and place for holding the same. And at least thirty days previous to each annual meeting, the directors shall send through the post-office to each stockholder, to the address as shown by the Company's books, a full and specific statement of all the business, acts, and doings of the corporation up to the 1st day of January preceding.

Witness our hands at the city of Milwaukee this 5th day of May, 1863.

WM. WALLACE PRATT.
WM. H. WHITE.

Peninsula Railroad.

From parties from Little Bay de Noc, we learn that the Peninsula road is being pushed forward with great energy, that from 800 to 900 men are at work on the grade and in getting out the ties. Several cargoes of the iron have arrived at Sand Point. It looks as if the promise made that at least twenty miles of the road would be completed before winter would be more than fulfilled.

It is found much less difficult to obtain labor over there than here, for the reason that it is much nearer the populous towns and cities on Lake Michigan, and we predict the completion of the road will have a most healthy effect upon the labor of the whole iron district and also upon that of the copper range, when the connection reaches some point upon it, which will be done in a very few years.

The work at this end of the road is also being prosecuted with considerable vigor.—*Lake Superior News.*

Exports of Breadstuffs.

The annexed statistics of the annual export of breadstuffs for a series of years is from the Circular of Mr. Edward Bill. The export trade of this country, in breadstuffs, to Great Britain and Ireland for the past three years, has greatly exceeded that of any former period, and its importance is duly estimated by all reflecting minds. The tables are made up to the end of the cereal year, and may be relied on for their general accuracy. In addition to the English and continental shipments, the clearances to Mexico, Brazil and other South American ports, the West Indies, British Provinces, etc., for the last year amount to 1,825,143 bbls. flour, 85,174 bush. wheat, 599,894 bush. corn, 283,598 bush. oats, 50,889 bush. barley, 15,374 bush. rye, 134,280 bbls. corn meal, 6,364 bbls. rye flour, and 29,340 bush. peas. This city has shared largely in the foreign business, the total exports of the year to all ports footing up 2,691,033 bbls. flour, 22,899,648 bushels wheat, 10,503,767 bushels corn, 487,672 bushels rye, 283,598 bushels oats, 50,889 bushels barley, 78,909 bushels peas, 6,364 bbls. rye flour, 135,344 bbls. corn meal. The wheat crop of the present year throughout the country is reported to be fully an average one, (although not free from some local injuries,) and has been gathered in good order Of corn the crop is large, but a late severe frost

has injured it in some sections, to what extent is not yet known.

Export of Breadstuffs to Great Britain and Ireland from Sept. 1, 1862, to Sept. 1, 1863.

Atlantic and Great Western Railway.

We would draw the attention of such of our friends as are interested in this undertaking, to the following official notice:—"The main line from Salamanca to Akron is now in active operation. By extension of the rails from Franklin to Titusville, in September, the oil regions will be connected with the main line by a loop of 60 miles—giving control of the traffic east and west. The Cleveland and Mahoning, many years open from Warren to Cleveland, on Lake Erie, has been leased, and a direct entrance into the important harbor of Cleveland has been obtained. Treaties for interchange of traffic with all the leading railways have been made. Mr. Kennard, the engineer in chief and vice president of the Atlantic and Great Western, is actively pushing forward the works, and will reach Cincinnati in October, completing the junction with the Ohio and Mississippi. The Atlantic and Great Western property, before the close of this year, will consist of—the main line from Salamanca to Cincinnati, 438 miles; from Warren to Cleveland, 60 miles; branches, 60 miles; total, 558 miles, through the richest portions of the five Free States of New York, Pennsylvania, Ohio, Indiana and Illinois; and control the only direct route, without change of carriages, between the cities of New York and St. Louis, with an ample supply of rolling stock, entirely new, of the most approved construction, built under the superintendence of Mr. Kennard."—*Satterthwaite.*

Railroad in Buenos Ayres.

We learn by advices that the works of the Southern or Chascomus are likely to be soon commenced. The communication from the Government respecting the recognition of the contract with Messrs. Peto and Betts had been taken into consideration by the Chambers, and in the course of a few days a decree was voted by both Houses authorizing the Government to approve the contract after being examined by professional men, which formality was being complied with. Mr. Hopkins had presented a scheme for the canalisation of a part of the Parana, which will lessen by fifty miles the sailing distance between Buenos Ayres and Paraguay; the project was before the House, and there was every reason to believe it would be favorably received. In relation to Mr. Wheelwright's Rosario and Cordova, the *Buenos Ayres Standard* states—"Men of every shade of politics watch with anxiety the progress of the works of the Great Argentine Central, as it is believed by persons of considerable experience that when that road is open to Cordova our exports will be doubled or considerably augmented. Coal has been discovered in several of the interior provinces. Copper abounds in Cordova, silver in San Juan, and wine and sugar in Mendoza; yet, owing to the enormous freights, none of these valuable products ever find their way to the Atlantic seaboard. The railroad will open up these countries, which as yet consume scarcely any of our English manufactures, simply because, their produce being unsaleable, they have not the wherewith to pay for them. Every exporter or manufacturer has a direct and positive interest in the success of this enterprise, which, if carried out, will plant English shopkeepers at the foot of the Cordillera."—*Herapath.*

Strange Contest about Oil Wells.

On the Story farm, some five miles from this place, are five wells, all within a space of about five acres, viz: The Ladies' Well, which formerly produced 300 barrels per day; the Eicholtz, 350; Dalzell & Ewing, 500 barrels; the Columbia Oil Co.'s well, and Ritchie, Geo. & Co.'s well. These two latter are new wells, and have never flowed much oil. All these wells are evidently connected with each other, for upon pumping one all the rest will pump oil. The Columbia Co.'s well appears to be the key to the whole of these. Upon removing the tubing from it all the rest were stopped, and have been so for some time past.

Numerous have been the efforts made by the different wells to test their individual capacity, but as they are all separate interests, some one of the number would pull up their tubing as soon as the others commenced to work. For several weeks past all the parties have been stripped and ready for the fight. When one well commenced operations, all the rest did likewise. The one failing to get oil as soon as he wished, would pull up the tubing and stop the rest. This state of affairs continues up to the present date, and is what we should consider expensive amusement, as we have to watch over each other all the time. Would it not be better for all parties to compromise the matter in some way, as the locality where these wells are is on the best producing territory on the creek.—*Oil City Register.*

Greek Fire.

The name "Greek fire" is applied to a peculiar compound of bitumen, naptha and pitch, that burns on the surface of, or under water. It is composed largely of what the chemists call "arsenical alcohol," most destructive in its effects, and, in the course of its discharge, emitting a most offensive odor. "Greek fire" has frequently been employed in European wars, but not often in modern times. The secret of its preparation and use was derived from a native of Heliopolis, Syria, about a thousand years ago.

Railroad Earnings—Weekly.

The traffic of the Great Western Railroad for the week ending Sept. 4, 1863, was as follows:

Passengers	$27,095 08
Freight and live stock	21,572 43
Mails and sundries	1,240 86
Total	$49,908 37
Corresponding week of 1862	46,350 04
Increase	$3,558 33

The earnings of the Grand Trunk Railway for the week ending August 29, 1863, were:

Passengers	$31,625 96
Freight and live stock	41,178 15
Mails and sundries	2,800 00
Total	$75,604 11
Corresponding week, 1862	60,080 47
Increase	$15,523 04

The earnings of the Chicago and Alton Railroad for the 1st week of September, 1863, were:

Passengers	$22,977 80
Freight	26,260 03
Sundries	1,074 84
Total	$50,311 67
Same week last year	29,373 78
Increase	$20,937 89

The earnings of the Galena and Chicago Union Railroad for the 1st week of Sept., 1863, were:

Freight	$45,934 83
Passengers	13,029 38
Mails	1,300 00
Total	$60,264 21
Same week, 1862	44,130 10
Increase	$16,134 11

The earnings of the Chicago and Northwestern Railway for the 1st week in September, 1863, were

	$32,966 35
Do., 1862	18,000 23
Increase	$14,966 12

The earnings of the St. Louis, Alton and Terre Haute Railroad for the 1st week in Sept., 1863, were

	$29,446 00
Same week, 1862	20,276 00
Increase	$9,170 00

The earnings of the Milwaukee and Prairie du Chien Railroad for the 1st week in Sept. have been

	$29,093 49
Same week, 1862	27,321 65
Increase	$1,771 84

The earnings of the Michigan Southern Railroad for the 1st week of Sept., 1863, were

	$64,988 46
Do., 1862	54,387 21
Increase	$10,601 25

The earnings of the Chicago and Rock Island Railroad for the 1st week of September, 1863, were

	$53,637 00
Do., 1862	35,211 00
Increase	$18,426 00

The earnings of the Cleveland and Toledo Railroad for the 1st week of September, 1863, were

	$24,413 00
Same week, 1862	20,538 00
Increase	$3,885 00

The earnings of the Michigan Central Railroad for the 1st week of Sept., 1863, were

	$60,503 00
Same period, 1862	54,512 00
Increase	$5,991 00

American Railroad Journal.

Saturday, September 19, 1863.

Stock Exchange and Money Market.

The commerce of this port continues to exhibit great activity, and we notice that at Boston, Philadelphia and Baltimore, there is a similar movement. The Government in these four great Atlantic cities, collected during the month of August past, between eight and nine millions of duties in gold, largely in excess of the calculations of the most hopeful of its friends. From the official tables prepared at the Custom House we perceive the imports of foreign goods during the month of August at this port, amounted in the aggregate to $14,924,252, against $14,212,140 in the same month in the previous year, showing an increase of $712,112. The foreign exports during the same period, of domestic products were $10,666,959, against $13,046,389 in the same month of the previous year. The amount of specie exported during the month of August in

1862 was	$3,713,532
1863 "	3,465,261

By this it will appear, that our exportation is less by $2,978,892 in August 1863, than the same period in the year 1862.

From these Custom House tables we also learn the character and value of the general commerce of the port for the last eight months, that is to say from 1st of January to 31st of August. The imports of foreign goods were:

In 1862	$119,484,000
In 1863	121,239,000

The exports of domestic produce during the same period were:

1862.	$86,101,000
1863.	$113,759,000

thus showing a very favorable increase in the shipments of our domestic products.

The exports of specie have accordingly lessened in amount very considerably. During the same period in 1862, the amounts of specie exported from New York was $40,758,000, in 1863 they were but $29,367,000; a decrease in amount of $11,391,000. So that the general result of the eight months business appears to be, that our ex-

ports from this city were $27,658,000 more than during the same period in 1862, and that our exports of specie were $11,391,000 less. Certainly nothing can be more decidedly favorable than this statement at this time.

We also perceive from these Custom House returns, the fact that the amount of cash duties in gold paid into the treasury in this port for the month of August, was $6,332,334, against $4,762,581 for the same month in 1862.

The deliveries of gold at this port from California during the past eight months have been $8,694,951, against $15,964,675, during the same period in 1862, showing a falling off of almost one half. This difference is readily explainable in the fact, that the operations of the rebel privateers have made the transmission of gold in American ships very hazardous. Our Secretary of the Navy with five hundred ships at his command has been totally unable to capture these destroyers of our commerce. In consequence therefore of this difficulty our California treasure has mostly gone in English ships to England. The result, however, is the same to us financially, for such large shippers as Wells, Fargo & Co., have been able to draw bills against their gold sent to England, instead of selling it in the uneasy and unsteady market of New York. So that practically as long as the American merchants, bankers and Express companies control the gold of California, it is no matter where they realize the proceeds.

On a further survey of the condition of the Money Market for the last week, we are more and more convinced, that the opinions we promulgated in the face of the panic, were founded on correct estimates. One of the chief causes of the fright was the appearance of the Secretary of the Treasury's offer for a loan of fifty millions. It now turns out that the banks had in their vaults at the time, seventeen millions of greenbacks, and now that they have actually paid two instalments into the sub-treasury, they have it is asserted even a larger sum on hand than ever, viz., twenty-one millions, thus showing that in the course of business the money paid out by the Government, flows back again into the vaults of the banks with unerring certainty. For the last few days the return of confidence in railway securities has been marked. Instead of the earnings of the roads having fallen off, the Erie, Central and Hudson show a large increase in the earnings so far, in this month of September. The natural increase of business with the natural increase of the population, and the constant opening in the West of new centres of consumption and distribution are enough of themselves to assure prosperity to our railway system.

Gold at the first intimation of a doubt about Charleston, and the fearful announcement of the dreadful news that Mr. Chevalier had written *a pamphlet* in favor of recognition, went up a few per cent, and relapsed somewhat. We should like to know under whose direction this telegraph news from Cape Race is manufactured for the New York market. Reuter's telegrams on the other side are notoriously and disgracefully altered to favor the rebel cause. If this operator prepares the news for the Cape Race telegraph, we can understand how the most trifling *on dits* are *galvanically batterised* into alarming rumors for the benefit of the bears of this city. This Mr. Chevalier is an erratic Frenchman, with a good deal of misdirected talent. He was one of the great supporters of the crack-brained St. Simon, who established a society in Paris years ago to regenerate the world, and committed all sorts of follies. He was succeeded by a person who called himself the Pere Enfantin, and his teachings became so dangerous to the Government, that they silenced the school and scholars, Michael Chevalier among the rest. The dispersed then betook themselves to some other employments to raise the wind, and some of the cleverest have drifted into the Imperial service, where they got better paid for their work, than when walking in procession in the harlequin uniform of the St. Simonians. Chevalier has written on the question of the recent production of gold, and like some other philosophers is very fearful that property is to be greatly affected by the surplus of the mines now pouring into the commercial transactions of the world by hundreds of millions a year. We imagine that neither property, nor trade, nor any pursuit of life will be much damaged by an increase of the general wealth of nations. If it will take more gold to buy an article than it did fifty years ago, there will be more gold to do it with, and more people having the article to sell, and the gold to give for it.

But this story about Chevalier's pamphlet which did its work for a few hours, even on people who did not even know who he was, has collapsed after the facts about him and his brochure were made known, and now after another recovery of prices and confidence, we have a semi-official letter from Washington, positively assuring the public, that all is friendly and favorable to us at the Court of the Tuilleries. It has been said pretty openly that these panics and movements in Wall street work especial advantages to certain parties in the friendship of the Secretary of the Treasury. Certain it is, the information Mr. Chase can give them, would enable them to make large fortunes at any time, but it is not conceivable that Mr. Chase should abuse his high trusts in this way. His career as a financier has given him a dazzling reputation. His great ability is acknowledged, and his friends are enthusiastic, but not even these would give them their support as they have done, if he was supposed to favor the interests of any clique in Wall street. Nothing brings down a public man so quickly as the belief in his pecuniary unscrupulousness.

The better impression as to our foreign affairs prevailing on Thursday last, (for we now count by days, as great events fill up our weeks) was, that France would not at present recognize the Confederates; that if she did, it would amount to nothing, unless it was followed up by an active alliance; that it was not certain that Maximilian would accept the throne without guarantees which no one will give; that the Vienna Press boldly denounces the whole scheme, and that a war in Europe is not so certainly postponed as was expected.

So all the rams which are building for the rebels in England are not likely to depart on their mission of destruction, although now claimed as private property by a French Banker, *our Government having formally notified the British Government, that the unchecked departure of these vessels will be considered by us as good cause of war.*

This position may wake up Lord Palmerston to "a realizing sense" of the consequences of his policy in trying indirectly to destroy the Union by virtue of the laws of England administered by Baron Pollock.

Our readers will find the quotations and sales of stock for the last week, in their appropriate places, and with their unfailing accuracy.

The following quotations of sales of Railway and other securities are in addition to those given elsewhere in our columns:—

New York.—Marietta and Cincinnati 2d pref., 40; Illinois Central cancelled bonds scrip, 105; Little Miami, 129; Chicago and North Western 1st mort., extended 91; Cincinnati, Hamilton and Dayton, 125; New Jersey R. R., 160; Bhffalo, New York and Erie 1st mort., 108; Warran R. R., 110; Second Avenue R. R., 88; Ohio and Miss. certificates, 30; Miss. and Mo., 31½; do., L. G. bonds, 58; Quicksilver, 64¾. By auction—Cayuga and Susquehanna R. R., 114½@115; Del., Lack. and Western, 180½@185½; Warren R. R., 113; Great Western, Ills., R. R., 65½; do., 1st mort., 1865, 102½; Second Avenue R. R., 81; do., bonds, 103½; Toledo, Logansport and Burlington 1st mort., 79¾; Stonington R. R., 117¾; Manhattan Gas Light Stock, 260@262; do., scrip, 225@226; Metropolitan Gas Light stock, 134½; N. Y. and New Haven R. R., bonds, 1866, 107½; Scioto and Hocking Valley R. R. 1st mort., 1881, 2; Coney Island R. R., 72.

Philadelphia.—Camden and Atlantic, 12; do., pref., 22; do., 2d mort., 68½; Camden and Amboy mort., 108½; North Penn. chattle scrip, 85; do., mort., scrip, 89; West Chester 7s, 105; do., 8s, 80; Philadelphia and Reading 6s, 1843–'80, 110; Phila., Wil. and Balt. 6s, 135; Allegheny Co. 6s, 83; do., coupon off, 80¼; Huntington and Broad Top, 21; do., 2d mort., 85; 13th and 15th streets, 33; 17th and 19th streets, 12½; Wyoming Canal bonds, 97. The latest quotations are: City 6s int. off, 102@102½; do., new, do., 108@108¼; State 5s, 100@100¼; Reading, 57⅞@58; do., 6s, 1843–'80, 109; do., 1870, 107½; do., 1886, 115@117; Camden and Amboy, 173@175; Pennsylvania R. R. div. off, 65¼@65½; do., 1st mort., 111½; do., 2d mort., 108½@108¾; Little Schuylkill R. R., 47@47½; Morris Canal, 70; do., pref., 135½; Susquehanna Canal, 14¼@14½; do., 6s, 62@62½; Sch. Nav., 12@12¼; do., pref., 23¾@24; do., 6s, 1882, 83; Union Canal bonds, 23@25; Delaware Div. Canal, 41@41½; do., bonds, 103; Elmira and Williamsport, 35; do., pref., 53½; do., 7s, 1873, 108@109; Beaver Meadow, 73½@74; Harrisburg, 65; Long Island R. R., 42; do., bonds, 102; Lehigh Coal and Navigation, 59; do., scrip, 44½; North Pennsylvania, 18½@18¾; do., 6s, 95½@96; do., 10s, 120; Philadelphia and Erie, 26@26½; do., 6s, 104¾@105; Minehill, 60¼@62; Catawissa, 7@8; do., pref., 22½@23; Lehigh Valley, 78; do., bonds, 106@108; Frankfort and Southwark (horse,) 56; Second and Third, 80½; Race and Vine, 11; West Philadelphia, 67½; Spruce and Pine, 14⅞@15; Green and Coates, 44@45; Chestnut and Walnut, 59; Arch, 25¼; Thirteenth and Fifteenth, 32⅛@33⅛; Seventeenth and Nineteenth, 12½12¾; Girard College, 25½; Tenth and Eleventh, 42; Philadelphia, Germantown and Norristown, 60.

Boston.—Vermont Central 50c.; do., 1st mort,

82; do., 2d mort., 22¾@22; Northern (Ogdensburg) 1st mort., 100; do., 2d mort., 27¼@26½; Old Colony and Fall River 6s, 1869, 105; Connecticut and Passumpsic Rivers R. R. 6s, 101; Cheshire 6s, 1881, 102¾@102; Rutland and Burlington 1st mort., 74@73; do., 2d mort., 17½; Vermont and Mass. 6s, 104; Worcester and Nashua, 80; South Shore, 15@16; do., 6s, 98@99½; Taunton Branch R. R., 126; Nashua and Lowell, 123½; Fitchburg and Worcester, 105; Boston and Lowell, 105⅜; Portland, Saco and Portsmouth, 108@109½; Massachusetts 6s, 1872–'75–'76, 115; Maine 6s, 1871, 104¼; do., 1883, 108¼; Rhode Island 6s, 1883, 109¼; Chicago 7s, 110½; Chelsea, horse, 52¾; Acton Mining Co., 4⅞; Albany and Boston, 13¼; Bay State, 10¾; Black River, 60c.; Bedford, 60c.; Canada, 1⅜; Chaudere, 50c.; Columbian, 7; Copper Falls, 21½; Dana, 2⅛; Dacotah, 7; Dunham, 75c.; Dudley, 4; Great Western, 4¼; Hancock, 13½; Hamilton, 2; Hanover, 1¾; Huron, 24; Manhattan, 6; Madison, 4; Mesnard, 13¼; North Western, 7; North Cliff, 5½; Norwich, 4; Ottawa, 28c.; Pontiac, 8¾; Phœnix, 27; Petherick, 27; South Side, 5¾; Star, 7⅛; St. Mary's, 6½; Superior, 8¼; Toltec, 3¾; West Minnesota, 1¾; Wickam, 87½c.; Winthrop, 4½.

Baltimore.—N. W. Va. 1st mort., 103½; do., 3d mort., 25¼@26½; City Passenger R. R., 18¾; Western Maryland bonds, 81½; Central Ohio 4th mort., 40. Albany and Susquehanna Railroad.

The celebration of the opening of thirty-five miles of this road took place on the 15th inst. From an extended description of the ceremonies in the *Albany Evening Journal* we take the following interesting particulars. Two hundred citizens of that place, together with the Mayor and Common Council, and many distinguished guests, were present and took part in the ceremony. The President of the Company, E. P. Prentice, Esq., stated the following facts in the course of a fete which was given in honor of the occasion at the Central Bridge, the present terminus. The enterprise was inaugurated in 1851, and has for years struggled with the greatest difficulties, until by a grant of the credit of the State, it was enabled to obtain means enough to ensure its completion. From Central Bridge, the line proceeds across the Schoharie Creek, follows the Cobleskill valley to the summit near East Worcester, and down the Scheneves to the Susquehanna at a place called Maryland. It then follows the valley of this stream to Nineveh, whence by the way of Osborn Hollow, it reaches Binghamton. There of course it connects with the Erie and the broad gauge lines west, so that the cars of the Albany and Susquehanna road will be seen at Cincinnati and Chicago, and those of the two cities come to Albany. The part of the road between Central Bridge and Oneonta, 45 miles, is all under contract, and will be in use in the course of another year. The remaining part between Oneonta and Binghamton, 60 miles, is now all re-surveyed for subletting, and will be completed in two years.

The part now opened to travel is described in the *Journal* as follows: From and down Church street to the south boundary of the city and along the river to the valley of the Normanskill, thence to the slopes of the Heilderburgh Mountains, near Knowersville, seventeen miles from the city; from thence up the valley of the Bozakill to its head, into the valley of the Normanskill a second time, and through the County of Schenectady ten or twelve miles; it then enters the valley of the Schoharie Creek opposite Esperance, and following the Southern slope, with a descending grade, reaches the creek at the Central bridge, thirty-five miles from the city. It is a broad gauge road, and executed under the direction of C. W. Wentz, Engineer. The heavy grades are all encountered going westward, some of them seventy feet in a mile, thus giving a great advantage to the descending freight which will be principally the heavy products of the country. The contractors, who have faithfully performed their engagements, are Messrs. Brady, Phelan, Blake, Keenholtz, Rosebrook and Smalley, and the Superintendent is M. Delbett, who is well spoken of. The elegant passenger cars in use were built by the well known carriage-makers, Gilbert & Co., of Troy; the locomotives, by Richard Norris & Son, of Philadelphia.

The Governor and Comptroller were present, E. C. Delevan, its first President, Judge Gould, of Troy, and others, who made appropriate addresses, and it was confidently asserted that it would be one of the most useful and best paying roads in the country. The coal bearing region will now be open to Albany, from whence it can be cheaply transported to this city, in active competition with longer and more expensive routes.

We regret that it was not in our power to accept the invitation of the President, and to have been present at this interesting ceremony.

Dr. Willing's Notes of Exploration.

We have in to-day's Journal a third extract from the notes of Dr. Willing's account of the basin of Colorado with its inexhaustible mines of gold and silver. It is very evident that he has treated his subject in the most careful and scientific manner, and all that has been said even in the language of exaggeration of this region, falls short of the reality. No one can foretell the consequences to this country of the opportune discoveries of these mineral resources.

Milwaukee and St. Paul's Railway Co.

We give elsewhere the statement of this company, as taken from its recent publication, together with the articles of association under which the company was organized.

Chicago Tunnel.

We learn that the contract for constructing a tunnel under Lake Michigan, for the the purpose of supplying the City of Chicago with pure and wholesome water, the proposals for which were advertised in the Journal, has been awarded to Messrs. Dull and Gowan, Harrisburg Pa., for the sum of $315,139, with a small addition for extras.

[From the U. S. R. R. and Mining Register]

The Gold and Silver Mines of the Great Colorado Basin.

EXTRACTS FROM THE JOURNAL OF DR. WILLING'S EXPLORATIONS.

Continued from page 874.

(c) *Valley of the San Juan—Navajos Country—North East Arizona.*

The new Territory of Arizona is bounded on the east by the Territory of New Mexico, on the south by the Province of Sonora, in the *domain* of old Mexico, on the north by the Territories of Utah and Nevada, and on the west by the southeastern part of the State of California. It is included within the following parallels and boundaries, viz: Commencing at a point where the 109° of longitude intersects the 37th° of north latitude; thence south on said degree of longitude to the boundary line between the United States and old Mexico; thence west on said boundary line to the boundary line of southeastern California; thence north on said boundary line to the 37° of north latitude; thence east on said parallel of north latitude to the place of beginning. It contains 126,141 396-1000 square miles, or 78,730,621 acres. Three-fifths of this territory is composed of mountains—one-fifth of sandy sterile *deserts*, and one-fifth of arable lands.

About one tenth of the mountain ranges are good pastoral lands, and one-sixth is well timbered. The area of the arable lands comprises the valleys of the Colorado, the Moquis, Rio Virgen, Rio Verde,* Colorado *Chiquita*, (or Flax river,) *Chelle* river, Rio San Juan, Chaca and the Cosninas rivers.

The *mesas* or table lands are generally without vegetation or water. These deserts vary in size from a few miles to upwards of seventy miles wide and a hundred and fifty in length, and are composed of sand and silicious stones, loose in many places and subject to be blown or shifted during heavy gales of wind. In some places the deserts are hard and compact, forming a mirror-like appearance, the reflections of which gives rise to the mirage so often witnessed in this country. * * * * * *

The metalliferous region may be summed up as containing near nineteen thousand square miles, or twelve millions one hundred and sixty thousand acres. This large area embraces every description of metals known to exist among the primitive rocks, and in such abundance as to be beyond comprehension. Before enlarging on the resources of this country, a few general remarks upon mines and mining may have a salutary effect, and which will not be out of place in this connection.

The country is not wanting in a class of persons who decry mining enterprises, and pronounce all attempts for developing its mineral resources, as schemes rather of expectation than of reasonable prospect of accumulating wealth, from this source. This class of persons, though wealthy, never invest their means (or their money rather) in mines.

* * * * * * *

There is another class of persons who, though equally unbelieving in the real value of mines, and also ignorant of their character, are ever ready to plunge into such speculations where the project is sufficient to make a bubble, and may be inflated into consequence. This class of men have little to lose, are always reckless in representations, and are ever ready to avail themselves of such arts as are necessary to carry out their visionary schemes. There is a third class of persons who look at matters in a different light. They are satisfied, from practical experience and scientific attainments that there do exist valuable mines, and who see, that for years to come, the increased wealth of the nation is to be drawn from this great storehouse, and which now is concealed in the bowels of the earth and hidden from the world, except where the eye of science reveals and brings it to light. These invest their money

* Rio Verde is the stream between the Colorado Chiquita and the Chelle rivers.

content with the fair gains of the business. The course pursued by the second class has been so notorious as to give dubious character to mining enterprises and to invest them with a suspicious appearance. * * * *

The great desire of these extracts from the Notes of Exploration is to present the value of the mines within the Colorado basin, by giving them a prominency to which they are entitled, and also to show that it is to the interest of the public to foster and entertain all mineral enterprises, when undertaken in a proper spirit and upon a reliable basis. The time is not far distant when mining for the more valuable metallics will form one of the great industrial pursuits of the country. Every blow of the pick, and each gunpowder blast in the metallic region, will add their farthings to the common wealth of the nation, for every ounce of gold, silver, copper, lead or iron thus taken from the earth, is a real addition to its resources.

It is not to be expected that one quarter of the veins containing gold and silver will turn out inexhaustible mines. If, indeed, one in ten of the thousands of veins which permeate the hills of the great mountain chains turns out well, then the mines within the basin of the Colorado must become the greatest in the world, the principal deposits being contained within the limits of the new territory under consideration.

Mining operations in this country have been conducted upon a very loose scale, and but little, if any, artistic appliances have been used in gathering the metals; this is owing to the fact that present and immediate gains have been sought for. Sudden accumulation of wealth, has heretofore, and even at this date, usurped the place of reason and common sense. In all mining operations fanciful speculations of becoming suddenly rich, by the least expenditure of either *brains* or money, overrides all other considerations, and thus disappointment ever will be attendant upon a large majority of those who seek after the yellow or white metals; some are fortunate in obtaining large amounts, but a majority of miners are doomed to disappointment. All experience proves that the wealth of a mine is variable—some zones are rich while others are comparatively poor. This is also observable in surface or *drift* diggings, hence one reason for the uncertainty of mining.

These remarks are made, not for the purpose of discouraging persons who desire to engage in mining, but to illustrate, with some degree of reasonableness, the difficulties attendant upon mining operations by persons ignorant of the position which the metallics are made to occupy. And, indeed, it is an excellent idea so far as it relates to the mineral resources of the country in question; for the description which follows, showing the immense deposits of gold and silver, could not fail to create an exaggerated excitement. No country *perhaps* on the globe presents such an interesting field for exploration as that of Arizona. Besides the immense deposits of gold and silver with which it abounds, remains of ancient towns and cities, once the residence of the Aztec race and the home of the Montezumas, are still in existence, and represent what was formerly a densely populated country.

The traditionary and historical account of Arizona is elaborate and full of interest; containing many startling facts relating to the mineral deposits and the existence of precious stones, a detailed account of which would be too lengthy to incorporate in this series of articles.†

These ruins, especially upon the left bank of the Rio San Juan or *Nabajos*, are about fifty miles below the junction of the Chaca with the San Juan, represent the former existence of immense structures, which, in the art of building in the present day, for massiveness, cannot be excelled. The houses seems to have been quite lofty, and having several stories, the rooms of which were of immense proportions. Broken pottery, carved and otherwise embellished according to the rude trade of the aborigines, is found everywhere among the rubbish of the ruins.

In the kingdom of *Totonteac*, spoken of by Friar Marco de Nica, were the cities of the San Juan or *Cia-qui-visi*. The Indians who lived there, about the time Sevadra explored the upper of the Rio Grande del Norte, were called *Lontos*, but since the year 1539 no trace of them is to be found other than remains of their numerous towns. Aside from the superstitious views entertained by the present generation of Indians now living in Arizona, their traditions are worthy of notice, as they comprehend many details having a direct bearing upon the original state of the country.

The number of towns comprising the kingdom of Totonteac, the ruins of which are still to be seen, and many of which are yet occupied by Indians, are as follows:

1. Chen-e-hue-vitz.
2. Hu-il-pa-ich.
3. Mat-hat-e-vatch.
4. Pa-haul-chitz.
5. Mac-ha-ves.
6. Ya-ba-pais.
7. Cos-ni-nos.
8. Timbi-bachi.
9. Cia-*qui-visi*.
10. Chem-p-quis.
11. Jumb-qui.
12. Na-ba-joa.

The Apacheria name for the Colorado is Hah-weal Asientic. The name for the San Juan river is Hah-weal-ha-mook. The name for the Chelle river is Hah-qua-si-il-la.

The number of Indians who inhabit the country within the limits of these enumerated remains of ancient towns and cities, are composed of the following tribes—1859:

Navajos—Males over 21	2,300
Pueblo—Females over 18	2,100
Tim-bi-bac-chi—Old men and women	1,850
—Boys and girls	3,750
Total	10,000

APACHERIA OF THE INNER BASIN OF THE COLORADO.

Moquinos—all ages—Pueblo Moquis	6,720
Pinal Lenos and Coyoteros—near Moquis	3,000
Lontos, Cosninos and Jumbqui	6,000
Chem-p-quis, Cu-chans and Mac-ha-ves all ages	8,500
Total	34,220

The outer basin of the Colorado has numerous tribes of Indians which will be spoken of hereafter. The list given above comprises all the tribes within the basin of the Colorado, marked by the canons of Chelle, Tim-bi-bac-chi, the Moquis and the Black Canon. The area of this beautiful park is about 22,500 square miles. The principal sterile wastes within this limit are the celebrated painted desert and the mesas or plains which surround the three sulphur pyramids near the volcano *Jum-bui-ric-vari*, described hereafter.

The area of the arable portion of the San Juan valley is about nine hundred square miles, or 576,000 acres; this includes the main branches and the valley of the Chaca river. The soil is a rich alluvium, and like other valleys or bottom lands within the mountain range, is clothed with a luxuriant growth of nutritious grasses with which wild oats, barley, wheat and flax are intermixed. The mesas or table lands, near the settlements and ruins of the ancient towns, are generally fertile, but need irrigating because of their elevated and arid position. Near the ruins and all the present settled pueblos are tanks and cisterns affording a bountiful supply of water.

The bottom lands of the San Juan and a few of its affluents have small groves of walnut, ash and oak. The mesquite or bean tree is very abundant, and peach trees are scattered throughout the whole district. Natural vineyards are to be found everywhere upon the lowest bottom lands bearing luscious fruit. The peaches are seedlings, and of course many varieties occur. The tree flourishes well, and is found almost everywhere upon the water courses forming the valleys. The fruit ripens as early as August and as late as November.

The valley of the San Juan is the chief grazing ground of the Nabajoa Indians, and also upon its rich soil they produce wheat, maize, pumpkins, squashes, melons, beans, onions, &c., in greatest plenty. The mode of cultivating is very primitive, and the yield is surprising. Irrigation is seldom resorted to; the growing season of the year is accompanied with frequent mists which sufficiently moistens the soil to keep up a vigorous growth of the plant. These mists are from drifting snows, and sometimes clouds which form below the Alpine heights, afford showers of rain of short duration, and which are invariably accompanied with severe lightning and thunder, and heavy gales of wind that sweep across the mesas or table lands, driving before it clouds of sand and gravel in such immense bulk as to render traveling extremely uncomfortable and dangerous. When this occurs, the trails leading across the mesas are obliterated, and the plateau has the appearance of a desert waste over which no travel has been performed.

The painted desert which intervenes between the Moquis valley and the San Juan is a high mesas or plain, slightly rolling, with here and there rising uplands or hills having abrupt and steeps sides. These hills are composed of carboniferous sandstones, and in many instances show upon the escarpments distinct water-worn surfaces, as if they were beat against by the waves of an inland sea, which evidently at some ancient period existed. The painted desert is composed of striæ of ocrous beds of various colors, *tufa* and shales. Its area is about 2,400 square miles.

The occurrence of precious stones in this part of Arizona is quite frequent, and it is highly probable that the working of such mines may be made profitable. The ruby, or *tellessie of Haiiy*, is found throughout the whole plain, but as yet no perfect *corunduns*. Obsidian, cornelian and jasper are seen in fragmentary angular pieces all over its surface, and silicious stones of various colors are thickly strewn upon it.

This large area of land, situate between the Moquis and San Juan, is without the least vegetation and entirely destitute of water, excepting where arms or points of the desert make out towards a stream. Its boundary extends as far southwest as the San Francisco mountain, and owing to the light nature of its composition every wind that has any force shifts the debris from one place to another, thus covering up the trail that may be made to-day on the morrow—one reason for the non-appearance of established routes of communication.

The principal gold region of the San Juan valley comprises the mountainous district which flank it on the east and north. These are the southern slopes of the Sierra San Juan range, and the western slopes of the Sierra Luncha.

The ravines descend very rapidly, and are numerous, narrow and deep; they convey but little water, and, indeed, where they contain the richest deposits of freed or drift gold, they are dry, and sometimes even without springs. To make such locations available for mining purposes canals will have to be constructed to convey the water to them. This is an easy task, inasmuch as the flowing streams generally are not farther off than fifteen or twenty miles, where a sufficient fall can be had to bring it to the tops of the hills binding the ravines containing the gold, silver and other metals.

The amount of gold freed from the veinstones by the natural process of the former denudating period within this district, and which now lies in the beds of these ravines, must be immense and beyond any reasonable calculation. The number of these metalliferous ravines cannot fall short of three thousand, having an average length of one and a quarter miles. These are crossed and recrossed by numerous veinstones, and in no instance is there a ravine that does not have more than one vein of ore passing across it or running parallel with it. If, indeed, it is assumed there is but one vein, the value of this district is immense. * * *

It is a safe calculation that each of these ravines will average four veins of gold bearing quartz. Their acclivities 2,000 feet, and in thickness one

† See Ives, Ward, Wilson and Bourne, Humbolt, Marco de Nica, Sevadra and others.

yard, the entire district of the *San Juan*, calculating on this scale, contains in drift or freed gold the enormous sum of one hundred and eight billions of dollars. It is highly probable the San Juan is the locality from whence was taken the *balls* and plates, and other pieces of silver obtained by the Spaniards, if the traditions of the Indians are to be believed. They assert that the pieces or plates obtained by the Spaniards in the earlier settlements of the country by that people, and especially the missions of the Gila valley, were deposited or hid there by the natives, and that the real place where such large masses were first found was within the mountains flanking the San Juan valley. The historical account of the finding such masses is appended to this series of articles for the purpose of illustrating the great wealth of this region in the finer metallics, and their occurrence in greater quantities than found in other sections within our own territory.

After the conquest of Cu-li-a-can by the Spaniards, Don Antonio de Mendoca, Vice Royal and Captain General for the Emperor's Majesty in New Mexico, which included all of Arizona, commissioned Friar Marco de Nica, a Franciscan Monk, to make an exploration of the country, where it was supposed the Montezumas obtained their wealth in gold, silver and precious stones. He departed upon his journey on the 7th day of March (Friday) 1539, and after a long and tedious journey he arrived at the city of Ci-bo-la, the present cite of old Zuni. Here he relates: "*I was shown turquoises and other stones of value; vessels of gold and silver, and other ornaments made of the same material, of which the people had great store, and all of the vessels which the people were served with were made thereof; besides they had flat pieces of gold wherewith they scraped the sweat from their bodies, and the doorways were ornamented also with gold and turquoises—the riches whereof were too wonderful to calculate.*" He also describes seeing white men and women with blue eyes and chestnut colored hair, very handsomely formed, and the women very "beautiful to look upon." They dressed in cotton robes and fabrics of wool. * * *

Ascertaining that all this great wealth was obtained from what he termed the Pin-ta-dos, who were a strong nation residing in large cities farther north, called by the people of Cibola, Te-ton-te-ac, he was deterred from visiting it on account of the hostile demonstrations made against some of his party sent forward to reconnoitre the route, when he returned with all possible speed to the province of Cu-li-a-can and finally to Compostella.

Francisco Vasques de Ceronado upon the report of Friar Nica immediately set on foot an expedition thoroughly armed for the occasion, to the country of Cibola, with the intention of making conquest. Upon his approach the natives sent off all their women, children and valuables to the mountain fastnesses, and for some time held out against the Spaniards, but finally were overcome, their defenses scaled, and they themselves reduced to abject slavery for the time, being tortured and otherwise maltreated because they would not impart to their conquerors the locality containing their hidden treasures. Coronado was deterred from going to the kingdom of Tetonteac on account of the stories told him of a great hot lake, which he feared as being near the dominions of his *satanic majesty*.

The entire spoils of this expedition amounted to about a pint of emeralds, which he found scattered on the floor of one of the casas, and a few pieces of nugget gold in its native state; disappointed and discouraged he returned to the province from whence he set out. The natives, rid of their tormentors, then commenced the building of the present town of Zuni. In 1581, Friar Augustin Ruyz, a Franciscan Monk, made a "*voyage*" to New Mexico, and travelled 250 leagues north, into a country called the province of De-los-Liguas or *Tiguex*. The soldiers who accompanied him returned, after one of the priests had been killed by the Indians.

Soon after this occurrence an expedition was fitted out by a citizen named Antonio de Espejo, who left San Bartola 10th November 1582. Ascending the valley of Rio del Norte to the Jemez-pueblo, he was told by the people that a five days' journey would bring him where the precious metals were in abundance, and that fifteen days' travel would take him to a large lake with great houses and towns upon its borders. On their march, as directed they noted the good soil and abundance of precious metals. Arriving in the province of Tiguas,* which contained sixteen towns, they found plenty of food and rich metals of gold, silver and copper,† but the inhabitants had fled. In two days travel from the Liquez he found another province containing 11 towns and 40,000 inhabitants.‡ Pursuing a northerly course fourteen leagues, he found another province called Cu-ma-nes, with five towns of which Cia-qui-visi, (now in ruins,) with a round casa, was the largest, having 20,000 inhabitants; it had five market places and houses plastered and painted in various colors. The people presented him with curious wrought mantles, and showed metals of gold and silver in great abundance and mountains near by where were the mines.

(The ruins of this town are upon the Rio San Juan, and which the Navajoas assert was the former residence of the Montezumas.) He visited other towns, among them were Acoma, Ameies, Timbibachi and Cosninas. Captain Espejo found most all of the people wearing bracelets of gold and other ornaments made from the same metal.

Whilst at *Cia-qui-vi-si* he took, with his own hands from the mines, large amounts of the precious metals, and relates that they were on the mountains and easy to get at. He visited many of their farms, and adds that upon the streams grew many vines bearing excellent grapes. Roses were abundant; the people were industrious and happy; their houses were built of stone, very strong and of massive magnificent proportions; the people were comely in their persons, and among them were many beautiful women. After obtaining as much of the metals as he could with convenience transport, and the status of the natives having suddenly changed from a friendly to a very hostile nature, he was compelled to retrace his steps and seek safety among his own people. This continued hostility on the part of the Indians caused other expeditions that were on foot to be abandoned by the Spaniards, who contented themselves with the section of country bordering upon the Gila, the San Pedro, and the Rio Sonora, Cinola, Zacaticas and Durango.

All research was given up to discover the source from which Montezuma obtained his great wealth, until the year 1795, when Friar Pedro Font penetrated as far as the Sulphur Pyramids, more particularly described in the present series, in another place. Here he came across a town of the Apacheria tribe, called Tim-bi-bac-chi, or Tam-jabs, the present race of Jumb-qui-Nabajoa.

True to their general character, the Indians gave no encouragement to the explorers, and placed every obstacle in their way to deter them from penetrating the country, and Father Font only succeeded in skirting the western edge of the painted desert, and reaching as high up the valley of the San Juan to the ruins of the Circular Casa and Cia-qui-visi.

Since Friar Font's expedition, the Baron Humbolt, Ward, Wilson, Bourne and Ives have traversed a considerable portion of the inner basin of the Colorado, but in such a hurried manner that little satisfaction is given as to the true character of the country. It is true that all of them speak of this region as containing great metallic wealth, consisting chiefly of gold and silver and far surpassing the mines of the older Mexican States. The statements made by these explorers, of the ruins of ancient towns the discovery of pottery ware and other relics, are evidences of the once populous state of the country, and which corroborates the statements of the Spanish explorers, who enumerate over one hundred towns being in existence as late as the year 1540, containing more than 300,000 souls.

It is highly probable, and indeed there is sufficient data to establish the fact, which will be more particularly alluded to in another place, but which in this connection it is proper to mention, that within the past three centuries this country, as well as the entire Pacific coast, from Mazatlan to Puget's Sound, has been subjected to frequent earthquakes, and that these causes may have swallowed up or engulphed whole communities in the space of an hour, and the famous city, whether fabulous or not, of Qui-vi-ra might have thus been destroyed, without a vestige having been left behind to mark the spot where once it stood and flourished.

The tradition, although confused, and in many instances of a decided superstitious character in its relations, nevertheless, coincides with the present condition of the country; and so far as its metallic wealth is concerned is *established beyond a doubt*. Surrounded as this region is by rich metalliferous districts—on the east by the mines of New Mexico, on the northeast by the mine's of *Pike's Peak*, on the north by the great silver mountains, on the northwest by the immense deposits of gold and silver ore in Nevada, and the recent discoveries in the southern part of Utah, the rich mines of gold, silver and cinnabar of the San Bernandino mountains, on the west and on the south by the mines recently occupied on the lower Colorado, the Mogollyon mountains, the Sierra Mimbres, the San Pedro and Sonorean mines, and being contained within the centre of that great volcanic region of the chief range of Cordilleras, and to which the exposure of the metallics is owing, it becomes the nucleus from which radiate all the metallic veins which ramify and form the dikes now giving rise to all the mining operations throughout the entire mountain ranges North and South.

The climate of the San Juan is delightful and very healthy. There are no settlements of white people within its boundaries. The Indians have large herds and flocks and lead a pastoral life, cultivating but a small part of the soil. The valleys and bottom lands afford pasturage all the year round. The country is well watered by numerous rivers, with sufficient volume of water for all economical purposes. All other resources are in abundance with which to supply the wants of man.

* Ruins of the Chelle and Chaca Nabajoa—35th parallel north latitude.

†Litteral translation.

‡ This was the Moquis, for he says it bordered on the province of Cibola of Zuni.

Valuation of Beverly.

The valuation of real estate in Beverly for the year 1863, is $1,643,150; personal estate, $1,418,-850. Number of polls, 1,596. The amount assessed is $36,354 64. The ratio of taxation for town tax is $6 80, and for State and county taxes $4 per $1,000.

Valuation of Lowell.

Total valuation of Lowell for the year 1863, $20,761,517, an increase of $575,140 over last year. Valuation of real estate of residents, $5,-027,052; personal estate of do., $3,094,350; total $8,121,402. Real estate of corporations, $8,038,-487; personal estate of do., $3,462,011; total $11,500,498. Real estate of non-residents, $1,121,-075; personal estate of do., $18,542; total $1,-139,617. Number of polls this year is 5,732 against 6,526 last year—a decrease of 794. The rate of taxation this year is $11.20 on the $1,000, against $10.20 last year.

Valuation of Cambridge.

The amount of real estate assessed is valued at $15,320,300; personal estate $7,228,900; total valuation of the city for the year, $22,549,200. There are 5775 polls. The rate of taxation is eleven dollars on the $1000, and the poll tax is $2.

Valuation of Charlestown.

The value of real estate in Charlestown, is $12,907,300; and of personal property, $5,570,000. The amount to be raised by taxation the present year is $189,378 45, the rate of taxation being $9 80 per $1,000, the number of polls, 6,064, and the number of school children, 5,228.

ENGINEER'S FIELD BOOK,
By C. S. CROSS, Civil Engineer.

THIS work is designed as a pocket companion, and embraces, in the most compact form, all the necessary tables for prosecuting railroad surveys. It is subdivided as follows:—
1st. The method of staking out railroad curves and keeping field notes.
2d. Railroad curve tables for expeditiously determining the points at which commences the curving.
3d. Application of the Prismoidal formula in determining the quantities of excavation and embankment of canals and railroads from transverse sections.
4th. Excavation and embankment tables for expeditiously determining the cubic yards from mean area.
It is a plain, clear and most valuable book for practical Railroad Engineers. Sent, free by mail, upon receipt of the price. For sale at this office. Price $1.

MUNN & CO'S
PATENT OFFICE.
ESTABLISHED 1842.

DURING the past twenty years, Messrs. MUNN & Co., in connection with the publication of the WEEKLY ILLUSTRATED SCIENTIFIC AMERICAN, (the only paper devoted to the Mechanic Arts in the country,) have acted as Attorneys for procuring letters patent in the United States and all foreign countries.

They would state that they have acted, during this period, as agents for more than

TWENTY THOUSAND INVENTORS;

In fact, they have become identified with the whole brotherhood of inventors and patentees, at home and abroad. Thousands of inventors for whom they have taken patents have addressed to them most flattering testimonials; and the wealth that has inured to the inventors whose patents were secured through their office, and afterward illustrated in the SCIENTIFIC AMERICAN, would amount to many millions of dollars!

Messrs. MUNN & Co. are prepared to attend to patent business of all kinds, in the quickest time and on the most liberal terms.

For further information, send for a pamphlet which contains the Patent Laws of the United States, and much other valuable information of importance to inventors and all others who own patent property. Also pamphlets of information furnished regarding the Patent Laws of all foreign countries.

For further particulars address

MUNN & CO.,

RENSSELAER IRON COMPANY,
TROY, N. Y.,

OFFER RAILS of their own manufacture deliverable as may be desired by purchasers.

OLD RAILS

received in exchange for new, or for re-manufacturing.

JOHN A. GRISWOLD, Agent,
TROY, N. Y.

New York Agency:
BUSSING, CROCKER & CO.,
33 Cliff st.

RAILROAD IRON.

2,000 TONS BEST QUALITY WELSH RAILS, 50 and 56 lbs. per yard.
For sale by

PERKINS & LIVINGSTON,
54 Exchange Place.

RAILROAD IRON.

THE undersigned, agents for the manufacturers, are prepared to make CONTRACTS FOR RAILS delivered free on board at ports in England, or exship at ports in the United States

M. K. JESUP & COMP'Y,
44 Exchange Place.
New York, 1st June, 1859.

RAILROAD IRON.

ENGLISH and AMERICAN Railroad Iron for delivery in New York and other markets in the United States and England. Contracts negotiated by

E. A. & S. W. HOPKINS,
70 Beaver st., New York.

SUBSTITUTE FOR
CAR DUCK.

Kingman's Car Covering.

THIS is a heavy Canvass imbedded in a coat of Elastic Mastic or Paste which is applied directly to the boarding of the top of the car, and then thoroughly painted with three or four coats of paint, thus making a covering VERY MUCH LIKE CAR DUCK, but at this time at half the cost. It is now successfully used by many Railroads and Car Builders. Directions and particulars sent when requested. This Mastic and Canvass for sale by

WILLIAMS & PAGE,
67 Water street,
March 1863. **Boston.**

HAMILTON E. TOWLE,
CIVIL AND MECHANICAL ENGINEER
OFFICE, { **156 BROADWAY,** NEAR MAIDEN LANE, NEW YORK.

SMITH'S
Railroad Air Light Comp'y.

THIS COMPANY OWNS THE EXCLUSIVE RIGHT of **SMITH'S AIR LIGHT FOR RAILROADS,** and is prepared to sell to Roads the right to use the same. We have arrangements perfected for furnishing Lamps and Burners at about the same price charged for the Oil and Kerosene Lamps by other Manufacturers.

That Railroad Managers may know the value of this LIGHT, we annex letters from the Hon. CHAUNCEY VIBBARD, the General Superintendent of the New York Central Railroad, and also from the Master Mechanics of the same road, showing its comparative cost with that of Oil Lights:

NEW YORK CENTRAL RAILROAD,
GENERAL SUPERINTENDENT'S OFFICE,
ALBANY, November 15, 1862.

TO THE MANAGERS OF RAILROADS:

Gentlemen,—This Company has adopted and is furnishing all their locomotives with the "SMITH AIR HEAD LIGHT."

They do this both on account of economy and the very superior light it affords.

We regard it as vastly superior to any light that has ever been produced, and commend it to the consideration of railroad managers.

Very respectfully, etc.,
C. VIBBARD, Gen'l Sup't.

NEW YORK CENTRAL RAILROAD,
MASTER MECHANIC'S OFFICE,
WEST ALBANY, January 28, 1863.

DR. GEORGE HAND SMITH:

Dear Sir,—Below please find the cost of locomotive lamps burning oil on this division.

Supposing oil cost $1 57 per gallon.
Cost per hour, 5 cents.
Cost of wicks chimneys, per year, $4 80.
Estimate cost of leakage, gumming and overflow, one-fourth of the consumption.
In the year 1861, when the lamps were all oil burners, the cost of repairs were $10 20 per year.
You will please add the overflow to the actual cost per hour, which would make 6.25 per hour.

Your most ob't servant,
EDWARD H. JONES,
Master Mechanic, Eastern Division.

300 days, 5 hours each day, 1,500 hours, 6¼c. per hour	$93 75
Repairs of lamps for one year	10 20
Wicks and chimneys	4 80
	$108 75

NEW YORK CENTRAL RAILROAD,
MASTER MECHANIC'S OFFICE,
ROCHESTER, Feb. 2, 1863.

DR. GEORGE HAND SMITH:

Dear Sir,—In answer to your inquiries in reference to your Air Light, I would state that we have upon this division of the road 28 of your lights on our first class passenger and freight engines. I find the light consumes about five feet of common gas per hour, which, at the price of gas at this place, $2.½ per thousand, makes the cost of light for each engine 1¼ cents per hour.

Renewing my often expressed opinion that your light, for its reliability, its economy and superiority, far exceeds any light heretofore used on engines,

I remain, very truly, yours, etc.,
DAVID UPTON,
Master Mechanic, Western Division.

300 days, 5 hours each day, 1,500 hours, 1¼c. per hour	$18 75
One-sixth waste of gas	3 12
Repairs of lamps for one year	5 00
	$26 87

Further information may be obtained at the office of the Company, 31 Nassau st., or by addressing

CHAS. W. WELSH,
Secretary.

Ship Canal between the St. Lawrence and the Hudson.

We again recur to this important subject from a profound conviction of the absolute necessity of enlarged water communication with the great West, and with the hope of concentrating public opinion so fixedly upon the project, as to bring about its construction at an early a day as possible. We are constantly told by our statisticians of the enormous amount of Western production, by our statesmen of what is due to the States in the upper basin of the Mississippi, and by political economists of the value to our commerce of its immense products. All admit that staple articles being bulky, can be more cheaply moved on canals subject to tolls, than on railways without tolls, and we know that the Erie Canal is equal in its capacity of transportation to fifteen railways like the Central. For heavy articles, water communication is decidedly the best, and for those whose value bears no proportion to their size, it is the only practicable one. How much cheaper however is that water communication which Nature sometimes gives us, when she offers large lakes and rivers connected with each other, and how remarkably have the United States been blessed with these natural aids to commerce and industry. No artificial navigation can ever supersede the natural channels of the Mississippi, the Missouri, the Hudson and the other many navigable streams which flow into the Gulf and the numerous bays and sounds of the Atlantic.

We will not again discuss the project of enlarging the Erie Canal, so vigorously pressed by able enthusiasts, those who never know when to leave off when they once begin a thing. This Canal is large enough for the business which legitimately belongs to it. Any artificial or temporary pressure upon its capacity is not a reason for extravagant enlargement on a permanent scale. It is now for the first time producing a large revenue over and above the interest of its cost, and the expense of repairs, and if let alone, will be equal to all the expenses of the State Government and its various needs, and relieve us from taxation at an early period; an advantage which no other State in the Union possesses. Here we have a great and beneficial work, the profits of which go to the people, very unlike a railway where the gains go into the pockets of a private company. Now any attempt to change its character so as to pass large ships or steamers, instead of barges, which carry two hundred tons, is to incur a debt of many millions, and put off to some future generation the benefit of a surplus revenue; it is to delay and hinder navigation, and to give a preference to associated capital, such as must combine to produce and manage steam fleets, over the individual enterprise which has now full equality in the character, propelling power, and value of the craft used upon its waters. Worse than this, the scheme ignores that great inland sea, Lake Ontario, and its natural outlet, the St. Lawrence, and proposes to destroy their trade, and sacrifice their ports, for this would be the effect of the proposed ship canal, if it were as practicable of construction and certain in its consequences as its advocates maintain.

Now the position we assume is this, that if the time has come for a ship canal from the lakes, let us construct one which will embrace all the advantages of the other, and many more; which will benefit the commerce of all the lakes, give us the trade of Lower Canada, that of the Ottawa river, the proposed Ottawa Canal, and can be constructed without any serious difficulty, and at a very moderate expense. This is the route of which one hundred and fifty miles are already constructed on a magnificent scale; we mean Lake Champlain, large enough to contain fleets and the scene of very famous actions. This route is almost practicable now, since at one end, it connects with the St. Lawrence by the Chambly Canal, and at the other by the Champlain Canal with the Hudson river at tide water. This idea is not a new one. It has possessed for many years the minds of the most sagacious Americans, and it has also been adopted by some of the most eminent and far-seeing merchants of Canada.

Since our last issue, our prepossession in favor of this great project have been confirmed by an attentive examination of a memoir on the subject, from the pen of that distinguished Canadian merchant John Young, Esq., of Montreal, the President of its Board of Trade, and beyond all question one of the ablest men in the Province. He it was who despatched the first propeller that ever passed up from the St. Lawrence through the Welland Canal to Chicago, and procured the present deep water navigation through Lake St. Peters, by which steamers of 2,000 tons ascend from the Ocean to the docks at Montreal. He it is to whom the project of the hydraulic locks and increased water power for the accommodation of the commerce of that city owes its life, and he it is whose opinions we now proceed to quote in favor of the ship canal from the St. Lawrence to the Hudson, as being of the highest authority, and one which the merchants of the city of New York may pause, in the whirl of their activity, to listen to and adopt. The memoir or rather pamphlet of Mr. Young is composed of a series of letters which appeared in the Montreal Gazette, and is entitled "Rival routes from the West to the Ocean, and Docks at Montreal." The large and liberal views expressed in these letters do him honor, since Mr. Young is a man who never refuses to accept a sound general principle, even if it does not confer any particular benefit on himself. Thus as early as 1846, he saw, that though the connection between the St. Lawrence and the Hudson might seem to result to the particular ad-

vantage of New York, yet that Canada would gain by it its full share, and the gain of both countries was of course the gain of each. This was two years before the St. Lawrence canals were opened for general traffic. In the year 1847 he, in company with an eminent engineer, ascertained by personal examination, that a ship canal between Caughnawaga and St. John's was entirely practicable, and this we presume is the route he would still prefer to the existing one of the Chambly. The route was actually surveyed and an able report made thereon by J. B. Mills, Esq. In 1848 an able memorial was addressed to the Provincial Government in behalf of the Montreal Board of Trade, stating the advantage of such a canal, its cheapness, its opening up the lumber districts, that it would connect the upper lakes with the State and city of New York, and increase the resources of the St. Lawrence canals.

In 1849, a bill was carried through parliament, authorizing a company to construct the work, and it was highly approved and fully endorsed at the convention held in Saratoga, of which we have spoken in our former articles on this subject. It appears that the project was kept alive from year to year in various forms, with an opposition from time to time as to the route, and the principle of its being in the hands of a private company. The details in Mr. Young's pamphlet in respect to this part of the subject are very minute and highly interesting. Various lines were run, some as late as 1855 and 1856, by eminent American and British engineers, among the former of whom were John B. Jarvis, and N. B. Swift. It appears that the cost was estimated at about two millions of dollars, and that the canal could be "fed" either from the Beauharnois Canal, or Lake Champlain. Nevertheless it appears that after all the surveys had been made, apparently in one direction, in consequence of a report of the Committee on Public Works, by Messrs. Lemieux and Killaly to the Canadian Parliament, the final preference was given to "a line *following the Chambly Canal*, and then crossing to Lake St. Louis, as that which would combine and afford in the greatest degree all the advantages contemplated by this improvement. The absolute necessity for this connecting link in the chain of this immense inland navigation through this province, and the United States becomes more and more apparent every year." Although the Chambly Canal was a circuitous navigation as compared with the Caughnawaga route, Mr. Young assented to the substitution proposed, and this has probably given the Chambly route the prominence it at present holds in public opinion, as being a part of the proposed work, and that work in part done. The calculations made by Mr. Young are conclusive as to the cheapness of the route for the western shippers, and we regret we have not space to republish them. He even satisfactorily showed by figures, that if the Champlain Canal was not widened by the State of New York, yet that which he advocated between the St. Lawrence and St. John's would open a vast trade between this State, the New England States and the Canadas, which now exists but partially, and the difference of expense of freighting would still be largely in favor of the lake and St. Lawrence route. We have no doubt of this, and it is precisely the advantage we wish our Northwestern producing States to have. As tolls and freights stood at the time alluded to, Mr. Young calculated, even if the Champlain Canal was not enlarged, that the cost of taking property from Chicago to Troy was, *via* Buffalo, (per mills per mile,) $4.85; *via* Oswego, $4.01; *via* Caughnawaga, $3.90. Mr. McAlpine our former well-known State engineer made similar calculations with similar results. We give them as they are not only curious, but scarcely to be found anywhere in print. He declared that with the Welland and Caughnawaga Canals built, even with the whole Erie Canal enlarged, the cost of transport from Chicago to New York, *via* Buffalo, Oswego, Montreal and Caughnawaga, would be in favor of the Montreal route. His figures are as follows:

First.—From Chicago to New York by the way of the Lake to Buffalo, the Erie Canal, and the Hudson River to New York.

	By sailing vessels.	By steam vessels.
From Chicago to Buffalo, 914 miles lake navigation, at 2 and 3½ mills	$1.83	$3.20
From Buffalo to West Troy, 353 miles canal navigation, at 8 mills	2.82	2.82
From West Troy to New York, 151 miles river navigation at 3 and 5 mills	0.45	0.76
Transferring cargo at Buffalo	0.20	0.20
1418 miles	$5.30	$6.98

Second.—From Chicago to New York by the way of the lakes and Welland Canal to Oswego, and thence by the Oswego and Erie Canals and the Hudson River to New York.

	By sailing vessels.	By steam vessels.
From Chicago to Oswego, 1057 miles lake navigation, 2 and 3½ mills	$2.11	$3.70
Additional expense on the Welland Canal, 28 miles, 3 mills	0.8	0.8
From Oswego to West Troy, 202 miles canal navigation, 8 mills	1.62	1.62
From West Troy to New York, 151 miles river navigation, 3 and 5 mills	0.45	0.76
Transferring cargo at Oswego	0.20	0.20
1410 miles	$4.46	$6.36

Third.—From Chicago to New York by the way of the lakes, the Welland, St. Lawrence, Caughnawaga and Champlain Canals and the Hudson River to New York.

	By sail vessels.	By steam vessels.
From Chicago to New York, 1632 miles, at 2 and 3½ mills	$3.26	$5.71
Additional expenses on the Welland, St. Lawrence, Caughnawaga and Champlain Canals, 167 miles, 3 mills	0.50	0.50
1632 miles	$3.76	$6.21

Fourth.—From Chicago to Montreal by way of the lakes and River St. Lawrence and the Welland and St. Lawrence Canals.

	By sail vessels.	By steam vessels.
From Chicago to Montreal, 1278 miles, at 2 and 3½ mills	$2.56	$4.47
Additional expense in the St. Lawrence and Welland Canals, 75 miles, at 3 mills	0.22	0.22
1278 miles	$2.78	$4.69

Here we have a difference in favor of *Montreal, including the Lachine Canal*, of $2.52 and $2.29 per ton by sail and steam vessels over Buffalo to New York by Chicago, $1.68 and $1.67 per ton over Oswego. Again, the fact is established by these figures that the route by the St. Lawrence, Caughnawaga, and Champlain Canals to New York from Chicago, has a superiority over Buffalo of $1.56 and $0.79 per ton by sailing and steam vessels, and over Oswego of $0.76 and $0.15. Supposing the Champlain Canal, from Whitehall to the Hudson, remains *of the same size as now*, the cost of taking the property on to the Hudson at Troy, would be as follows:—

Chicago to Whitehall—1415 miles at 2 mills.	$2.83
Additional expenses on Welland, St. Lawrence and Caughnawaga Canals—96 miles at 3 mills	0.29
Transferring cargo at Whitehall	0.20
Cost of transport on present Champlain Canal to West Troy—72 miles at 8 mills	0.58
	$3.90

So that the actual cost of each route as far as Troy, would stand as follows, without the Whitehall Canal enlarged:

Via Buffalo.	*Via* Oswego.	*Via* Caughnawaga.
$4.85	$4.01	$3.90

This last table, however, was the deduction made by Mr. Young himself from the previous estimates.

We have now said enough we believe to show, that the enlightened men and merchants of Canada have long seen the benefit to themselves and to the people of the Northern States, of a free navigation, (or what is such in comparison with the Erie Canal route,) by the lakes and short canal connections between them. We notice with pleasure that in a broad and liberal spirit they are willing to give the city of New York the advantage of being the great terminus, content with such share of the trade as Montreal would naturally and meritoriously receive. We have shown that rivalship and jealousy have had no part in the breasts of the enlightened men who have there fostered the design up to the present moment. We have shown in previous articles that the pressure of Western production can be most easily and economically relieved, not by making a ship canal of four hundred miles, but by enlarging two to the proper size only about seventy five miles, not by paying tolls on a long line, but a short one; in fact, by an unshackled navigation, so to speak, against one subject to heavy charges, accidents and modifications of regulations, which can never affect lake navigation.

We therefore desire to press this subject on the attention of the public men of the Canadas, and those of the States immediately affected by the project, as one eminently worthy of their attention and support. We trust that the merchants of Montreal after so long an advocacy of the measure, will not abandon it, and we also trust that the leading merchants of New York, and the Executive of the State will follow it up until it is adopted. The reports on the subject made last winter to the Legislature, (accompanied by the admirable maps from the State Engineer's office,) have given vitality and practicability to the idea, and it would be a scandalous abandonment of our duty to ourselves and to our brethren of the West, if we did not move at once to make this grand improvement, which would cost but half a year's revenue of the Erie Canal, and give the State of New York the advantage of the whole trade of the West and of the Canadas, leaving the

Erie Canal unharmed, and still performing its full share of the work of our internal navigation and commerce.

Boston and Maine Railroad.

The earnings and expenses of this road for the years ending May 31, 1862 and 1863, have been as follows:

Earnings:	1862.	1863.
From passengers	$457,483 16	$571,653 75
" freights	249,033 79	298,151 52
" rents	12,331 77	20,870 72
" mails	10,623 06	10,465 87
" int., and dividends	2,955 86	21,338 18
" P. S. & P. R. R. surplus	.....	23,500 00
	$732,427 64	$945,980 04
Expenses, viz:

From which deduct two dividends of four per cent. each	$332,456 00	
U. S. tax on same	10,066 05	
Charles River Draw accident	20,249 09	
	362,771 14	
Leaving a surplus of	$87,530 82	

Compared with 1862, the gross earnings of 1863 show an increase of $213,552 40; with an increase in expenses of only $53,656 94—making the increase in net earnings $159,895 46. The report says:

The receipts from the manufacturing companies on our line have been materially reduced during the past year, but the deficit has been more than made good by the transportation of troops, and military business arising from the war.

The steamer Daniel Webster, in which this company has had an interest since 1853, has been sold during the past year. The boat needed extensive repairs, and it was no longer deemed advisable to retain a water interest in competition with our connecting railroads east of Portland. The boat itself has always paid a fair rate of dividends, but it has nevertheless been a source of expense through the necessity of running extra trains, and often at irregular hours. The past year has been an exception. There is included in the earnings of the road the sum of $10,356 38; of which $7,500 is from the earnings of the boat, under the contract with the United States Government, alluded to in the last report; and the balance, $2,856 38, is from the proceeds of sale after deducting $3,652 31, the amount at which the boat stood charged on the books of the company. A still further dividend from the proceeds of sale is expected.

In the appendix will be found a statement of the receipts and expenditures of the Portland, Saco, and Portsmouth Railroad, taken from the report of the directors of that road, for the year ending May 31, 1863. The contract between that road and this company and the Eastern Railroad stipulates, as is well known that in consideration of a guarantee on the part of the two latter, that the former shall always receive three per cent. semi-annually on its capital stock, the surplus earnings, if any, shall be equally divided between the two latter. Owing to military business, and diminished competition from outside boats, and other more general causes, which have acted upon all the railroad interests of the country, the earnings of the Portland, Saco, and Portsmouth Railroad have been unusually large during the past year.

It will be seen that the Boston and Maine and the Eastern Railroads have each received from the surplus earnings of that year the sum of $23,500. The amount appears large, but it should be remembered that in some years they have received nothing: and it is not probable that the Boston and Maine and the Eastern roads, during the whole period of the arrangement, have been more than compensated for services of various kinds rendered to the Portland, Saco and Portsmouth Railroad, and for the use of their passenger and merchandise cars in the transaction of joint business.

The usual amount of work has been done during the past year to maintain bridges, track, rolling stock, and buildings in complete repair.

The new brick engine house at South Berwick Junction has been completed, and a woodshed 300 feet long, which was much needed, has been erected. Other work mentioned in the last report has been completed, and paid for in the past year.

Three locomotives have been entirely rebuilt, and three, not so well adapted to the wants of the road, disposed of. Two of these were taken by the United States, and also twelve merchandise cars. The places of these latter have been supplied by new cars, constructed in our own shops. The valuation of equipment in the construction account shows a decrease of about $12,000. This is caused by striking from the list the three engines which were sold, and by putting a lower valuation upon the cars than in the previous year. The locomotive equipment is really in a more efficient condition; and the present summer's work has more than made good any deficiency in the car department.

The construction account is but slightly varied from last year. The land account shows a decrease of twenty dollars from the sale of a small lot not required for the use of the road. There is also a reduced valuation of equipment, as before explained.

The undivided earnings account is increased by the surplus of this year, $87,530 82, and amounts to $715,443 07. A reference to the trial balance shows that this is properly a balance of account. The capital stock and liabilities are less than the cost of the road, equipment, and other assets, by this amount. The value of this surplus depends upon the value of those assets.

The sad accident at Charles River draw is too fresh in the minds of the public and our stockholders to require any lengthened detail. Additional legislative provisions regulating the use of railroad drawbridges have been obtained, which, it is believed, will obviate the danger of accident in future. The pecuniary cost of this accident to your corporation has been heavy. The returns of this report show that up to May 31, 1862, $20,249 09 had been paid out. Since that date there has been paid a further sum of $26,230 64, making the total amount to this time, $46,479 73. This includes the settlement of five cases of death by decision of court, and one case by agreement. Forty-one claims for personal injury, of varying amounts, have been adjusted. The balance is for expenses of labor, machinery, &c.

There are still some claims unadjusted, where the parties claiming are not thought to have received any real injury. Your directors do not anticipate that the above amount will be materially increased.

On the 22d of December, 1862, an order was passed by the Board of Aldermen of the City of Boston authorizing our company to use steam power to and from their station house in Haymarket Square. Thus was revoked the order requiring the use of horse-power, under which we had been operating since the 1st of January, 1854. We congratulate our stockholders and the public on the permission thus granted, which enables us to conduct our business more satisfactorily as regards safety, expedition, and cleanliness. Certain conditions as to erection and maintenance of expensive gates, and the employ of flagmen were imposed that go far to neutralize the gain in point of economy which this arrangement might be expected to produce. With such conditions we have cheerfully complied, believing the considerations of safety and diminished obstruction of the public ways, of paramount importance.

Our relations with connecting railroad companies remain much the same as at the date of the last annual report. A lease of the Cocheco Railroad, for a term of not less than fifty years, has been offered to your directors during the past year. It was proposed that an annual rent of $33,500 for the road and equipment, should be paid by the Boston and Maine Railroad. The proposed rent seemed large, in view of the receipts of that road in past years, and the offer was not acceded to. The bondholders of the Cochecho Company then organized under a new charter as the Dover and Winnipiseogee Railroad Company, and obtained permission from the last Legislature of New Hampshire to extend their railroad from Dover to Portsmouth, proposing to make a connection at the latter place with the Eastern Railroad. At the time of writing this report it is understood some surveys of the route have been made, but no location determined upon.

The equipment of the road consists of 33 locomotives, 53 passenger cars, 19 baggage cars, and 484 cars for freight, etc. Miles run by passenger trains, 434,669; by freight trains, 176,805; by wood and gravel trains, 8,138; by extra trains, 11,228—total, 630,840. Number of passengers carried 1,845,812; do., carried one mile, 27,878,135. Tons of merchandize carried, 239,718; do., caried one mile, 6,433,817.

Condensed Balance Sheet.

Construction	$3,880,349 64

☞ The fourth and fifth installments of 20 per cent. on the new stock of the Central Railroad Company of New Jersey have been called, payable to the Treasurer on or before the 15th of October next.

The Ottawa Canal.

We find the following important letter in the Montreal *Gazette*, in relation to the Ottawa Canal. This project is intended to shorten the distance between Chicago and Montreal, about five hundred miles. It is therefore more necessary than ever, that there should be a ship canal navigation, between Montreal and New York by the way of Lake Champlain, and the Champlain and Chamblee Canals. We quote from the *Gazette* the following paragraphs:

It would appear from the following letter in answer to a memorial to the Duke of Newcastle, which had been agreed to by the Town Council of Sheffield, in favor of a ship canal from Lake Huron to the Ottawa, that the Imperial Government view the work with favor, and will give it all the aid they can:—

DOWNING STREET, 31st July, 1863.

SIR:—I am directed by the Duke of Newcastle to acknowledge the receipt of your letter of the 9th inst., enclosing a memorial addressed to His Grace by the Town Council of the borough of Sheffield, respecting the advantages that would attend a navigable line of communication between Lake Huron and the Ottawa. I am to request that you will state to the council that Her Majesty's Government would see with much satisfaction the completion of such a great and important undertaking as is described in this memorial, and that so far as it can be legitimately given, the Imperial Government will accord the project its support. No appeal, however, as the council correctly infer in their memorial, could be made to Parliament for pecuniary assistance.

I am, sir, your obedient servant,

T. ELLIOTT.

Double Track between New York and Washington.

On the 1st of October, the Philadelphia, Wilmington and Baltimore Company will be running a double track to Newport, 35 miles from Philadelphia, and the work toward Baltimore will be continued until it is successfully completed. It is expected that by the meeting of Congress there will be a double track between Baltimore and Washington. A double track is in course of construction between Philadelphia and New York. The junction of railroads in Philadelphia will be in a condition by the 1st of December to run the cars through from Washington to Jersey City without change of cars.

Representatives of railroad interests say that the construction of the bridge over the Susquehanna River is progressing vigorously. The entire length will be 3,500 feet. Thirteen stone piers are cased in iron, some of which are sunk in water 43 feet deep. The great pier will be sunk this month, and the others finished before January. Both abutments will be completed before next Spring, and probably all the pile foundations this Autumn. The bridge will cost about a million of dollars.

Iron Railroad Car.

The latest railroad novelty is a new iron car on the New York Central Railroad, which has been manufactured for the American Express Company. It is of the largest size, built almost entirely of iron, and provided with all desirable conveniences for locking up valuable packages. The inside is lined with wood, and the top is covered with wood, all else is iron, the body of the car being of heavy plates riveted together. The Company consider it burglar proof, and any attempt to destroy it by fire would prove a failure.

Central Pacific Railroad.

The Chief Engineer of the Central Pacific Railroad has just issued his first annual report. Contracts for the construction of the first fifty miles from Sacramento have been let, and work is going on bravely. Materials for the great bridge over the American have arrived, the foundation of two piers completed, and the coffer-dam around the centre pier driven. Six miles, comprising the fifth to the tenth sections, are ready for the track. The next six miles will be ready this month. Six thousand tons of iron have been purchased, and will be delivered at the rate of five hundred tons a month. Much of it is already on the way from the east, as are also the turn-tables for the first fifty miles, six locomotives, six passenger cars, two baggage cars, and twenty-five freight cars. The reasons given why the Central Pacific Railroad Company did not use the Sacramento Valley Railroad, for its length, are, briefly, that it is built of English iron, is mortgaged for $430,000, and is eight miles longer than the new road, which must be built of American iron, and be able to give the United States first mortgages. The estimated cost of the first division of fifty miles, complete, is $3,321,496. The second division of fifty miles reaches to within six miles of the summit, and will be put under contract about the 1st of December.

La Crosse, Viroqua and Mineral Point R. R.

Proposals will be received by this company at Chicago, until the 1st of October, for the purchase of $4,000,000 of its first mortgage 7 per cent. coupon bonds, interest payable June 1, and December 1, in New York, and the principal reimbursable on the 1st of December, 1888; the proceeds to be expended in the construction of the road from Mineral Point to La Crosse; said bonds to be issued upon the completion of the road in sections of ten miles each, and to bear date December 1, 1863. The line of the road will be 90 miles in length, and will form the connecting link in the system of railways, between Chicago, *via* the Galena and Chicago Union and the Illinois Central Railway, and the Upper Mississippi and Red River of the North, connecting at La Crosse and Winona with the Southern Minnesota Railways, now in course of construction toward the Missouri River, and with the Winona, St. Paul and Pacific Railway, also in course of construction, and leading to the Red River of the North, and to Lake Superior, being the "Short Line Route" between Chicago and the British Possessions.

Railway Communication with Knoxville.

The Cincinnati *Commercial* says that work on the Military Railroad from Nicholasville, Ky., to Knoxville, Tenn., has been commenced, and will be pushed forward with great rapidity. A thousand men to the mile will soon be employed. Negro laborers have been impressed along the line of the road, every third slave being taken. They will be clothed and paid. Unemployed blacks who have come into the Federal lines in the Southern States are being forwarded here to labor on the road. They will be paid one-third wages, the balance being reserved to aid in providing them with a home in a foreign country, when the war is over. The city of Louisville has subscribed $600,000 to the Lebanon Branch Railroad, and throughout the State the heartiest co-operation will be given to this great enterprise.

Premiums to Civil Engineers.

The following is the list of premiums recently granted by the Council of the Institute of Civil Engineers, England, for essays:

1. A Telford Medal and a Telford Premium, in books, to John Brunton M. Inst. C. E., for his "Description of the Line and Works of the Scinde Railway." 2. To James Robert Mosse, M. Inst. C. E., for his Paper on "American Timber Bridges." 3. To Zerah Colburn, for his Paper on "American Iron Bridges." 4. To Harrison Hayter, M. Inst. C. E., for his Paper on "The Charring Cross Bridge." 5. A Telford Premium, in books, to Wm. Michael Peniston, M. Inst. C. E., for his Paper on "Public Works in Pernambuco, in the Empire of Brazil." 6. To William Henry Preece, Assoc. Inst. C. E., for his Paper on "Railway Telegraphs, and the Application of Electricity to the Signalling and Working of Trains." 7. To Alexander Woodlands Makinson, M. Inst. C. E., for his Paper "On some of the Internal Disturbing Forces of Locomotive Engines." 8. To Daniel Miller, for his Paper on "Structures in the Sea, without Coffer Dams, with a Description of the New Albert Harbor at Greenock." 9. To Robt. Crawford, Assoc. Inst. C. E., for his Paper on "The Railway System of Germany." 10. To William Cudworth, M. Inst. C. E., for his Paper on "The Hownes Gill Viaduct, on the Stockton and Darlington Railway." 11. To James Grant Fraser, M. Inst. C. E., for his Paper "Description of the Lydgate and of the Buckhorn Weston Railway Tunnels." 12. A Watt Medal and the Manby Premium, in books, to John Fernie, Assoc. Inst. C. E., for his Paper "On the Manufacture of Duplicate Machines and Engines."

Eastern Railroad.

The following is a comparative statement of the receipts and expenditures of this road for the years ending November 30, 1861 and 1862:

Receipts:	1861.	1862.
From passengers	$431,161 69	$472,229 38
" freight	100,196 85	125,838 56
" parcel post and car	14,488 48	13,499 90
" extra baggage	269 10	399 95
" U. S. Mail	9,724 00	9,824 00
" miscellaneous	4,596 68	1,185 66
" property accounts	8,507 20	8,429 90
	$565,939 00	$631,307 35
Expenditures, viz:		
Maintenance of way	$67,299 87	$64,360 42
Locomotive power	52,713 27	44,937 99
Coal	30,417 58	41,618 58
Wood	6,879 12	1,985 16
Machine shop	2,142 86	2,243 79
Train expenses	65,611 67	65,025 46
Office establishment	25,182 26	24,407 97
Station expenses	47,897 56	48,623 83
Mail expenses	1,312 20	1,299 64
Insurance and taxes	9,081 11	10,070 04
Rent of Grand Junction road	11,000 00	11,000 00
Int. paid and accrued	107,139 23	102,197 16
	$426,676 73	$417,770 04
Net income	$139,262 27	$213,537 31

The receipts of 1862 show an increase over those of 1861, of $65,368 35, with a decrease in expenditures of $3,964 62—making the net increase $69,332 97, The increase of net income is $74,275 04. The report says:

In the early part of the present financial year we continued to feel the depression arising from the first outbreak of civil war; but afterwards, and especially in the last half year, our business has been in a high degree prosperous. Our last Report to the Stockholders, in consequence of the change in the time of holding the Annual Meeting, it will be remembered, embraced the period of six months only, to wit, ending November 30, 1861, during which period our total receipts were $282,447 92. During the coresponding six months em-

braced in the present Report, ending November 30, 1862, our total receipts have been $378,247 12, or an increase of $95,799 29, while our expenses have been increased but $16,664 81, showing a net gain of $70,185 30 for the half year.

The road-bed, superstructure, buildings, and equipment, have been kept up and improved in condition. Five hundred and thirty tons of new rails, and 1,167 rails, equal to about 188 tons of welded rails, and 27,290 sleepers have been laid down during the year. Also, 1,278 welded rails, equal to 205 tons, and 5,797 sleepers have been put down on the Essex Road. Work has been done with the gravel train, to the amount of $3,377 16, ballasting, filling, and grading track. One engine has been rebuilt, eight or ten others have undergone thorough and complete repairs, and the remainder have been kept in good condition, with such ocasional repairs as seemed to be necessary. Six passenger cars have been rebuilt, two have been purchased; two new baggage cars, six new short box cars, and six new cattle cars have been built, and eight box cars have been rebuilt; and others have received more or less of repairs, and many passenger and freight cars have been repainted.

The Beverly bridge, of the length of eleven hundred feet, which had been standing since the road was first opened for travel, has been rebuilt new, at a cost of $15,883 05. This important work has been successfully carried through, without accident or the interruption of trains. Other bridges, both in the road-bed and overhead, have received all needful repairs.

At the Wenham station the Company have never had a depot, a room of a private dwelling-house having been used for that purpose. The increasing business of that station has long required better accommodations, and we have now erected there a convenient station house, including dwelling for depot master, and freight-house. A new freight-house has also been built at Newburyport, and the freight-house at Gloucester improved and repaired.

On the 21st of June last our depot on Causeway street, Boston, was destroyed by fire. This was a temporary structure, and was insured to nearly its value, so that our direct loss was not great. By the prompt, liberal, and continued courtesy of the Boston and Lowell Railroad Company in permitting our use of their excellent depot accommodations, both we and the traveling public have been saved from many of the inconveniences which otherwise would have resulted from such a disaster. In determining upon a plan for a new edifice we felt that the interests of the Corporation and the demands of our great and increasing passenger traffic required that it should be a permanent structure, of ample proportions, with so much of ornament as should be consistent, at the same time, with both good taste and rigid economy. The rear part, or car shed, 330 feet long, already substantially completed, has its walls of brick, and its roof of iron and slate, and is therefore fire-proof. The front part, or head-house, besides spacious corridors, and waiting-rooms, for the convenience of passengers, will also contain proper and convenient rooms for all the principal offices, and also for the ordinary meetings of the Corporation thus saving, in rent, an amount equal to the interest on a considerable portion of the cost of the building,

The system of package tickets, at reduced rates, the introduction of which, to a limited degree, was referred to in our last Report, has been considerably extended, and with increasing success, especially to points affected by horse-railroad competition. Between Lynn and Boston, in particular, during the six months from June 1 to December 1, 1862, while the package tickets have been in use, we carried (besides the season ticket travel, which has been but little varied) 120,006 passengers, for which we received $22,793 70, while, for the corresponding period of the preceding year, the number was but 37,986, receiving therefor $11,395 80, showing an increase of 82,020, or more than 200 per cent. in numbers, and 160 per cent in receipts.

It will be rembered that, by a vote of the Stockholders, at their Annual Meeting in July, 1861, the Directors were authorized to take such measures as they should find necessary to protect the interests of the Corporation in the second mortgage of the Great Falls and Conway Railroad, given to secure the Eastern Railroad in New Hampshire, as guarantors (under an indemnity given by this Corporation in 1854) of the bonds of the Conway Road, to the amount of $100,000. The first mortgage bonds being of the amount, also, of $100,000, with overdue coupons thereon, amounting to ($7,635, less $2,000, since paid) $5,635, became due, January 1, 1862. To prevent the taking possession of the railroad, and a foreclosure, which by the laws of New Hampshire may be perfected in one year, under that first mortgage, it became necessary to assume the purchase of these first mortgage bonds and coupons. This has been done (except one bond of $100) at par, and they are now held by us. There is also a third mortgage on that Railroad to secure bonds, to the amount of $75,000. These last named bonds, with their coupons, with the exception of a very small amount, are also held by us at a cost of $13,188 91; and this third mortgage has been absolutely foreclosed for our benefit, so that the Great Falls and Conway Railroad, with its equipmen, is substantially owned by our Corporation, at a cost of about $218,718 91, made up as follows, to wit:—

1st mort. bonds and coupons, as above,	$105,535 00
Liability on second mortgage bonds,	100,000 00
And cost of third mortgage bonds,	13,183 91
	$218,718 91

Aside from any indirect advantage of that Railroad as tributary to ours, its earnings, when not diverted or withdrawn to other uses, have in general been about sufficient, and in future it is hoped and believed will be more than sufficient to pay the interest on both the first and second mortgages. The length of the road is about 20 miles.

In accordance with the suggestions in our last Report, and with the vote of the Stockholders, at their Annual Meeting in February, 1862, the bonds of the Grand Junction Railroad and Depot Company, amounting to $140,000, guaranteed by this Corporation, were taken up and paid by us at their maturity in March last, and on the 6th day of May, 1862, we made formal entry for possession and foreclosure, under the mortgage of the piece of railroad held as security for that guarantee, to wit, about two miles of track, constituting a portion of our main line of road through Charlestown and Chelsea. These bonds, as well as the Conway bonds, both of which are now held as assets of our Company, have been paid for, partly by sale of our own bonds, and in part by the temporary use of ordinary revenue. The annual instalment of $75,000 of income bonds has been paid from earnings, as usual.

A settlement of our difficulties with the Eastern Railroad in New Hampshire and its Stockholders has been agreed upon, which will be submitted for your action at the Annual Meeting.

Our usual immunity from accidents has not attended us during the last year. On the 17th of September, through an unfortunate misunderstanding in regard to an order for the meeting of trains, a collision occurred at Hamilton, between a regular passenger train and an excursion train, causing serious injury to several passengers, and the death of three faithful employees of the road.

The results of the year's work on the Essex and South Reading Railroads, appear in the tables hereto annexed. The steamer Daniel Webster has been sold, and our portion of the proceeds has been sufficient to replace the original outlay, and leave the sum of $6,514 to the credit of Profit and Loss in final settlement.

The earnings of the Portland, Saco, and Portsmouth Railroad have been largely increased, and we have received, within the year, $5,000, and may reasonably expect further income from that source.

The equipment of the road consists of 27 locomotives, 47 passenger, 18 baggage, 155 box, 78 platform, 17 cattle, 139 coal and gravel, 28 hand, and 12 rail and stone cars; also 7 snow ploughs and trucks.

The construction account, or cost of road and equipment to November 30, 1862, is as follows:

44.2	miles	Main line	$3,317,925 99
3.0	"	Marblehead branch	55,843 05
13.1	"	Gloucester branch	338,879 71
3.8	"	Salisbury branch	79,189 38
8.4	"	Saugus branch	45,468 85
8.1	"	South Reading branch	74,900 44
80.6	"	Cost of Mass. road & br.	$3,912,207 42
16.6	"	in New Hampshire	510,779 41
97.2	"	Total cost of road	$4,422,986 83
		Equipment, valued at	315,165 00
		Total cost of road and equipment	$4,738,151 83
		28,534 shares stock in Mass.	$2,853,400
		4,925 " " N. H.	492,500
			3,345,900 00
		Balance	$1,393,251 83

The receipts of the South Reading Branch were in 1861 $16,756 86; expenses, $18,538 47—loss, $1,781 61. In 1862, the receipts were $14,320 90; expenses, $17,217 33—loss, $2,896 43.

The receipts on the Essex railroad in 1861 were $56,060 35; expenses, $45,872 66—net income, $10,187 69. In 1862 the receipts were $55,423 31; expenses, $40,320 26—net income, $15,103 05.

The receipts on the Portland, Saco and Portsmouth railroad in 1862 were $207,483 75; expenses, $112,983 40—net income, $94,500 35; less dividends, $90,000—surplus $4,500 35.

The number of miles run by engines during the year was: with passenger trains, 301,627; with freight trains, 86,136; with other trains, 64,405—total, 452,168. Miles run in 1861, 432,100, showing an increase of 20,068 miles. Passengers carried in 1862, 1,246,502. in 1861, 1,122,405. Tons of freight carried in 1862, 105,926; in 1861, 80,071.

Conveyances.---Law of Agency.

CONVEYANCE OF REAL ESTATE FOR THE BUILDING OF THE CINCINNATI, WILMINGTON AND ZANESVILLE RAILROAD COMPANY. A PARTY MAY ACT AS AGENT FOR BOTH THE GRANTOR AND THE GRANTEE.

This action was brought in a District Court of Ohio, by one Thomas Iliff against the Cincinnati, Wilmington and Zanesville Railroad Company, to recover damages for an alleged trespass upon, and appropriation of the plaintiff's lands for the construction and use of the defendant's railroad.

It appears that previous to the construction of the road one Carrol, who was agent of the company, solicited of the plaintiff, a conveyance of a certain tract of land upon which interested parties desired the railroad to be built. The plaintiff at first refused, but upon being told that if he would make the conveyance to the company, three of his neighbors, Reed, Crosby and Cherry, would deliver to the company like unconditional releases of rights of way through their respective farms, he consented to do so. He accordingly executed a written conveyance to the company of land in question, and deposited it in the hands of the agent Carrol, with instructions to deliver the same to the company, provided his said neighbors should do the same, but if his neighbors should not execute like conveyances, to redeliver the instrument to himself.

The plaintiff now alleged that his neighbors did not execute like unconditional releases; but entirely different ones. Carrol instead of returning to him the conveyance, delivered the same to the company, who proceeded to enter upon his farm, dig up his land, take down his fences, and otherwise do him great damage.

The point of contest was, whether the release had ever become operative by what in law amounts to an effective delivery. It was claimed by the company that the act of the plaintiff, in handing over the instrument of release to a known agent of the company to procure the right of way for its road, was of itself, and *necessarily* in law, an effective delivery to the company. On the part of the plaintiff it was contended that he did not deliver the paper as a completed instrument of release to Carrol, as the agent of the company, to accept such delivery; but that, at the time he handed the paper over to Carrol, he distinctly constituted him his own agent, or depository to hold the instrument as on *escrow*, until the performance of the condition mentioned; and in case of its non-performance to return it to him; and that such act of handing the paper over to Carrol, was not in law a delivery to the company.

At the trial the judge charged the jury—"that if they found the release of the plaintiff was executed, and delivered by him to Carrol, upon the condition hereinbefore stated, and that the condition had not been performed at the time Carrol delivered the release to the company, the same was obligatory upon the plaintiff, if he knew, or had good reason to believe, at the time he so delivered the release to Carrol, that Carrol was the agent of the company for the purpose of procuring for it the right of way for its railroad through the country; *unless* Carrol was distinctly constituted the plaintiff's agent, as well as the agent of the company, for the purpose of holding and *returning to him* the paper, in case of the non-performance of the condition; and that this could be done, although the plaintiff knew that Carrol was acting as the agent of the company in obtaining such right of way; that it was competent for the plaintiff, by plain and distinct terms, to constitute Carrol his own agent, for the purpose of holding the release, and returning it in case of the non-performance of the condition; and that it made no difference that the company did not know or give its consent to, such agency in behalf of the plaintiff."

The jury rendered a verdict for the plaintiff. The defendant appealed to the Supreme Court of the State, which now affirms the decision of the court below. The following is the opinion of the court upon the main question involved:

BRINKERHOFF, J.—There can be no doubt according to the uniform current of authority, that if in this case, the instrument of release had been as a completed instrument, delivered to Carrol simply as the agent of the company to procure the right of way, although the delivery may have been accompanied with verbal stipulations that the instrument should not *operate* as a release, until and unless certain conditions were first performed, the release would have been operative according to its terms, and the verbal stipulations in respect to its operation after delivery, would have amounted to nothing. And this view of the law of the case upon the state of fact supposed, is not only consistent with the first part of the charge of the court, but is plainly declared by it.

But a delivery of an instrument of release, as a completed and fully executed instrument, to a known agent of the grantee, acting simply in the character of such agent is one thing; and the act of placing such instrument in the hands of the same person—placing it in his hands, not to be by him handed over to the releasee at all events, but to be retained by him, and returned to the releasor in case of the non-performance of a condition named—the paper to be held by him, and, in case of the non-performance of the condition returned, as the agent or depositary of the releasor and his selected custodian of the instrument for that purpose, is certainly, a different thing in point of fact, whatever it may be in point of law. The word "agent" is used by the court below to designate the supposed relation between the plaintiff and Carrol. Perhaps "depositary" or "custodian" would have been a better word; but as his supposed functions are fully defined in the charge, the word employed is of no moment.

It is upon the hypothesis that the jury should find this latter state of fact to be true, that the remainder of the charge of the court below proceeds, and in which it is insisted that error has intervened. And so the question is raised, not whether delivery to a known agent is, in law, a delivery to the principal—for that was in effect, distinctly charged by the court below; but whether Carrol's agency for the company was so incompatible with the relation of agent or depositary of the plaintiff, and his custodian of the paper as to legally incapacitate him for the acceptance of the latter relation. The majority of the court has been unable to see, either in principle or authority, any solid foundation on which the proposition involved in the affirmative of this question can rest.

And first how stands the question on principle? Carrol, for aught that appears in the record, was a man of full age, of sound mind, and under no duress or undue influence. He was under no personal disability to assume any lawful relation open to citizens in general. And if there were no necessary conflict between the two he was as free to accept an agency from the plaintiff, as he had before been to accept one from the company. No such necessary conflict is shown in the case. He was the agent of the company for the purpose of procuring releases of the right of way for its road. But how was he to procure them? By fraud or other undue means; by the grabbing and appropriation of instruments signed and sealed, but not delivered nor to be delivered, as completed and fully executed instruments; or in any other way than by the free consent of the releasors? Certainly not. Nothing of the kind can be presumed, nor could the law recognize the valid existence of any such agency, if an attempt had been made to create it. If then the plaintiff having signed and sealed the instrument of release, had handed the same to Carrol and formally said, "I hereby hand you, as my agent and depositary, this paper to be held and retained by you until the condition heretofore named and understood between us has been performed; and, in case of its non-performance, the same is by you to be returned to me;" what was there, either in the relations or obligations of Carrol to the company to prevent his acceptance of the trust! What duty to the company would be thereby violated? If this instrument had been handed over to a person who was an entire stranger to the company, under such similar instructions and conditions, and with similar restrictions on his authority, it is clear that it would be but an *escrow;* and had he, in violation of his trust, delivered it to the company, it would have been in the hands of the company, entirely inoperative. And the same result must follow if the acceptance of this trust by Carrol from the plaintiff involved the violation of no duty which he owed to the company. And so far as I am able to see, there was no necessary antagonism between the duties which, as its agent, he owed to the company, and those which the charge of the court below supposes him to have assumed to the plaintiff. He could faithfully discharge his duties to either, without a violation of duty to the other; and therefore, on principle, the law could impose upon him no disability to prevent his acceptance of both.

And looking into the books we do not find anything to shake, but do find something to sustain our position on this question. Counsel for plaintiff in error have been diligent in their researches and they cite us to numerous cases, all of which, however, go only to assert and sustain the general doctrine embraced in the former part of the charge of the court below. * * * *

Judgment affirmed.

☞ A large meeting of the friends of the proposed railroad from Southbridge in Worcester Co., to Palmer in Hampden Co., was held at Brimfield, Mass., last week. The estimated cost of building and equipping the road is $650,000; and responsible parties are ready to lease it, when built, for a long term of years, guaranteeing six per cent. on the cost. There is a good prospect that the road will be built,

Alexander's Roofing Cement Paint.

We invite attention to the Advertisement, in another column, of W. C. PERKIN'S, Esq., General Eastern Agent for the sale of "*Alexander's Roofing Cement Paint.*" This Cement or Paint, was first compounded in 1852, and tested by experiments and use, until 1857, since which time it has been improved upon until it has reached its present perfection. In 1857 there were made and sold 29 barrels only. In 1862, 3,594 barrels were disposed of. In 1863, to July 1, sales to the amount of 3,273 barrels were effected; and the present indications are that upwards of 6,000 barrels will find a market during the whole of the present year.

The uses to which this paint is adapted are various. Applied to Canvas, it searches out and fills every fiber and pore, rendering it soft and pliable, and *preserves it from decay.*

Used on old tarred or painted canvas roofs, it fills all the cracks, or leak holes in the old paint, and will prevent leaking for years.

On tin, zinc and iron, it has proved itself a perfect success; protecting it from corrosion or rust, leaving a smooth *wearing* surface, that *will not crack or scale* in any climate.

It penetrates wood; is impervious to all dampness or water, thereby rendering it the most valuable material for painting the upper surface and joints of car and bridge timbers, ever before used or known.

Numerous testimonials in its favor have been volunteered to the manufacturers from the superintendents of railroads, engineers, house builders, master mechanics and ship and bridge builders. It is an economical application as compared with ordinary paint; and with the addition of sand spread upon it, becomes *fire-proof.* Perfect satisfaction is *guaranteed.* For further information, and a descriptive circular, address W. C. PERKINS, Esq., 271 Broadway, New York.

New York Canal Tolls.

The gross receipts of Canal Tolls for the fiscal year ending September 30, 1863, were.	$4,986,141 40
Same for the year 1862	4,790,518 09
Increase in 1863	$195,623 31
The gross receipts of Canal Tolls from May 1, 1862, to August 31st, same year—4 months—were	$2,819,467
Gross receipts for same period in 1863.	2,672,528
Loss in 1863 compared with 1862	$146,939

The fiscal year at the Canal Department commences on the 1st day of October and closes on the 30th day of September following in each year.

The heavy shipments after September in 1862, helped to swell the tolls for the fiscal year.

The canal revenues are still adequate to meet all the constitutional charges upon them without any resort to taxation.

Jefferson Railroad, Pennsylvania.

The surveys for the Jefferson Railroad are completed, and the report of the engineer made up. We may state that the saving in distance over the Delaware River line is about 18 miles; that the grade from Hawley to Honesdale averages twelve feet to the mile, from Honesdale to within 5 miles of the Summit forty feet to the mile, and from the Summit to the Starrucca bridge fifty-four feet to the mile. It is possible that a survey will have to be made for a branch, from the Starrucca down the Lackawanna to Carbondale, before a conclusion can be reached.—*Honesdale Democrat.*

Commerce of New York.

Value of imports at New York from foreign ports for the month of August:

1861.	1862.	1863.
Entered for consumption	$3,389,695	$10,289,427	$10,004,580
Entered for warehouse	2,614,652	2,396,604	6,429,421
Free goods	1,816,224	999,992	509,781
Specie and bullion	1,049,552	92,703	113,877

Exclusive of specie	86,508,059	91,211,659	113,475,088

Railroad Earnings--Weekly.

The traffic of the Great Western Railroad for the week ending Sept. 11, 1863, was as follows:

Passengers	$28,177 75
Freight and live stock	25,181 73
Mails and sundries	1,427 74
Total	$54,787 22
Corresponding week of 1862	48,135 75
Increase	$6,651 47

The earnings of the Grand Trunk Railway for the week ending September 5, 1863, were:

Passengers	$32,470 85
Freight and live stock	36,424 48
Mails and sundries	2,800 00
Total	$71,695 33
Corresponding week, 1862	54,504 00
Increase	$17,191 33

The earnings of the Chicago and Rock Island Railroad for the 2d week of September, 1863, were $30,867 00
Do., 1862 ..... 48,738 00
Increase $17,971 00

The earnings of the Michigan Southern and Northern Indiana Railroad for the 2d week of Sept., 1863, were $66,747 00
Do., 1862 ..... 63,471 00
Increase $3,276 00

The earnings of the Michigan Central Railroad for the 2d week of Sept., 1863, were $64,967 00
Same period, 1862 ..... 64,954 00
Increase $13 00

The earnings of the Illinois Central railroad for the 2d week in Sept., 1863, were $118,000 00
Same period, 1862 ..... 100,243 00
Increase $17,757 00

The earnings of the Galena and Chicago Union Railroad for the 2d week of Sept., 1863, were:

Freight	$44,453 34
Passengers	12,487 86
Mails	1,300 00
Total	$58,241 20
Same week, 1862	42,674 19
Increase	$15,567 01

The earnings of the Cleveland and Toledo Railroad for the 2d week of September, 1863, were $29,417 00
Same week, 1862 ..... 22,353 00
Increase $7,064 00

The earnings of the Milwaukee and Prairie du Chien Railroad for the 2d week in Sept. have been $29,981 80
Same week, 1862 ..... 20,383 99
Increase $9,597 81
Total for first 2 weeks in Sept., 1863 ..... $59,075 29
" " " " 1862 ..... 47,705 64
Increase $11,369 65

The earnings of the Chicago and Northwestern Railway for the 2d week in September, 1863, were $37,108 83
Do., 1862 ..... 24,894 17
Increase $12,214 66

The earnings of the Chicago and Milwaukee Railroad for the 1st week in Sept. were $10,582 00
Same week, 1862 ..... 7,018 00
Increase $3,564 00

The earnings of the Chicago and Alton Railroad for the 2d week of September, 1863, were:

Passengers	$16,409 32
Freight	30,934 70
Sundries	3,458 00
Total	$50,802 02
Same week last year	34,386 37
Increase	$16,415 65

The Joliet road proportion is included for both years.

Commercial Intercourse with the Seceded States.

We have received a copy of a pamphlet having the general title "Commercial Intercourse with and in States declared in Insurrection, and the Collection of Abandoned and Captured Property." embracing the Treasury Department circulars and regulations, the Executive proclamations and licenses, and the War and Navy Department orders relating to those subjects. The compilation meets an acknowledged want. It is issued from the Government Office in Washington.

American Railroad Journal.

Saturday, September 26, 1863.

☞ The *postage* on the AMERICAN RAILROAD JOURNAL is only *twenty cents per annum*, payable *quarterly in advance* at the Post office where the paper is received.

Stock Exchange and Money Market.

Money articles, as they are called, and such as have ordinarily appeared in our best edited commercial journals, have been usually the history of the turns in the market, with speculations as to the character of stocks, their intrinsic values, their management, and the earnings and expenditures of the innumerable companies which they represent. The policy of the General Government, in times of profound peace, and the action of foreign governments, have but little to do with their rise or fall. But since the rebellion broke out, entirely new elements have been at work; and to be a good financier in these times one has to be something of a statesman. Not that this last

character is necessarily possessed by every successful operator, for there is an old adage, "Folly is often good luck, when Wisdom goes without bread." But even the crowd who press the Exchange are only too happy when they can get a glimmering of the purposes and opinions of the larger and more thoughtful capitalists.

It is not strange, therefore, that the great struggle in which we are engaged is the principal subject which attracts the attention of our financiers, great and small. For on the success of the war, its duration, its expense, the debt it is creating, and the possibility of foreign intervention, as an obstacle to its speedy conclu-ion, will depend the future financial condition of the country, the national credit, and the value of its public obligations.

In a letter which we recently received from a retired capitalist, whose opinions have always had great weight in this State, it is stated that in confirmation of his views as to the substantiality of this country, and its public debt, which he contends is actually so much capital in the hands of the people, he has invested no less a sum than sixty thousand dollars, a tolerable share of his fortune, in Government loans; and it is very evident from the readiness with which these are taken everywhere, he is not alone in his opinions.

We must of course continue to consider, from week to week, the events which have occurred, and are occurring, to make up our estimates of the values which are thrown upon the market, or withdrawn from it.

And first, as to the war, which for the last two months has been marked by brilliant successes, which we think are by no means to cease. Every thing tends to show that its finale in our favor is inevitable. If our armies were from this moment to stand still, the result would be the same. The Confederacy is entirely destitute of money, except that which is so depreciated as to be almost as worthless as blank paper; a currency which requires eleven or twelve paper dollars to purchase an article worth a silver dollar. In the Southwest, where our forces have liberated the unfortunate people who were obliged to submit to the dynasty of Richmond or perish, five hundred dollars of its treasury notes have lately been given for ten dollars of United States notes, and the purchaser of these notes will never see his money for them again. Mr. Toombs, high authority among his confederate friends, says their cause will be suffocated and destroyed by its immense and valueless issues of paper. Indeed, it is so worthless that the confederate Government cannot use it, and it is reduced to the primeval practice of tithing for its taxes, and carrying off in actual produce, what it is no longer able to purchase. Resistance cannot be long effectual, when the military chest contains paper promises which no one will take if he can help it, and which every one knows will never be paid.

On the contrary, while we may expect occasional reverses, mortifying as they may be, either owing to the desperate valor or wonderful cunning of our enemies, or what is still worse by the want of administrative talent in that place where it is most needed; in spite of the persistence in measures of which its warmest friends disapprove, and the refusal to make changes in those quarters where it is the conviction of the whole North and West they should be instantly made; we have the great and indisputable advantage of a system of finance which will carry us through invincibly to the end. The hearty support given the national credit has been a most remarkable as well as unexampled spectacle, of which we, and our children, and our children's children may be proud. It is an exhibition of patriotic confidence in our cause, in its happy termination, in our resources and our institutions, which excites astonishment abroad, and should long ere this have had its effect in silencing the doubts and improving the conduct of European cavillers. Next, as to the probably policy of the two nations whose acts are most likely to affect our position.

It is in vain to deny that there has been a party closely connected with the Government of Great Britain, if not the Government itself, which has in an unenlightened selfishness, desired to see this country disintegrated and reduced to fragments, instead of remaining like a rock, homogeneous and imperishable. Not content with heaping on us every epithet which could sour, and uttering every prophecy which could dishearten us, it has even ventured on a perversion of the law of nations, and a refusal to put in force its own laws to do us a mischief. It is this fact, and this apprehension of the consequences, which have so frequently disturbed our Money Market, the price of gold and the rate of exchange. On the other hand, we have not been left without witnesses abroad. A noble class of men have stood by us from first to last, bold in their efforts to enlighten their countrymen not only as to their duty but their interest, and as that is a point where even malignity is always vulnerable, we believe it may be assumed as a certainty that we need not fear any serious disturbance from that quarter. For it is plainly to be seen, even by Lord Russell, that if vessels of war may be fitted out by a belligerent that has not a single port where he can enter, or dispose of a prize, the day may come when any petty State of Germany, or any *navyless* country in South or Central America may, in turn, assail the commerce of England from any neutral port, and she will be unable to complain. So that affairs have come to this, that the policy of England towards this country must and will be changed. In the next place, with regard to France. Here is at present our greatest immediate danger. Not that we believe the Emperor will ever send any large force across the water, even to sustain himself in Mexico, much less attack us, for the reason that though he may just now have the sudden disposition to do so, he must have discovered that the French people are opposed to the whole scheme from first to last. Paris, and the leading minds of Paris, are against it; and especially its shopkeepers, who have no idea of spending their money to uphold an Austrian Prince. We do not give the Emperor credit for any other design in his whole life beyond that of advancing his own personal interests, and he knows how fickle are the people who have swung within three generations through all degrees of the circle, from a radical democracy, a despotic oligarchy, a directory, consulates, an empire, half a dozen kingdoms, to now an unmitigated despotism, and he knows that an unpopular movement might make him once more an exile. It is the opinion of some of the most sagacious observers of European affairs, that under all this show of acquiescence in the retrograde movements of France and Germany, there is an under current of disaffection and radicalism which will yet burst forth and overwhelm existing despotisms. We may therefore not fear any permanent injury from France, as at present ruled by Louis Napoleon. On the contrary the dangers to which he is about to expose himself and his family, by an unjustifiable interference with our affairs, will be made known to him, and he will be told that by encouraging a wicked rebellion abroad, he may be giving justification to those who have some reason to attempt his overthrow. All these thoughts must enter his mind, and the change of opinion in England which he has failed to drag into a war with Russia, and this also with Mexico, will beyond all question make him pause before he takes the last and irrevocable step. It must be remembered also that the South American republics see in the downfall of Mexico what may be their fate, and by a general alliance are very likely not only to defend their integrity, but cut off the active and flourishing trade which the French as well as the English are now enjoying with them.

It is the consideration of these subjects which has been a disturbing cause in our money market the last few weeks, and has raised a second panic within a few days. Gold suddenly rose to 140 and exchange sympathised with it. Stocks felt the influence of the prevailing alarm, and the interest of money went up again. One cause and a legitimate one for the recent rise in gold, is the fact that a million and a half dollars have been required by the importers all through the weeks of August, for the purpose of paying their duties at the Custom House, and it will not come into the hands of the people until it is paid back as interest on the Government bonds shortly falling due. A good many millions will be disbursed in the course of a few weeks as dividends, and this will lower the price beyond all question. Money continues in fact unchanged in rate, with the exceptions in favor of certain houses of stability, by whom money is attainable two per cent under the average. Stocks were pulled down a little by the usual rumors of recognition, rams and Rosecrans defeated; all of which up to this moment are false, but on Wednesday and Thursday, there was a favorable reaction. Rosecrans, with an inferior force engaged, has fully sustained himself, and is now reinforced. The rebels have played their last card in she South West as will soon be evident. There is no recognition as yet, but on the contrary, there is a skeleton in the Imperial Chambers, and its bones are much disturbed. The rams are to be detained, and a universal voice is going up throughout all England against the bad faith, and illegal hesitation of the British Government.

We learn that an arrangement has been made, or very soon will be, by which the New York Central railroad will become practically the owner of the Harlem, or in other words that the former is to have the use of the latter from Chatham to Morrisania, and its terminus on the East River. The Harlem is to have a track across the bridge at Albany, and be well paid for its facilities. This plan was inaugurated by the late President. The Broadway Railway will be commenced without delay; and new street cars have been ordered for its use.

For the usual careful and accurate reports of the sales of stocks, bonds and other securities we refer our readers to the accompanying tables.

Matthew T. Brennan, City Controller, advertises for proposals for half a million of the 6 per cent. bonds of the City of New York, issued to pay bounties to volunteer soldiers. The bids will be opened on the 1st of October.

The Chicago and Rock Island Railroad Company have declared a half yearly dividend of three per cent., payable 10th October.

The Philadelphia, Wilmington and Baltimore Railroad Company announces a semi-annual dividend of five per cent, free of Government tax, payable on the 1st of October.

The Chicago and Alton railroad will pay at the office of Messrs. G. S. Robbins & Son 54 William street, the interest due 1st October on the income bonds.

The semi-annual interest, due Oct. 1, 1863, on Bonds of the St. Louis, Jacksonville and Chicago railroad, will be paid on and after that date, on the presentation of the coupons, at the office of M. K. Jesup & Co., No. 59 Exchange place, N. Y.

The Hartford and New Haven Railroad Company have declared a quarterly dividend of three per cent. and extra five per cent., payable Oct. 1.

The Lykens Valley Railroad Coal Company, a dividend of three per cent, free of Government tax, payable on the 22d instant.

The Lowell and Lawrence Railroad Company have declared a dividend of three dollars per share, (exclusive of the national tax) payable on the first of October.

The following quotations of sales of Railway and other securities are in addition to those given elsewhere in our columns:—

Inter-colonial Railway.

We learn from the Quebec *Mercury* that Messrs. Tupper and Tilley, the representatives of the governments of Nova Scotia and New Brunswick, propose to abandon so much of the plans pertaining to the Inter-colonial Railway survey as relates to the employment of a second engineer. They concur in the appointment by Canada, of Mr. Sandford Fleming, of Toronto, who will therefore be entrusted with the entire responsibility of the survey on the part of the Provinces; his only associate being the engineer appointed by the Imperial authorities. The survey will be proceeded with immediately, and the arrangements contemplated by Mr. Fleming are such as will ensure its completion within a comparatively brief period.

Massachusetts Railroad Decision.

In the Supreme Judicial Court, in the case of Johnson Warren v. the Fitchburg Railroad Company, claiming damages for personal injuries sustained in August, 1854, at the Somerville station on that road, the jury have returned a verdict, of $5750 for the plaintiff.

In this case, the court ruled that it was carelessness on the part of the corporation to run a train at full speed over the track between the depot and another train standing on the outer track waiting for passengers to get on board. It was also ruled that the corporation having sold a ticket to the plaintiff, was liable to damages for injuries while he was going to the train as much as after he got into a car.

Philadelphia and Reading Railroad.

The net profits of this road for the month of August were $324,941 64, against $220,516 82 for August, 1862—an increase of $104,424 82. The total net profits for nine months were $1,905,-172, against $1,259,081 in the corresponding period of the previous year. This is an increase of $646,091. If the same rate of increase of net profits on last year's business continues to the end of the present fiscal year, as there is no reason to doubt, in the present condition and prospects of the coal trade it will, the net increase for the year will reach $807,614. This is very large, and proves the wonderful capacity of the road and the company's rolling stock.

Pacific Railroad.—Western Division.

The people of California are pushing their end of the Pacific Railroad with great energy. Several telegraphic dispatches have been recently received announcing the completion and actual operation of a part of the line, but there is some discrepancy in the statements. It is safe to believe that cars are running between San Francisco and San Mateo, equivalent to a distance of about thirty miles.

☞ John Riley, Esq., has been elected President of the Second Avenue Railroad Company, in place of D. M. Hughes, resigned. The Second Avenue Company is fortunate in securing the services of Mr. Riley. He is a gentleman of high standing in the community for character and energy.

☞ The following gentlemen were elected Directors of the Central American Transit Company on the 14th: Moses Taylor, J. J. Phelps, W. H. Webb, F. Morris, J. E. Body, B. F. Randolph, F. C. Gebhard, M. B. Bramhall, Ogden P. Edwards.

☞ Work is going on rapidly on the Atlantic and Great Western Railroad, west of Akron. The track is now being laid from Akron to Bridgeport, in Wayne County, and it is believed that in October track laying will commence from the latter point to Mansfield and Gallion. The company have purchased a large lot of ground where the track crosses the Pittsburgh, Fort Wayne and Chicago Railroad, with the design of erecting there a large Union depot building. About 3,300 hands are now engaged on the line of the road.

☞ There are along Oil Creek 150 steam engines and 70 refineries and not a foundry or machine shop more convenient than Erie or Pittsburgh. A big opening for some machinist.

Northwestern Virginia Railroad.

In the First Branch of the Baltimore City Council on the 17th inst., an ordinance was presented to provide for the completion of the Northwestern Virginia Railroad. The essential difference between the new bill and the one vetoed by the Mayor is in the arrangement by which the Baltimore and Ohio Railroad Company is to work the Northwestern Virginia Railroad for ninety-nine years, and the city is made a preferred creditor, receiving from the Company on the 1st of July, 1864, and semi-annually thereafter, of the net earnings of the road for three years, a sum equal to three per cent. on the amount of stock to be issued by the Northwestern Virginia Railroad; and if the amount of such earnings is not sufficient for said payments, then the whole amount of such earnings for the said six months shall be paid to the city—which, however, is not entitled to any other or further dividend on said stock during the term of three years; the agreement with the Mayor and city to contain a stipulation binding the Baltimore and Ohio Railroad Company not to discriminate against the said Northwestern Virginia Railroad in working the same. The ordinance provides for the capitalization of the debt due by the Northwestern Virginia Railroad. It was referred to the Committee on Ways and Means.

Lehigh Valley Railroad.

The work of widening the road bed of the Lehigh Valley Railroad for a second track, is almost completed between Allentown and Easton.

The Lehigh Valley Railroad Company, under whose auspices the Penn Haven and White Haven Railroad is being built, are making surveys for an independent road from White Haven across the Nescopec mountain and down into the Wyoming coal basin.

Simultaneous with the operations of the Lehigh Valley Railroad Company in the mining districts, the Central Railroad Company of New Jersey are extending their road from its present terminus at Elizabethport, across Newark bay to the Hudson river at Jersey City, to which latter place its coal shipping piers are also to be removed from Elizabethport.

These works, jointly considered, indicate an enlarged scale and plan for future operations.

Intercolonial Railway.

In the Canadian House of Assembly, on the 1st inst., Hon. Mr. McGee asked whether it was the intention of the ministry to undertake a survey of the proposed route or routes for the Intercolonial Railway, and if so, when it was proposed to commence actual operations on the said survey, and whether any proximate date could be fixed when the report of the said survey might be expected to be made? Hon. J. S. Macdonald said that the surveyor on behalf of Canada had been named; and that arrangements would be made during the present week, as to the commencement of the survey.

Coals from the Rhine.

During the past week the Prussian bark Baltimore, laden with 480 tons of coal, arrived at this port from Rotterdam. The mine from which this cargo was received is located on the river Rhine, and in character is represented as highly bituminous. This is the first cargo imported into this country from these mines, and is consigned to Messrs. Bros. Boninger.—*Baltimore Sun.*

☞ The Erie Railway Company have for some time been engaged in laying a second track on that portion of the Union Division between Paterson and Sufferns. The grading of about two-thirds of the distance (16 miles) is about completed and partly laid with the superstructure. On some points both tracks are being strengthened and improved. This will complete the double track from Long Dock to Elmira. The Company are also rebuilding the large repair shop at Paterson, burned down about three months ago. Already part of the work has been finished and put in operation.

☞ A gang of employees of the Sandusky, Mansfield and Newark Railroad, under direction of the company, recently took up two miles of the track of the Huron Branch of that road. The iron was removed to Mansfield. The object is supposed to have been to avoid an injunction and litigation. The branch from which the iron was removed was what was formerly known as the Huron and Oxford Railroad afterwards consolidated with the main line.

☞ The St. Louis *Democratic* says: "The railroad war is at an end. The three leading railroads leading East from this city, have compromised their differences, and returned to their old local rates. Rates East will hereafter be guided by rates *from* Chicago, and will be the same by *al* routes."

☞ The Baltimore and Ohio Road Company now take freight at the following rates: New York to Columbus, 1st Class 45, 2d Class 40, 3d Class 40, 4th 33; New York to Cincinnati, 1st Class 55, 2d Class 45, 3d Class 45, 4th Class 38; New York to Louisville, 1st Class 85, 2d Class 70, 3d Class 70, 4th Class 50; New York to St. Louis, 1st Class 1 03, 2d Class 82, 3d Class 75, 4th Class 52.

☞ The subject of building a railroad from Lansing, Mich., via Grass Lake, in Jackson County, to connect with the Jackson branch of the Michigan Southern Railroad, at Manchester is attracting attention. The entire distance to be built is but forty-seven miles, and there is ample means along the route to put the road in condition for the iron, and assurances from a reliable source have been received, guaranteeing the iron and the putting of the road in good running order.

☞ At the late annual meeting of the Mariette and Cincinnati Railroad the following well-known gentlemen of this city were elected members of the Board of Directors for the ensuing year:—Le Grand Lockwood, Esq.; Blakely Wilson, Esq., of Cammann & Co.'s; Fred. C. Gebhard, Esq., of Schuchardt & Gebhard, and William Hoge, Esq., of Wm. Hoge & Co.

☞ The Toronto *Globe* says that Railway traveling is still on the increase. The Grand Trunk Trains, as also those of the Great Western Railway, are crowded both on arrival and departure.

☞ We understand that the fences on the Hudson River Railroad, between this city and Yonkers, are being removed, with a view to the laying of a third track, in order to accommodate the increasing business of the line.

☞ Crude oil is now selling at $6 per barrel at the wells, $7 at Oil City, $7 25 at Franklin, and $10 50 including packages at Titusville.

The Hudson River Bridge Co. at Albany.

At the annual election held on the 23d inst., the following persons were chosen Directors:—Erastus Corning, Albany; Dean Richmond, Buffalo; Samuel Sloan, New York; Chester W. Chapin, Springfield; William H. Swift, Boston; Sidney T. Fairchild, Cazenovia; Henry H. Martin, Albany; John V. L. Pruyn, Albany; Leonard W. Jerome, New York.

Inspectors of the next election—Chauncey Vibbard, Erastus Corning, Jr., John Ellis.

The New York Central Loan.

The new six per cent. loan of $1,000,000 twenty years' stock, with an annual sinking fund of two per cent., recently advertised for by the New York Central Railroad Company, has been awarded to the successful bidders at 101½ per cent. and upward.

Valuation of Salem.

The valuation of Salem this year is—personal property, $7,758,000; real estate, $6,830,700; total, $14,588,700—an increase of $352,000 over last year. Rate of taxation $10 40 on $1000.

Terminus of the Erie Railway.

The Company having made Buffalo the prominent terminus of the Erie Railway, the passenger and freight business have materially increased from that point over this road. It is gratifying evidence of the growing prosperity of the Erie Railway, to witness, as we frequently do, six or seven well filled cars, with mostly through passengers, on the express trains. Those palace-like sleeping cars on this road afford the night traveler a good opportunity to enjoy a comfortable lullaby repose while traveling at the rate of thirty miles per hour—finding himself at the end of his journey, rested and fresh for business.—*Hornellsville Tribune.*

[From the U. S. R. R. and Mining Register.]

The Gold and Silver Mines of the Great Colorado Basin.

EXTRACTS FROM THE JOURNAL OF DR. WILLING'S EXPLORATIONS.

Continued from page 897.

The San Juan river rises by numerous branches in the San Juan and Sierra Madre mountains. The principal affluents are the Chaca, which receives small streams from both the Chaca and Sierra Tuncha mountains, and the northwest branch of the San Juan river, which rises in the San Juan range, immediately opposite the La Plata Peak, and but a short distance to the summit of Mt. Janiss. This latter stream forms the pass from the Uncompadre to the valley of San Juan. The elevation of this pass is nearly 11,000 feet.

The Navajoes* Indians inhabit the valleys of the San Juan, Chaca and Chelle rivers. They occupy a considerable area of land, which they appropriate to agricultural and pastoral pursuits.

Their flocks of sheep and herds of horses and cattle are very large, and afford employment for the greater part of their population. They cultivate the soil, and raise an abundance of wheat, maize, pumpkins, melons, grapes and peaches. Some little cotton is raised by them, but the primitive style of working it up into apparel does not approximate the quantity of woolen fabrics used by them.

It is a remarkable fact that this tribe of Indians, as well as the Cosninas and the Moquis, retain many of the arts and usages of the ancient Montezumas, and still live in houses constructed of material of a substantial character, the structures of which are upon a similar scale to the buildings of the old city of Mexico.

The interesting features relative to the Navajos country is that there can now be no doubt that it

* Sometimes called Na-ba-joes—pronounced Na-vah-ho.

was the ancient residence of the Aztecs, and that their country was the place from whence the Montezumas derived all their great wealth.

It must be understood that previous to the period of the present explorations of that country but little was known of the true character of the country. The historical accounts given of the country by Espejos, de Nica, and Pedro Font, and its great wealth in minerals, is corroborative of the present condition of the country, and which recent explorations have substantiated.

Whether or not San Juan was the locality where was situated the city of Quivary is a matter of conjecture. Espejo mentions, in his accounts of travels to the Viceroy of New Spain, having visited a city of that name, and having eight market places, and the people who lived there as being proficient in many of the arts and sciences, and also who possessed (to use his own language) "great store of gold, silver, and precious stones." The ruins now to be seen upon the left bank of the San Juan river answer to his description of that part of the country where this famous town was said to exist.

The historical account of this country is submitted in the following note, marked (*a*). The tradition of the Indians will form the subject of a part of the next paper in the present series.

NOTE (*a*).—*History of the Country from the Year 1540 to the Present Time.*

The traditionary history of the Indians, who inhabit the territory now known as Arizona, or the ancient abode of the Aztecs, gives but little insight as to the origin of the settlements in that region.

After the Conquest of Culiacan by the Spaniards, Don Antonio de Mendoca, Vice Royal and Captain General for the Emperor's Majesty in New Spain, commissioned Friar Marco de Nica, a Franciscan Monk, to make an exploration of the country, where it was supposed the Montezumas obtained their wealth of gold, silver and precious stones. His companions were Friar Honoratus, a negro named Stephen, and Indians of the town of Cuchillo. Departing on Friday, the 7th day of March, 1539, from San Miquel, he proceeded to Petatlan, thence following, "as the Holy Ghost did lead," he travelled twenty-five or thirty leagues. After a long and wearisome journey, across deserts that were without water for long intervals, the Friar arrived at the valley of Coracones; here he was informed that within four or five days' travel there was a mighty and large plain, wherein were many great towns and people clad in cotton; and when he showed the people of Coracones certain metals which he carried, they took the mineral of gold and told him that, "thereof were vessels among the people of that plain, and that they carried certain round green stones† hanging at their nostrils and at their ears, and that they had certain thin plates of gold wherewith to scrape off their sweat, and that the walls of their temples were covered therewith."

By a reference to modern maps it will be seen that this valley or plain corresponds with the Rio des las Casas Grandes—where at this day there are ruins—about one hundred and fifty miles east from the valley of the Rio Sonora.

Whilst sojourning within the Coracones country he met with three Pintados Indians, the present race called Papagos and Pimos, whose country borders on the kingdom of Cibola or the seven cities.

Friar Nica thus relates his description of Cevola: "It is a great city, inhabited with great store of people and having many streets and market places. In some parts of this city there are certain great houses, of five stories high, wherein the chiefs of the city assemble themselves at certain seasons of the year; the houses are of lime and stone. The gates and small pillars of the principal houses are of turquoises, and all the vessels wherein they are served and other ornaments of their houses are of gold. The other six cities are built like unto this, whereof some are bigger, and Ahacus is the chiefest of them. At the Southeast there is a kingdom called Marata, where there were wont to be many great cities built of stone with divers stories; and these do wage war with the lord of the seven cities, through which the kingdom of Marata is for the most part wasted."

The explorations of Lieutenant Ives were also hurried and confined to main trails leading from one point of habitation to another, and did not extend to the discovery of any very notable metallic feature of the country; nor does he even allude to the ruins of the San Juan, or the immense pyramids of sulphur near the ancient volcanoes of Cosninas and Jumbuicrari. But Lieutenant Ives establishes one important fact bearing out the traditions of Indians. In the ruins of cities he discovered ancient towns, fragments of pottery ware, and also the present towns of Zuni and Moqui. These evidences of the once populous state of the country corroborate the statements of the Spanish explorers, who enumerate over one hundred towns as being in existence as late as the year 1540, containing more than 300,000 souls.

It is highly probable, and indeed there is sufficient data to establish the fact, which will be more particularly alluded to in another place, that within the past three centuries this country, as well as the entire Pacific coast, from Mazatlan to Mount Sharta, in California, and Puget's Sound in Washington Territory, has been subjected to frequent earthquakes, and that these causes may have swallowed or engulphed whole communities within the space of an hour, and the famous city (whether fabulous or not) of Qui-vi-ra might have thus been destroyed, without a vestige left behind to mark the spot where once it stood and flourished. But it is not altogether improbable that many of these towns, the ruins of which are still extant, might have been destroyed by human agency, occasioned by strifes which are so natural in populous districts between one nation and another.

The traditions, although confused, and in many instances of decidedly superstitious character, in many of its relations, nevertheless, coincide with the present condition of the country, and so far as its metallic wealth is concerned is established beyond a doubt; and it becomes necessary in this place to notice briefly some of the geological features connected with this region, to prove the certainty of what is related by the Indians as having once existed.

This is a very interesting subject, and would require more space to do it justice than is allotted in this series of extracts. Yet, the large area of country we have under consideration requires an investigation of all its parts in order to determine its value. 1st. The immense deserts extending from the Arkansas river, southward to the Pacific coast and westward to the Gulf of California, were without doubt large lakes at one period. Their shores are observable in many places, especially upon the bluffs of the Arkansas; the high table lands of Zuni and the foot-hills of the Sierra Madre, west of Santa Fe; also on either side of the ranges of mountains which pass through the provinces of Chihuahua, Sonora and Durango, upon the west. The shore is more fully exposed in the foot-hills of the San Bernandino mountains.

These evidences of the former existence of large inland seas, consist in the appearance of water-worn rocks forming the outline of the several basins, and the shelving rocks worn away by the splashing waves and assuming every conceivable form and shape. On the margin of these shares fossil remains are the most abundant, all of which are of aquatic origin.

The tradition of the Indians relative to the former existence of these lakes is fully borne out by the appearance of the country, and at various points immense beds of cobble-stones appear as upon the Gila, the South Platte, and upon the Colorado. These are characteristic of much larger streams than the present feeble creeks and rivers that pass out from the mountains. It is evident that the rivers and their affluents are of recent origin, and that they could not have deposited such immense beds of cobble and boulders, even where they happen to pass through or near such places. Indeed, the idea of there having once existed rivers of greater magnitude and carrying a greater volume of water is fully established; for we see throughout this entire country high mountains resting upon beds of cobble-stone or rounded water-worn rocks. It is easy to account for this peculiar feature in the conformation of the country, and which is accredited to displacement of heavy bodies by earthquakes and volcanic eruptions.

† Turquoises, a kidney-shaped stelactitic mineral, opaque and of various colors, esteemed very highly as an ornament when highly colored and polished.

The Mercantile Mutual
INSURANCE
COMPANY,
No. 35 WALL ST., NEW YORK.

INCORPORATED, APRIL, 1843.

ASSETS OVER $1,250,000.

MARINE and Inland Transportation risks on Vessels, Freight and Merchandise insured on the most favorable terms.

Policies are issued, loss, if any, payable in Gold, or at the office of RATHBONE, BROTHERS & CO., Liverpool, if desired.

Parties effecting insurance at this office may participate in the Scrip dividend of profits, or receive an equivalent cash discount, at their own option.

The risk of war covered at the lowest current rates.

Redemption of Corporation Bonds.
THE VOLUNTEER SOLDIERS' BOUNTY FUND BONDS of the CORPORATION of the CITY of NEW YORK, becoming due and payable on the 1st day of October proximo, with the interest thereon, will be paid on that day, on the presentation of said Bonds at this office.

Proposals for a Loan of $500,000
Sealed proposals will be received at this office until WEDNESDAY, Sept. 30, at 2 o'clock P. M., for the purchase at not less than their par value of the whole or any part of the sum of $500,000 of Volunteer Soldiers' Bounty Fund Redemption Bonds of the Corporation of the City of New York, authorized by Chapter 25 of the Laws of 1863, and by an Ordinance of said Corporation approved Sept. 18, 1863.

Said Bonds will be of the denomination of $1,000 each, and will bear interest at the rate of 6 per cent. per annum, payable semi-annually on the first day of May and November of each year, and the principal thereof will be redeemable on the first day of November, 1867.

The proposals will state the amount of said Bonds desired, and the price of $160 thereof, and the persons whose proposals are accepted will be required to deposit with the Chamberlain, at the Broadway Bank, on Thursday, October 1, 1863, the sums awarded to them respectively, including the premiums thereon.

On presenting to the Comptroller the Chamberlain's receipts for such deposit, the parties will be entitled to receive bonds for equal amounts of the par value of the sums awarded to them, bearing interest from Oct. 1, 1863.

Each proposal should be sealed and indorsed "Proposals for Volunteer Soldiers' Bounty Fund Redemption Bonds of 1867," and the same inclosed in a second envelope addressed to the Comptroller.

The Comptroller reserves as usual, the right to reject any or all bids if the public interest should require it.

MATTHEW T. BRENNAN,
City of New York, Department of Finance, Comptroller's Office, Sept. 18, 1863.

ENGINEER'S FIELD BOOK,
By C. S. CROSS, Civil Engineer.

THIS work is designed as a pocket companion, and embraces, in the most compact form, all the necessary tables for prosecuting railroad surveys. It is subdivided as follows:—

1st. The method of staking out railroad curves and keeping field notes.
2d. Railroad curve tables for expeditiously determining the points at which commences the curving.
3d. Application of the Prismoidal formula in determining the quantities of excavation and embankment of canals and railroads from transverse sections.
4th. Excavation and embankment tables for expeditiously determining the cubic yards from mean area.

It is a plain, clear and most valuable book for practical Railroad Engineers. Sent, **free by mail**, upon receipt of the price. For sale at this office. Price $1.

CHESTERMAN'S ENGLISH TAPE LINES, 50, 60, 70, 80, and 100 feet, in tenths and links.

FINK'S PATENT IRON RAILROAD BRIDGE.

THE undersigned is prepared to manufacture and build in any part of the United States and Canada, at reasonable terms, FINK'S PATENT IRON BRIDGE in spans from 20 to 300 feet. The same is favorably known, well tested and already extensively introduced, is stronger and more economical than any other Bridge now in use, requires no repairs, and no adjustment, but is perfectly adjustable. For plans and particulars apply to

C. J. SCHULTZ,
Letter-box No. 1,392, Pittsburg, Pa.

DAVISON, DICKINSON & CO.,
CIVIL, MINING AND MECHANICAL ENGINEERS,

No. 229 BROADWAY, NEW YORK,
AGENCY, No. 58 BALTIMORE STREET, BALTIMORE, MD.

PLANS AND SPECIFICATIONS FURNISHED FOR ALL KINDS OF MACHINERY, and superintended during construction. RICE HULLERS, CLEANERS and POLISHERS. GAS WORKS ERECTED on THE MOST APPROVED PLANS. New and Second-hand MACHINERY constantly on hand. IRON BOUGHT AND SOLD ON COMMISSION.

SOLE AGENTS FOR BATES' STEAM GAUGE.

MANUFACTURERS OF MARINE CLOCKS, STEAM ENGINE REGISTERS, INDICATORS AND GAUGES, ALSO IRON PIPE, FITTINGS, BELTING, HAIR AND WOOL FELTING.

HENRY J. DAVISON. WM. LEE STILES. P. P. DICKINSON.

WARNCKE & BROWNELL,

RENOVATORS AND DYERS OF PLUSHES ON CAR SEATS, STEAMBOATS, AND FURNITURE.

WE restore the color to plushes on car seats, steamboats and furniture, without removing the plush from the seat. Colors when put on, as bright and durable as new goods. Time of detention of car two days, or less. Orders for work solicited.

The process being patented, the public are hereby cautioned against infringement.

Territory and shop right for sale. Address

MUNN & CO'S
PATENT OFFICE.
ESTABLISHED 1842.

DURING the past twenty years, Messrs. MUNN & Co., in connection with the publication of the WEEKLY ILLUSTRATED SCIENTIFIC AMERICAN, (the only paper devoted to the Mechanic Arts in the country,) have acted as Attorneys for procuring letters patent in the United States and all foreign countries.

They would state that they have acted, during this period, as agents for more than

TWENTY THOUSAND INVENTORS;

In fact, they have become identified with the whole brotherhood of inventors and patentees, at home and abroad. Thousands of inventors for whom they have taken patents have addressed to them most flattering testimonials; and the wealth that has inured to the inventors whose patents were secured through their office, and afterward illustrated in the SCIENTIFIC AMERICAN, would amount to many millions of dollars!

Messrs. MUNN & Co. are prepared to attend to patent business of all kinds, in the quickest time and on the most liberal terms.

For further information, send for a pamphlet which contains the Patent Laws of the United States, and much other valuable information of importance to inventors and all others who own patent property. Also pamphlets of information furnished regarding the Patent Laws of all foreign countries.

For further particulars address

MUNN & CO.,

SUBSTITUTE FOR
CAR DUCK.

Kingman's Car Covering.

THIS is a heavy Canvass imbedded in a coat of Elastic Mastic or Paste which is applied directly to the boarding of the top of the car, and then thoroughly painted with three or four coats of paint, thus making a covering VERY MUCH LIKE CAR DUCK, but at this time at half the cost. It is now successfully used by many Railroads and Car Builders. Directions and particulars sent when requested. This Mastic and Canvass for sale by

WILLIAMS & PAGE,
67 Water street,
March 1863. **Boston.**

HAMILTON E. TOWLE,

CIVIL AND MECHANICAL ENGINEER

OFFICE, { **156 BROADWAY,** NEAR MAIDEN LANE, NEW YORK.

SMITH'S
Railroad Air Light Comp'y.

THIS COMPANY OWNS THE EXCLUSIVE RIGHT of SMITH'S AIR LIGHT FOR RAILROADS, and is prepared to sell to Roads the right to use the same. We have arrangements perfected for furnishing Lamps and Burners at about the same price charged for the Oil and Kerosene Lamps by other Manufacturers.

That Railroad Managers may know the value of this LIGHT, we annex letters from the Hon. CHAUNCEY VIBBARD, the General Superintendent of the New York Central Railroad, and also from the Master Mechanics of the same road, showing its comparative cost with that of Oil Lights:

NEW YORK CENTRAL RAILROAD,
GENERAL SUPERINTENDENT'S OFFICE,
ALBANY, November 15, 1862.

TO THE MANAGERS OF RAILROADS:

Gentlemen,—This Company has adopted and is furnishing all their locomotives with the "SMITH AIR HEAD LIGHT."

They do this both on account of economy and the very superior light it affords.

We regard it as vastly superior to any light that has ever been produced, and commend it to the consideration of railroad managers.

Very respectfully, etc.,
C. VIBBARD, Gen'l Sup't.

NEW YORK CENTRAL RAILROAD,
MASTER MECHANIC'S OFFICE,
WEST ALBANY, January 28, 1863.

DR. GEORGE HAND SMITH:

Dear Sir,—Below please find the cost of locomotive lamps burning oil on this division.

Supposing oil cost $1 57 per gallon.
Cost per hour, 5 cents.
Cost of wicks, chimneys, per year, $4 80.
Estimate cost of leakage, gumming and overflow, one-fourth of the consumption.
In the year 1861, when the lamps were all oil burners, the cost of repairs were $10 20 per year.
You will please add the overflow to the actual cost per hour, which would make 6.25 per hour.

Your most ob't servant,
EDWARD H. JONES,
Master Mechanic, Eastern Division.

300 days, 5 hours each day, 1,500 hours, 6¼c. per hour	$93 75
Repairs of lamps for one year	10 20
Wicks and chimneys	4 80
	$108 75

NEW YORK CENTRAL RAILROAD,
MASTER MECHANIC'S OFFICE,
ROCHESTER, Feb. 2, 1863.

DR. GEORGE HAND SMITH:

Dear Sir,—In answer to your inquiries in reference to your Air Light, I would state that we have upon this division of the road 23 of your lights on our first class passenger and freight engines. I find the light consumes about five feet of common gas per hour, which, at the price of gas at this place, $2½ per thousand, makes the cost of light for each engine 1¼ cents per hour.

Renewing my often expressed opinion that your light, for its reliability, its economy and superiority, far exceeds any light heretofore used on engines,

I remain, very truly, yours, etc.,
DAVID UPTON,
Master Mechanic, Western Division.

300 days, 5 hours each day, 1,500 hours, 1¼c. per hour	$18 75
One-sixth waste of gas	3 12
Repairs of lamps for one year	5 00
	$26 87

Further information may be obtained at the office of the Company, **21 Nassau st.**, or by addressing

CHAS. W. WELSH,
Secretary.

The Union Pacific Railroad.

The public was quite taken by surprise on Saturday morning last, to learn that the Books of subscription of the Union Pacific Railroad closed on Friday night, and that more than the two millions necessary to preserve the charter had been subscribed, and the ten per cent required paid in. By whose authority the Books were so suddenly closed, without previous notice through the newspapers, we do not know, and whether the arrangement was strictly in good faith is questionable; but be this as it may, we accept the fact of the subscription as one of the greatest importance, and entitled to the highest commendation. We had in fact made up our minds that the project had been abandoned, for we have seen no activity on the part of the Executive Committee for the year past, and have been unable to arouse it to a sense of its responsibilities. Some secret meetings have been held in this city to consider what was to be done, but from the President of the Corporators, or the Secretary, we have had no official announcement of what might, could or should be done to preserve the franchise. The subscribers are all men of mark, Capitalists, Bankers, Railroad men, Express men, Brokers, and Generals in the army, all of eminent position in their respective pursuits.

The wealth they represent is enormous, and their influence co-extensive. If it had been suspected a few weeks since that any such combination was likely to be formed, or that the subscribers had even made up a favorable opinion of the proposed work, the subscriptions would have been, instead of two millions, ten millions. For the public impression has been, and the calculation from the first, even at the meeting of the corporators at Chicago, that the capitalists only thought of getting interest when they made an investment, and as this was not to be expected for many years from the Pacific Railroad, their support was not immediately anticipated. We are happy to see that this calculation was a false one, and that the very persons who ought to have taken hold of the project have done so. Among the subscribers are: Wm. B. Ogden, of Chicago, President of the Corporators, a man of large wealth, enterprise, and extensive connections with railway companies; A. A. Low, an East India merchant, President of the New York Chamber of Commerce, and a liberal and enlightened man; T. C. Durant, President of the Chicago and Rock Island Railroad Company; Wm. E. Dodge, a distinguished merchant, and member of the Chamber of Commerce; Erastus Corning, President of the New York Central Railroad; Dean Richmond, a prominent party in its direction; and John V. L. Pruyn, its Treasurer; Duncan Sherman & Co., and Winslow, Lanier & Co., of this city, leading and wealthy bankers; Gen. John A. Dix, President of the Mississippi and Missouri Railway; Satterlee & Co., New York Brokers; C. H. Russel, a wealthy merchant; H. G. Stebbins, Banker, and M. C. elect from Richmond Co.; M. O. Roberts, a proprietor in the California Steamship Company, operating by the way of Nicaragua; Geo. Griswold, a shipping merchant; E. Nye, one of our most famous packet Captains; Moses Gaylor; A. G. Jerome, a Banker, now largely interested in the Harlem and Hudson roads; Thurlow Weed, whose operations the last two years have been notoriously successful; August Belmont, the great foreign Banker, and protegee of the Rothchilds; John Butterfield, the originator of the Overland Mail; Allen Campbell, ex-President of the New York and Harlem Railroad; Morris Ketchum, a Banker, and confidential friend of Mr. Chase; Brigham Young, of Mormon notoriety, whose assistance in making the road was declared at Chicago to be indispensable; Joseph A. Gilmore, Governor of New Hampshire; Cooper & Hewitt, the well known manufactures of railroad iron; J. J. Cisco, assistant Treasurer of the United States; Moses H. Grinnell; Dehon, Clark & Bridge, Importers of Railroad iron; E. T. H. Gibson, J. Edgar Thomson, President of the Pennsylvania Railroad Co.; Nathaniel Thayer; S. J. Tilden, the well known railway lawyer and administrator of intestate companies; Clark, Dodge & Co., Bankers; S. B. Chittenden, merchant; S. Sloan, President of the Hudson River Railroad Co.; Geo. T. M. Davis; E. W. Dunham; J. W. Jerome, Banker; Wm. R. Travis; Geo. W. Quintard, the eminent engineer and machinist; T. W. Wolcott, of Albany, President of the Mechanics' and Farmers Bank, and Treasurer of the Union Pacific Railroad.

If these gentlemen have subscribed in good faith, as we no doubt they have, they will not have the slightest difficulty in constructing the road. Not only this, they will not only deserve and receive the thanks of the country, but will unquestionably make a great deal of money, and richly deserve success. We have no doubt but that the present action of these gentlemen has been very much owing to the wonderful revelations of the mineral wealth of the country through which the Pacific Railway must pass. When long years ago Col. Gilpin began his patriotic task of exploiting the great basins of the Cordilleras and communicated to the columns of the *Herald*, from personal knowledge of the fact that there we had a new ophir, and another Golconda, the announcement was received with perfect incredulity. It is now ascertained that apparently his most extravagant assertions fall short of the truth. The gold, silver and precious stones in Colorado alone are inexhaustible. The actual surveys and careful calculations of Dr. Willing, a scientific person, show that the wealth of these mining territories may be estimated at hundreds of billions, even in the surface gold alone, and that in short there is no possible limit to the production.

Here, then, we have one powerful motive for the construction of the Pacific Railroad, to the foot of the Sierra Madre, if it never goes any further. Just as soon as Colorado can be reached by rails, the emigration and traffic will push them to their full capacity of transportation. The wagon trains even now are miles in length, and continually "on the move." When these mines can be reached in 48 hours from the Missouri, we may expect to see hundreds of thousands of emigrants, American and foreign, on their way to the mines. Denver will become a great city, and there will be distributed the goods, wares and merchandize from the East required by the mining population. The Union Pacific Railroad will be able as soon as it is constructed, to make large dividends in gold, and we had almost said in the rarest of precious gems. We have for months past endeavored to impress our readers and the public with these facts, and to place the Pacific road before them as a work of the first magnitude not only, but likely to be one of the best properties in this country for its earnings, without reference to the immense land grants, which of themselves are of incalculable prospective value.

In the announcement of the subscription having been made, as we have before mentioned, it is said that the present arrangement contemplates "making the now rapidly growing Mississippi and Missouri road the commencement of the Pacific route." Of this, General Dix was very lately, if not now, President. It will be seen, therefore, by this statement, that the Chicago and Rock Island Railroad, and its extension by the way of the Mississippi and Missouri as far as Omaha, about 96° west longitude, and of course 4° east of the 100th parallel, will be the route of the traffic going over the Pacific Railroad. Unquestionably this route is the one preferred by the people of Chicago above all others, and its influence has unquestionably affected the present subscription, and led to the declaration that it is to be the route, even before the Board of Directors has been chosen, and the corporators resigned their trust into the hands of the new company.

This new movement has another aspect, with a complication not yet resolvable. A company, of which Gen. Fremont is President, is constructing a railroad, (formerly known as the Leavenworth, Pawnee and Western,) and is now styled the "Pacific Railroad, Eastern division," intended to connect the Eastern railroads with the Pacific at a point on the Missouri a considerable distance below Omaha, and from that point to stretch northwestwardly to the 100° between the Platte and the Republican Fork as provided by the act of Congress. Gen. Fremont's company, by its original name, was authorised in the act to receive Government bonds at the rate of $16,000 per mile, the same as the main line provided for in the same act. It is also authorised to go on and make the whole line westward that may be unfinished. So that we shall now see a race to the 100th parallel between the two organizations. Whoever gets there first will have the right of building the remainder. Gen. Fremont's Company will have less road to build than will be required, on the Mississippi and Missouri line to reach the 100th degree; and if the whole distance is to be railed in two years by the General's company, 50 miles to be finished by January, 1864, the public will certainly gain by a competition which ensures rapidity of construction.

Both the termini, at Leavenworth and Omaha, will be required beyond all question, settle the other difficulty as we may.

We rejoice to perceive that this great national work is sure to be accomplished; that national men have taken it up and carried it forward to the point of organization. When constructed, it will, beyond all doubt, revolutionize the trade of the world, and make ours the richest of all nations.

Boston, Concord and Montreal Railroad.

The receipts and expenditures of this road for the years ending March 31, 1862 and 1863, have been as follows:

Receipts:	1862.	1863.
From passengers	$67,538 81	$87,122 11
" freights	121,569 90	145,269 04
" mail	10,193 85	10,208 02
" express	3,000 00	3,000 00
" miscellaneous	1,056 17	1,680 26
Total receipts	$203,358 73	$247,279 43
Expenditures, viz:		
Maintenance of way	$37,762 95	$41,386 61
" motive power	19,999 66	27,821 70
Cost of working road	40,980 51	44,839 14
" management	5,720 65	6,080 61
Miscellaneous	6,182 53	7,805 25
Total expenditures	$110,646 30	$127,933 31
Net balance	$92,712 43	$119,346 12
From other sources	24,969 87	5,060 24
Total income	$117,692 30	$124,406 36
Disbursements	113,537 50	104,235 15
Cash, etc., on hand	$4,154 80	$20,171 21

The foregoing statement shows an increase in gross receipts of $43,920 70; with an increase in expenditures of $17,287 01—making the increase in net income, $26,633 69. The report says:

In the foregoing account of expenditures is included the amounts paid for telegraph poles from Plymouth to Littleton, and new repair shops at Lake Village, to take the place of those burnt some years since.

The payment of $12,500 to the trustees of the sinking fund, was made January 1st, 1863.

The fund, including the accumulated interest, now exceeds $97,000.

The balance of Gilmore & Clapp's claim has been paid in full, and the Directors take pleasure in reporting that the corporation has no debts except its mortgage bonds.

The roadway and equipment are in as good a condition as at any former time, and will continue to be kept so.

The hotel at Plymouth, known as the Pemigewasset House, long used as a place for passengers to dine, was destroyed by fire in the month of August last. In view of the fact that it is of the highest importance to the interests of the corporation to have a good public house established there, and it being indispensable to have a good dining place, and also to retain the travel on our road, the Directors have thought best, in connection with other responsible paaties, to take a sufficient amount in the hotel now erecting at that place, to insure its being kept as a first class house.

The Directors have caused the telegraph line to be extended from Plymouth to Littleton, and have made an agreement with the American Telegraph Company to operate the same. This gives a good and reliable line, not only the whole length of the road, but also a continuous line to Boston, and is of great benefit to the corporation and accomodation to the public.

The expenses are greatly increased by the high prices of supplies and materials used in operating and running the road, and may affect the net receipts for the coming year to a considerable extent.

The business of the new year has had a favorable commencement. What it may continue to be cannot be foretold, but we feel confident that in any event it will compare favorably with other roads similarly located. Should we be favored with a continuance of prosperity, and if the balance of the earnings, after paying the interest on the bonds and the regular instalment of the sinking fund, shall be applied to the reduction of the bonded debt, but a few years will elapse before a permanent dividend can be paid on the preferred stock.

The number of passengers carried in 1861–'62 was 68,449; in 1862–'63, 86,430. Tons of freight carried in 1861–'62, 34,128; in 1862–'63, 42,706.

The following statement will show the financial condition of the company on the 31st of March, 1862 and 1863:

	1862.	1863.
Construction	$2,850,000 00	$2,850,000 00

	$2,958,256 18	$2,992,686 06

President.—JOHN E. LYON.
Superintendent.—J. A. DODGE.
Treasurer.—THEODORE STANWOOD.

Northern Railway of Canada.

The semi-annual general meeting of the proprietors of the Northern Railway was held at Toronto on the 14th of August; the President, Hon. J. B. Robinson, in the chair. Mr. F. W. Cumberland, managing director, read the semi-annual report of the directors as follows:—

Pursuant to the provisions of the company's charter, the directors beg to present their half-yearly report, which, in accordance with custom, will be confined to the consideration of the traffic operations and financial position of the company. These, the directors are happy to state, are of the most satisfactory character, illustrating a condition of success much in advance of that of any previous period of the company's transactions; and the more gratifying and reliable because resulting chiefly from the local trade of the line, which has continued to improve with a steadiness and rapidity indicative of permanent strength.

In view of the very unsettled condition of the through American trade and of the fluctuations and uncertainty of American finance, the directors felt it their duty to refrain from any contract engagements with steamboat lines for the season of 1863; and although overtures were made for the maintenance of the through Collingwood route, impelled by prudential considerations, as well as by circumstances adversely affecting the negotiations, they preferred to rely upon their local trade until they could again engage with a security for profit in lake connections.

The result has justified this action, for whilst

the company has avoided the dangers of low competitive rates and of the adverse and constantly fluctuating exchange by which those rates have been still further depreciated, the local trade has been so successfully developed and the railway service so much encouraged that the directors are enabled to submit a revenue statement of unqualified value.

The following is an abstract from the return of earnings and expenditure for the half-year ending June 30:—

Earnings and Expenditure for the half-year ending 30th June, 1863.

Through freight traffic.....		$9,131 19
Local " " ...	$159,396 16	
" passenger " ...	45,527 58	
Mail service	1,716 40	
Other sources, local.....	4,164 14	
		$210,804 28
Gross earnings from all services..		$219,935 38
Total expenditure on all services.....		138,783 12
Net revenue for half-year.....		$81,152 26

Thus the net revenue or profit of the half-year has amounted to $81,152 26, whilst the total interest liability of the company being $77,876 40, the directors have been enabled, after making full provision for dividends on the company's bonds, to carry $3,275,86 to the credit of the ensuing half-year.

By reference to appendix No. 2, revenue account, it will be seen that a balance at rest amounting to $36,705 34 now stands to the credit of that account for future distribution.

The proprietors will note with satisfaction that the working expenses of the line have been reduced to 54⅛ per cent. of the earnings, an average much below that heretofore reached by any Canadian railway.

The charges for special services arising from a credit extension for elevators and other works executed in 1861–2 will hereafter be reduced to about half the past disbursements, and early next year this source of outlay will be entirely extinguished and net revenue be so far thereafter benefited.

The directors early in the year instituted a rigid inquiry into the composition of the staff of the company, and were enabled to effect very considerable reductions without impairing the service. Of these reductions the past half-year, productive as it has been, has not yet felt the full benefit, but they will become apparent when the whole year's service shall be under revision.

There are no disturbing causes in any way affecting the operations of the company, which seem to afford full satisfaction to its customers and the public and to give very gratifying promise of a permanent ability for the punctual discharge of its liabilities on its bonds.

The works of the line continue to improve in condition, and it is the policy of the directors so to maintain the railway and extend its facilities for the growing trade of the district as to insure efficiency in the service of the public and permanent credit and profit to the proprietary.

The directors have still to regret the absence of any equitable readjustment of the rates received by the company for postal service.

On reference to the amount received during the past half-year, its insufficiency is palpably evident, showing, as it does, that the mail service of the district, involving nearly 100 miles of railway, is paid for at the rate of about 14*l.* 13*s.* per week. The directors cannot doubt that this injustice will eventually be corrected.

The directors, in recording the resignation of Mr. Beattie, the secretary and treasurer of the company, desire to express in the most sincere and emphatic manner their high appreciation of his long and invaluable services, by which, during a period of depression which threatened to be fatal to the company, he chiefly contributed to its continued operation and the preserving of its credit.

The directors feel that in seeking an early opportunity for giving practical form to these views they will consult and fulfill the wishes of the local proprietary towards an officer who has in their service secured to himself the esteem of the whole community.

JOHN BEVERLEY ROBINSON, *President.*
FRED. CUMBERLAND, *Managing Director.*

Railroad Subscriptions.--Township Bonds.

SUBSCRIPTION OF BROWN TOWNSHIP, OHIO, TO THE SPRINGFIELD, MOUNT VERNON AND PITTSBURG RAILROAD COMPANY. A TOWNSHIP HAS AUTHORITY TO SUBSCRIBE ONLY WHEN THE COUNTY FAILS TO SUBSCRIBE; THE BONDS DECLARED VOID.

The Springfield, Mount Vernon and Pittsburg Railroad was located through Delaware county, Ohio, and Brown township therein. The act incorporating the company was passed March 21, 1851, and it provided as follows:

SEC. 4. The county commissioners of any county through which said railroad may be located shall be and they are hereby, authorized to subscribe to the capital stock of said company any sum not exceeding fifty thousand dollars," etc.

SEC. 5. If the county commissioners of any county through which said road shall pass shall not be authorized by the vote of said county to subscribe stock to said road, the trustees of any township through which said road may be located shall be and they are hereby, authorized to subscribe any sum of money not exceeding fifty thousand dollars to the capital stock of said company, and provide for the payment of said stock in the same manner that the county commissioners aforesaid are authorized; provided that the total amount which may be subscribed to the capital stock of said company by any county, and the township therein, on the line of said road, shall not exceed $100,000.

SEC. 6. No subscription shall be made by the county commissioners of any county, or the trustees of any township, through which said road may be located, until a vote of the qualified voters of such county or township has been declared in favor of such subscription, in the manner pointed out in the mode of proceeding, when county commissioners may be authorized by law to subscribe to the capital stock of railroads &c.

The act of February 28, 1846, imposed a duty upon county commissioners of giving 20 days, notice to the county electors of a voting to thereafter take place for or against a proposed railroad stock subscription.

An act passed March 25, authorized special county elections to determine the question of subscription to the stock of the Springfield Mount Vernon and Pittsburg Railroad Company. The second section provided that "If the commissioners of any of the counties aforesaid shall not be authorized by the vote as aforesaid to subscribe to the capital stock of said company on behalf of their respective counties, then, and in that case, the question of subscription by township trustees, provided for in the said act incorporating said railroad company shall be submitted to the people of the respective townships, at a special election to be called or provided for in the first section of this act.

Under these statues, an election was held June 17, 1851, by the electors of Delaware county to decide the question whether the county commissioners should be authorized to subscribe $50,000 to the stock of the Springfield, Mount Vernon and Pittsburg Railroad Company, and the result of the election was that the county commissioners were authorized by a majority of the votes cast at the election to subscribe said sum to the stock of said company. Subsequently, and on the 4th of August, 1851, the county commissioners subscribed $50,000 to the company stock, and issued their bonds in payment.

On the 17th of July 1851, an election was held by the voters of Brown Township, in said county of Delaware, to decide whether the trustees of the township should be authorized to subscribe for the township, $17,000 to the stock of said company, A majority of voters at this election decided against making the subscription. Subsequently, however, and on the 30th of August 1851, a special election was held by the voters of Brown township, which resulted in the voters authorizing the trustees to subscribe $17,000 to the stock of the company. The township trustees accordingly issued their bonds of indebtedness to the company or to its assigns. Five of these bonds were now owned by one Hopple the assignee of the company who brought this suit against the trustees of Brown township in order to compel them by *mandamus* to levy a tax and pay the amount of the bonds. The question involved was as to the power of the township trustees to issue the bonds, the county commissioners having previously made a subscription of $50,000. The Ohio Supreme Court decide in favor of the defendant, and dismiss the *mandamus*, holding that the Township trustees had no authority to act, and the bonds were therefore void, not being valid even in the hands of *bona fide* holders. The following is that portion of the opinion upon the question of power.

SUTLIFF J.—The only acts of the legislature relating, at all, to the subject are those set forth in the statement of the case. Do those statutes, either of them or when taken together, confer the power.

Upon recurring to the provisions of the several acts, it appears in the first place, that the legislature by the act of Feb. 28, 1846, required the commissioners of any county in this state, whenever thereafter authorized to subscribe to the capital stock of any railroad, etc., to give at least twenty days, notice, in one or more newspapers, etc., to the qualified voters of said county to vote, at the next annual election, to be held in the several townships, and wards, if any there should be, in said county, for or against the subscription; and to subscribe or forbear to subscribe according to the result of such vote being in favor of or opposed to the contemplated subscription.

And by the act of March 21, 1850, incorporating the Springfield and Mansfield Railroad Company, (Springfield, Mount Vernon and Pittsburg Railroad Company,) the county commissioners of any county through which the road should be located, were authorized to subscribe any sum not exceeding $50,000. And the next section provides, that if the commissioners shall not be authorized by the vote of the county to subscribe the stock, &c., the *trustees of any township* through which the road may be located, shall be authorized "to subscribe any sum not exceeding fifty thousand dollars, to the capital stock, and provide for the payment of said stock in the same manner that the county commissioners aforesaid are authorized; provided that the *total amount* which may be subscribed to the capital stock of said company by any county

and the townships therein shall not exceed $100,000." And the next section provides that no subscription shall be made by either the commissioners or trustees until a vote of the qualified voters shall have been declared in favor of the subscription in the manner provided by the act of Feb. 28, 1846. And that as we have seen, requires the vote to be taken upon the notice therein prescribed, at the next annual election to be held in the several townships * * * in said county.

The charter of the company, therefore, only authorized the trustees to subscribe "any sum of money not exceeding $50,000" upon the condition that "the county commissioners * * * shall not be authorized by the vote of the county to subscribe." This is clearly the extent of the power, by the language of the act conferred upon the trustees. And there could be no question of any further power by implication, were it not for the proviso at the end of the section and immediately following the express grant of power.

That the proviso was intended to, and does, in fact restrict the power otherwise conferred, is evident. For in case the county vote should be adverse to a county subscription, in that event each township through which the road should pass, would be authorized, but for the proviso to subscribe $50,000. And in order to restrict the proviso to this sole purpose, and thereby remove all appearance of intention to enlarge the powers of the trustees inconsistent with the previous express grant of their powers, it has been urged that a slight change of words should be made in the reading. It is suggested that, by a liberal rule of interpretation, it might be thus read; "That the total amount that may be subscribed in any county by the townships therein on the line of said road shall not exceed $100,000." The proposed change in the two words indicated is, it is true, only a slight change, and may quite probable thereby make the sentence conform to the intent of the legislature. It might, however, be very properly objected to the proposed change in the reading that it is forbidden by the maxim, "*a verbis legio non est recedendum.*" And it may well be doubted, whether the proposed change of the words is admissible as an exception to the very general and important rule, that statutes are to be read according to the natural import of their language.

But even if the proviso is so read as to give full effect to the words used, there are no words in the proviso removing the express limitation of the powers of the trustees, to the failure of the commissioners being authorized to subscribe. And, as we have seen, the next section of the charter, prohibits both the commissioners and trustees from subscribing until after the vote of the qualified voters at the *annual election* has been declared in favor of such subscription. And inasmuch as no vote, taken at any annual election has ever been declared in favor of such subscription, it is therefore impossible, that by any construction of the proviso, power could have been derived by the trustees of the township under the charter. It is therefore to the act of March 25, 1851, entitled "an act to authorized *special* elections," that we are to look for the powers claimed by the trustees, to have been derived by a *special* election held according to the provision of that act.

But under this act of 1851, it will be perceived that while the county commissioners are authorized without any restrictions to submit the question of subscription, upon due notice, to the qualified voters at a special election, the question of subscription by township trustees is *only* allowed to be submitted to the people of the township at a special election, in case the county commissioners of the county shall *not* be authorized by vote to subscribe. It therefore follows that inasmuch as the county commissioners of Delaware county, in this case *were authorized* by the voters of the county to subscribe and did subscribe to the capital stock of the road, the township trustees were not authorized or empowered by the provisions of the act to submit the question to the people at a special election; since it is so provided, *only* in the case where the county commissioners had *not* been so authorized by the voters.

It appears, therefore, that the special elections so held by the people of Brown township, both on the 17th of July, and on the 30th of August 1851, were neither of them authorized by any existing statute; and the township trustees consequently were not empowered by any statute to subscribe to the capital stock of said company, and provide for the payment of the subscription. The issuing of said bonds by the trustees was therefore without any statutory authority or power on their part as such trustees. * * * * *

Judgment for the defendants.

Construction of Chelsea Suspension Bridge.

At a recent meeting of the Society of Engineers, London, Mr. Geo. Gordon Page read the following paper on this subject:

The Chelsea Suspension Bridge, which has been opened to the public for the last five years, is a bridge remarkable in many respects; and which, in point of design, mode of construction, and economy of cost, presents features of great interest. In the year 1846 an Act of Parliament was obtained, and the necessary funds granted for the construction of this bridge, which forms a communication between Pimlico, Belgravia, and Chelsea on one side of the river, and Battersea Park and the surrounding neighborhood on the other. In addition to the design for the suspension bridge the engineer, Mr. Page, was instructed to prepare, for the consideration of the Metropolitan Improvement Commission, designs both for a bridge of seven arches, faced with stone, and one in cast iron of five arches; but ultimately, the chief Commissioner of her Majesty's Works decided to carry into execution the suspension bridge originally mentioned in the Act.

General Dimensions.—The length of the Chelsea Bridge is 704 feet from face to face of abutments; it consists of a centre opening of 333 feet, with two side openings 166 feet 6 inches each. The piers are 88 feet long, and 19 feet wide, terminating in curved cut-waters; the piers are carried to a height of 7 feet 6 inches above high-water mark; the width of the bridge is 47 feet; the roadway at the centre of the bridge is 24 feet 9 inches above high water, and has a curve of 18 inches rise, commencing at the abutments.—The towers and ornamental castings are of cast iron. The girders and flooring of the platform are of wrought iron.

Of the Abutments.—Too much attention cannot be bestowed on the abutments of a suspension bridge, as on their careful consideration and construction so much depends.

The abutment is the mass of masonry, or in some cases of natural rock, to which the extreme ends of the chains are made fast, and by the weight of which the strain from the chains is resisted.

The principles of the stability of the abutment of a suspension bridge are the same as those of the abutments of an arched bridge, but reversed.

In the former there is a tendency to upset or slide forward instead of backward, as is the case in the latter. The weight or gravity of the abutment should always be sufficient to prevent it from sliding on its base, and its form and dimensions should be sufficient to prevent it from upsetting. The tendency to sliding forward may be considerably lessened by making the base of the abutment, or a portion of it, slope so as to be at right angles, or nearly so, to the resultant of pressure.

Of all parts of a suspension bridge the abutments are the last in which solidity and stability should be sacrificed to motives of economy.

The weight of the abutment should be equal to resisting twice the utmost strain that can be brought upon the chains by dead weight; and the total power of resistance, combining the weight and the tendency of the abutment to slide from the ground on which it stands, should be at least equal to four times the utmost strain that can be brought upon it.

The resistance offered by the adhesion of the abutment to the ground on which it stands, depends entirely upon the nature of that ground, and cannot by any general rule be accurately predetermined.

When piles are used in the foundation they should be driven at an angle approaching as near as possible to the direction of the resultant of pressure.

With regard to the saddles on the abutment, by the aid of which the direction of the chains is changed, it is not always necessary to place rollers under them; but, as they must be capable of sliding to a sufficient extent, other means are sometimes resorted to in bridges of short span, and the saddles are sometimes laid on a bed of asphalted felt.—In large suspension bridges rollers are, however, universally used, to allow for the expansion and contraction of a necessarily large extent of chain.

As it is most important that the chains or wire cables of a suspension bridge should be kept free from rust, the tunnels in the abutment through which the chains pass down to their fastenings are generally constructed of such dimensions as will allow of space for access for the purposes of examination and repair if required.

The abutments of the Chelsea Bridge consist of a mass of brick-work and concrete, measuring at the base 112 feet in length by 56 feet broad, and at the top 100 feet by 46 feet, and 40 feet deep.

The face of the abutment adjoining the river is composed of cast iron piles and plates, somewhat similar to those of the pier, with the exception that the iron work is not brought above the level of low water.

The portion of the abutment on which the land saddles and cradles bear, for changing the directions of the chains, rests upon timber piles, 14 inches square, driven deep into the bed of the river, and are from 3 feet 2 inches to 4 feet from centre to centre. These piles are cut off at the level of low water, 16 feet below Trinity high-water mark, and the spaces between filled up with hydraulic concrete. The cast iron and timber piles are tied together with wrought iron ties, 3 inches by ¾ inch. On the top is bedded a series of landings, forming a table at the level of low water 53 feet 6 inches by 27 feet 6 inches, upon which a mass of brick work is erected up to a mean level of 3 feet below the level of the roadway. Upon this 12-inch landings are bedded for the reception of the cradles which carry the saddles on rollers. The cradles are bedded in asphalted felt, and firmly secured by wrought iron holdingdown bolts, brought up through the masonry from below. An invert, springing from beneath each saddle, is built in the brickwork below, so as distribute equally the pressure from the cradles over the whole area of the foundation.

The mooring chains are carried down tunnels to the moorings, the tunnel forming an angle of 155 degrees with a horizontal line. The chains are secured to massive cast iron mooring plates, resting against three courses of 12-inch landings, respectively 12 feet by 8 feet 9 inches, 16 feet by

12 feet 6 inches, and 20 feet by 16 feet 3 inches. The tunnels are contracted at the bottom by elliptical brick domes, thus affording a complete bearing for that portion of the landings at the end of the tunnel. These landings rest against a mass of brickwork, with inverts, to distribute the pressure over the whole area of the abutment. This mass of brick work rests on a series of timber piles, driven at the angle of 65 degrees with a horizontal line; the tops of the piles coming up above the level of the concrete, struts and ties, and having a good bond with the brickwork, by which means the tendency to slide is greatly diminished, the whole space between the masses of brickwork being filled up solid with concrete.

The Pier Foundations.—The construction of the foundations of the piers combines all the advantages of foundations on bearing piles, made by means of coffer-dams, without the expense and obstruction to the waterways which would have rendered their use at Westminster Bridge all but impracticable.

The foundations of the piers consist of timber bearing piles, 14 ins. square, driven deep into the bed of the river at intervals of 3 feet over the whole area of the pier, varying in depth from 40 feet 6 inches to 25 feet below the level of low-water, according to the resistance offered by the bed of the river.

The face or external surface of the piers consists of a cast iron casing of piles and plates driven alternately. The main piles are 12 ins. in diameter and 27 feet long, with longitudinal grooves on each side for the reception of the plates. These piles are driven to a uniform depth of 25 feet below the level of low water, and between them are driven cast iron plates or sheeting 7 feet two inches wide, so that the pier is entirely cased from the foundations to the top, which is 7 feet 6 inches above Trinity datum. The space inclosed by this casing is then dredged to the hard gravel above the clay, and filled in solid with concrete up to the level of the timber piles. On this foundation a flooring of stone landings is bedded, and on this the cast iron plates, frames, etc., forming the base of the towers, are placed.

The portion of the caisson situate above low water is hollow, being so formed to avoid throwing useless weight on the foundation, and is merely lined with brick work, strengthened by cross walls and iron ties.

The whole of the iron work below the water was covered when hot with a protecting coat of tar. The thickness of metal in the caisson is 1 inch.

Of the Towers.—The towers which support the chains are entirely independent of the ornamental cast iron casing surrounding them, and consist of a cast iron columnar framing strongly braced both horizontally and vertically, carried to a height of 57 feet above high water.

The columns are cast in pairs and have a diameter of 10 inches, and thickness of metal 1 inch. They are arranged in clusters of fours, and the whole are connected with six horizontal frames, occurring at intervals. The columns are not vertical, but incline towards each other upwards from either side of the columnar framing being 13 feet 6 inches at the base, and 9 feet 9 inches at the top. In the direction of the piers the columns are 4 feet 8 inches apart, and rise parallel to each other. There are two towers on each pier, 32 feet from centre to centre. The pressure from the chains coming directly from their centre, each tower carries therefore one-fourth of the whole weight of the bridge, or about 375 tons, or about 670 tons when the bridge is completely loaded: the sectional area of the columns is 284 square inches, and there is, therefore, a pressure upon them when the bridge is loaded, of 2.36 tons per square inch of section. The weight of the towers, exclusive of the ornamental cast iron casing, is 350 tons.

On the towers are fixed massive cast iron cradles upon which the saddles rest.

Of the Platform and Roadway.—The roadway platform is carried by two longitudinal trellis girders, running the whole length of the bridge from abutment to abutment, immediately beneath the chains, by which they are supported at intervals of eight feet. These girders are suspended from the chains by wrought iron rods 2 inches in diameter.

The weight of the roadway is distributed over the whole of the four chains by the coupling plates to which the rods are attached; the rods are jointed at the chains and at the roadway to accommodate any lateral motion that may occur, and are provided with screw coupling-boxes for their adjustment; the suspension rods pass through the longitudinal trellis girders, and support them from beneath.

The transverse girders which support the roadway are placed 8 feet apart from centre to centre, immediately under the suspension rods, and bear upon the bottom flanch of the longitudinal girders; are 31 ft. 10 inches long, 2 feet 2¾ inches deep at the centre, and 1 foot 11 ins. at the ends, where they are connected by a system of riveting with cantilevers 7 feet long, which practically form a continuation of them, and serve to support the overhanging footpaths; the sectional area of the top and bottom flanches is 10 inches, and the vertical rib ¼ inch thick, stiffened with T iron.

The small roadway bearers between the transverse girders are from 3 feet 3 inches to 3 feet 10 inches apart, 8 feet long, and vary in depth from 1 foot 5¾ inches to 1 foot 9½ inches, to suit the cambered surface of the roadway.

The several girders that support the roadway thus form a series of rectangular cells, which are covered with arched plates of wrought iron, stiffened with angle iron.

The haunches of the plates are filled in with a light concrete, composed of cork and bitumen. Previous to laying the bitumen concrete, the plates and girders are coated with asphalte.

The roadway is paved with oak blocks, 6 inches by 3 inches by 4 inches, bedded in bitumen, and trams of timber, flush with the roadway, with wrought iron strips bolted down on the top for durability.

The preference was given to the cork and bitumen concrete as a bedding for the roadway blocks, on account of lightness compared with ordinary concrete. Concrete, moreover, in such a position, and in so thin a layer, is liable to crack, and become in time pulverized, and (then no better than loose gravel) liable to be deranged by passing traffic.

The footpaths are paved in the same way, only the blocks are of smaller dimensions. This pavement rests on planking placed on joists running longitudinally, resting on the cantilevers. The available breadth of the carriage-way is 29 feet, and footpaths 14 feet 4 inches.

The longitudinal trellis girder is 6 feet deep, and its flanches are composed of a top plate 10 inches by 1¼ inch, and two angle irons, 3½ ins. by 3½ inches by ⅜ inch thick; the effective area of the top and bottom flanches is 12½ square inches.

This girder materially stiffens the roadway, and prevents, in a great degree, that undulation to which suspension bridges are liable.

The handrail is of wrought iron, secured to the cantilevers at every 8 feet by brackets. The ornamental bosses and stays for supporting the railing are of cast iron.

(To be continued.)

Carbondale and Scranton Railroad.

Tuesday of this week was signalized by the opening up of the extension of the Delaware and Hudson Canal Company's Railroad line from Providence to Scranton. On that morning passenger cars entered Scranton for the first time direct from Carbondale. Now the two largest towns of the Lackawanna valley, and in population the two largest in the county, are connected by rails. It will greatly facilitate travel and intercourse between the two places and aid in producing an identity of interest. It is a great desideratum for our own town, as, in addition to a connection with Scranton, we are at the same time fully connected with the rest of the world.—*Carbondale Advance, Sept. 12th.*

The Crops in the West.

THE CROP REPORT—SHOWING THE EFFECT OF THE RECENT FROST IN THE NORTHWEST.

We print below reports from one hundred and twenty-six different points in the State of Illinois, Indiana, Wisconsin, Iowa and Minnesota, furnishing reliable information as to the effects of the recent frost upon the crops in the Northwest. Circulars were addressed to each, with accompanying blanks for a full report from each locality, which were returned promptly. The letters are from business men well known and reliable in their own localities, and thus the sources from which the present voluminous information relative to the prospect for the fall crops for 1863 in these five Northwestern States are of the very highest order.

An investigation of these returns shows them to constitute a mass of information of great value to the business public, as well as to the agricultural interest of the country, forming, as they do, the most complete general report yet collected of the extent and destructiveness of the great frost. We deduce from them some important and interesting general facts.

1. That throughout the wide territory covered by the information, crops on low and flat ground suffered most, in many cases being damaged fifty to seventy five per cent, while crops on high or rolling ground escaped almost entirely, or with slight injury.

2. That the frost "ran in streaks," some localities suffering severely, while others, only a few miles distant, suffered but little.

3. That the great "frost belt," so to speak, embraced an area abont two degrees in width, extending from the Mississippi eastward into Indiana, as far as the information goes. This frost belt lies between the fortieth and forty-second degrees of latitude, the line of Chicago forming the northern limit and the line of Decatur and Springfield the southern limit. Within these limits (excepting the region west of the Mississippi river) the damage to crops and vines appears, from all the reports, to be no less than fifty per cent, while beyond these limits, either north or south, the effects of the frost seem to have been much lighter. Thus, through the southern and central tiers of counties in Wisconsin and the most northern tier in Illinois, the reports show an average damage of not more than twenty five per cent., while south of the line of Decatur the general injury was comparatively slight. This remarkable circumstance may be in part accounted for by the fact that north of forty-two degrees less of the peculiar kind of crops are raised which have suffered so much south of that line; but the reports show the same relative difference in respect to corn, a crop which is grown throughout the whole region.

4. That west of the Mississippi river the frost was not so severe in the same latitude as it was east of that stream.

5. That the general average of injury to crops in the West is less than reports previously published have shown. In the whole region covered by these reports, the average damage to corn, sorghum, tobacco, and other crops peculiar to the different localities (except buckwheat) does not seem to exceed twenty-five per cent.

6. That the new or experimental crops of sorghum, tobacco, and cotton have not suffered to any greater extent in proportion than the old crops of corn, buckwheat and others. Sorghum seems to have suffered almost exactly in the same ratio as corn and no more. Tobacco did not stand the frost quite so well, but did better than buckwheat, which was almost everywhere killed dead. Cotton in some localities was killed, but the fact only proves that the cotton region cannot be extended northward indefinitely. As far south as Jonesboro it was not killed, and but slightly, if at all, injured. Upon the whole, the facts go far to prove that cotton, in ordinary seasons, will be a safe crop in the extreme southern counties in Illinois, while the

new product, sorghum, is established more firmly than ever among the great agricultural staples of the West.—*Chicago Post.*

The Franking Privilege.

There would seem to be a determination on the part of a class of correspondents not to understand the requirements of the postal act of last March respecting the franking privilege and the forms to be observed in addressing matter entitled by law to pass free in the mails.

First—No private citizen, high or low, can send a letter or document of any kind, or any other thing, to any officer or public man at Washington or elsewhere, (excepting to members of the United States Senate and House of Representatives, the Secretary of the Senate and Clerk of the House of Representatives,) without prepaying the full postage thereon, whether such matter is upon official business or otherwise. He must prepay letters to the President of the United States, his Cabinet officers and all others in public stations with the above exceptions. The franking privilege of members of Congress has not been materially changed, and covers all correspondence to and from them as heretofore.

Second—All persons employed in the Government service may send official letters free to the department at Washington with which they are officially connected, and to no other department, provided they write or print the words "official business" on the envelope of the letter, and also sign their name and official designation thereto. If these words and signature, or either of them, be omitted, such letters must be sent to the Dead Letter Office, which, we regret to say, happens daily in all large post offices. Some of these unlucky missives and parcels are addressed to President Lincoln, the Secretary of the Navy, Secretary of War, Adjutant General, Quartermaster General, and other high officials. No doubt some of them are written by private citizens, (who, it has already been shown, must prepay everything they mail,) and others by public officers, who from ignorance of the law or carelessness, do not comply with the prescribed modes of franking, or fail to confine their use of the frank to their own departments. An officer of the army, for instance, cannot send free to the Navy Department, nor a Postmaster to the Treasury Department.

The publication of the above information has the authority of the Postmaster General.—*U. S. Mail.*

Railroad Movements.

The war seems to have increased not only the receipts of our railroads, but to have given a new impulse to the whole system. In the West and North-west new routes are constantly being projected and established. We learn that the great trunk lines through Iowa are pushing slowly forward toward the Missouri. There are three of these principal lines, the Burlington and Missouri River, the Davenport and Missouri River, and the Clinton and Missouri River. They are, in a measure, competing lines, but still so far apart and through such productive sections, that each will have all it can do in the local or way business when the agricultural resources of Iowa are fully developed. Ex-Senator Green, of Missouri, Hon. C. A. Warren, of Quincy, and other parties, are engaged in constructing a road from Naples, on the Illinois River, to Hannibal, or rather a point opposite, on the Mississippi, a distance of forty-five miles, to connect the Great West road from Toledo with the Hannibal and St. Joseph by an almost air-line. They take the franchises and the road bed of the old Pike County Company, which had graded the track, built most of the bridges, &c.

The Minnesota roads, after much delay, and encountering many difficulties, are now being pushed forward with considerable rapidity. The project of a road from a point on the Illinois Central, at Warren, Illinois, to La Crosse, Wisconsin, one hundred and twenty miles, nearly along the eastern bank of the Mississippi, is to be carried out for the benefit of Chicago interests, as it will tap all Western Wisconsin. Good progress has been made upon the Green Bay and Lake Superior road. Next year the cars will be running on that line, if it meets with no unusual obstacles. This is regarded as a Chicago enterprise. The Pacific Railroad of Missouri is again entered upon. The contractors advertise for a large number of laborers, and the work has actually commenced.

The vigorous progress made in the construction of the Cedar Valley Railroad from Mendota to Owatona, and of the Winona and St. Peter road from that point to Winona, gives augury of a speedy all-rail route to Milwaukee, by the completion of the proposed road from Winona to Sparta, Wis., (on the La Crosse road.) In two years between St. Paul and Milwaukee there will be but one change of cars, at Winona.

☞ The income paid the Government from the Pennsylvania Oil Wells reaches $5,000,000 per year.

Railroad Earnings—Monthly.

Total	$404,898 11	$277,380 41
Increase		$127,517 70
Earnings from Jan. 1 to August 31	$3,207,069 66	$2,201,267 84
Increase for 8 months		$995,801 82

Increase for August, 46 per cent.; increase to August 31, 45¼ per cent.

The earnings of the Milwaukee and Prairie du Chien Railroad for August, were:

	1863.	1862.
Freight	$39,102 07	$46,103 35
Passengers	26,331 13	25,799 09
Mails and rents	3,919 33	4,260 36
Total	$69,352 53	$76,162 80
Decrease	6,810 27	
Total for eight months	$635,530 74	$715,597 24
Decrease do.	80,066 50	

The Chicago and Rock Island Railroad earned in August, 1863 ..... $151,865 00
Do., 1862 ..... 117,086 00

Increase $34,779 00

The earnings of the Chicago and Alton Railroad for August, were:

	1863.	1862.
Passengers	$56,989 36	$41,860 54
Freight	106,557 08	71,407 61
Miscellaneous	4,419 36	3,914 43
Total	$167,965 80	$117,182 58
Increase	$50,783 22	

The Joliet road proportion is included for both years.

The earnings of the Cleveland and Toledo Railroad in August, 1863, were $102,130 00
Do., 1862 ..... 78,538 00

Increase $23,592 00

Railroad Earnings--Weekly.

The following is a comparative statement of the earnings of the Chicago and Rock Island railroad for the first three weeks in September, 1863 and 1862:

	First Week.	Second Week.	Third Week.
1863	$53,637	$48,738	$56,419
1862	35,211	30,767	34,836
Increase	$18,426	$17,971	$21,583

—making the aggregate earnings in the first three weeks of September, 1863, $158,794, against $100,814 in the corresponding period of the previous year—an increase of $57,980.

The following is a comparative statement of the earnings of the St. Louis, Alton and Chicago railroad for the first three weeks of 1863 and 1862:

	First Week.	Second Week.	Third Week.
1863	$29.446	$33,283	$31,821
1862	20,276	22,544	21,360
Increase	$9,170	$10,739	$10,460

The following is a comparative statement of the earnings of the Toledo and Wabash railroad for the first three weeks in September, 1862 and 1863:

	First Week.	Second Week.	Third Week.
1862	$39,355 65	$39,192 30	$40,477 93
1863	26,424 58	28,340 94	27,675 25
Decr'se.	$12,931 07	$10,851 36	$12,802 68

The earnings of the Grand Trunk Railway for the week ending September 12, 1863, were:

Passengers	$33,556 10
Freight and live stock	47,471 20
Mails and sundries	3,000 00
Total	$84,021 30
Corresponding week, 1862	63,027 64
Increase	$20,999 66

The traffic of the Great Western Railroad for the week ending Sept. 18, 1863, was as follows:

Passengers	$30,086 23
Freight and live stock	29,957 44
Mails and sundries	1,251 43
Total	$61,295 10
Corresponding week of 1862	55,658 07
Increase	$5,637 03

The earnings of the Michigan Central Railroad for the 3d week of Sept., 1863, were $66,915 00
Same period, 1862 ..... 59,245 00

Increase $7,670 00

The approximate earnings of the Marietta and Cincinnati Railroad, in the 3d week of September, 1863, were $16,088 57
Do., 1862 ..... 9,460 28

Increase $6,628 29
Total for 3 weeks of Sept., 1863 ..... $47,879 93
" " " 1862 ..... 29,291 81

Increase $18,588 12
Total since commencement of fiscal year, July 1, 1863 ..... $159,448 51
1862 ..... 123,249 37

Increase $36,209 14

The earnings of the Milwaukee and Prairie du Chien Railroad for the 3d week in Sept. have been $37,260 02
Same week, 1862 ..... 25,824 97

Increase $11,435 05
Total for first 3 weeks in Sept., 1863 ..... $96,335 31
" " " " 1862 ..... 73,530 61

Increase $22,804 70

The earnings of the Chicago and Alton Railroad for the 3d week of September, 1863, were:

Passengers	$15,412 20
Freight	29,893 09
Sundries	1,120 23
Total	$46,425 52
Same week last year	35,915 57
Increase	$10,509 95

Joliet road proportion is included for both years.

The earnings of the Galena and Chicago Union Railroad for the 3d week of Sept., 1863, were:

Freight	$50,964 78
Passengers	12,326 09
Mails	1,300 00
Total	$64,590 87
Same week, 1862	39,400 02
Increase	$25,190 85

The earnings of the Chicago and Northwestern Railway for the 3d week in September, 1863, were $40,685 90
Do., 1862 ..... 21,733 66

Increase $18,952 24

The earnings of the Cleveland and Toledo Railroad for the 3d week of September, 1863, were $34,028 00
Same week, 1862 ..... 26,873 00

Increase $7,155 00

The earnings of the Michigan Southern and Northern Indiana Railroad for the 3d week of Sept., 1863, were $64,986 00
Do., 1862 ..... 60,302 00

Increase $4,684 00

Validity of "Legal Tender Notes."

The Court of Appeals, at the opening of the session this morning, announced its decision in the cases involving the validity of the notes issued by the National Government as a "*legal tender*" in the redemption of the circulating notes of State Banks, and in the payment of obligations arising on contracts.

In the case of The Metropolitan Bank and others, respondents, agt. H. H. Van Dyck, appellant, the judgment of the Supreme Court of this District (which was in favor of "legal tender") was *affirmed*; while that of the Supreme Court of New York, in the Rosevelt case, was *reversed*.

In the former case, the question involved was whether "legal tender notes" were equivalent to specie under the Constitution and laws of this State, in the redemption of bank notes by the institutions issuing the same. In the other case, the question arose on the reception of "legal tender" in discharge of a mortgage executed before the enactment of the law of Congress authorizing the issue of such legal tender notes by the General Government.

Judges Davies, Wright, Balcom and Marvin also delivered opinions, in one or the other of the two cases, sustaining the validity of the legal tender clause, in which Judge Rosekrans concurred. Chief Judge Denio delivered a contrary opinion, and Judge Selden also dissented.—*Albany Evening Journal, Sept.* 29.

American Railroad Journal

Saturday, October 3, 1863.

☞ The *postage* on the AMERICAN RAILROAD JOURNAL is only *twenty cents per annum*, payable *quarterly in advance* at the Post office where the paper is received.

Stock Exchange and Money Market.

The advance in gold is again attracting attention. Various reasons are assigned for the fact, such as the large demand for it by the importers to meet their payments at the Custom House; also a demand for considerable quantities by the newly organized National Banks. The exports of specie have been comparatively small for some weeks past. It is the opinion of many sound merchants that the Secretary of the Treasury, having accumulations of the article far beyond his need for the payment of interest, should step in and let down the price. His receipts in the month of August were about eight millions from Custom dues.

His payments of interest will not average more than three millions per month. If this estimate be correct, he has a large surplus, and by a sale of some of his coin, he would not only steady the market, but would keep his Treasury notes nearer the par of gold, and reduce the prices of those commodities which are again rising under the comparative inflation of the paper currency. The practical effect of such a movement would be as follows: On five millions of gold, he would realize for the Government say, at the prices of Tuesday, at least two millions of dollars in greenbacks, with which he could pay off a whole division and more of the troops, or enable the Secretary of the Navy to send to sea several new iron clads like the *Ironsides*. If he wants two millions for any other national purpose, he can in this way easily obtain them without resorting to a loan. After the market was supplied, the price would fall at least 15 or 20 per cent., and he could buy in again if there was any necessity for it. The prices of foreign goods, which go up at every rise in gold, would be lowered to consumers, and a great relief afforded them; while at the same time the Government would save a large sum in their contracts for supplies. The objections made to the proposition appear to be these: That the Government should not play the part of a broker. But it does so already, when it comes into the street for a loan and haggles at the offers; also when it borrows gold from the banks at a rate of interest under the market price; so again, when it receives money in deposit. All these are the functional operations of banks and brokers; yet no one disputes the right of the Government to go into them, or its sagacity in doing so.

It is also said, there is no authority for the procedure. But there is no legal prohibition of it. The Government is the only party in the country which can demand gold, and therefore of necessity the only one which gets it at par. To accumulate it at the expense of all private interests is to use its powers unfairly. It holds in its keeping the only common standard of value, and should be careful not to absorb it to an unnecessary extent. We believe it is as perfectly within the power of the Secretary of the Treasury to part with his gold for the national advantage, as to make a temporary loan. Half the business of the Custom House is now transacted under Treasury orders, which are made, modified and repealed from time to time according to exigencies. At all events, if there be no legal obstacle in the way, we imagine Mr. Chase ought at once to take the step proposed, and let it be understood, that he would openly place in the market, from time to time, his surplus deposits of gold. It would give great stability and confidence to the holders of Treasury notes, ease the importers, and bring down prices of imported articles. The public would understand the object, a good and a patriotic one, and would support him in the measure. Our own opinions are also those of our most intelligent bankers, and we recommend them to the consideration of the Secretary, who looks with a friendly eye on everything by which the public interest may be served.

Much of the anxiety felt as to the condition of our foreign relations has worn off within the last few days, in consequence of the intelligence received from abroad. The market is therefore relieved of any pressure by the fear of intervention. We have the best opportunity for knowing, and the best possible grounds for asserting, that our own Government has received positive assurances that the French Emperor has no intention of recognizing the confederates, whatever he might have thought of doing some months since. More than this, he deprecates the action of our Government in opposition to his Mexican schemes, and is attempting to show that he really means nothing but to offer the Mexicans a stable Government, which will be of no injury to the United States.

And as regards the English Government, we also are assured, on the best authority, that it has at last revised its policy, if not its law, in relation to the fitting out of armed vessels in its ports to prey upon our Commerce. The ancients had among their Deities in the class of infernals, one called Nemesis. She was the Goddess of Vengeance, always prepared to punish wrong, with a certain retributive power at her command from which no bad person could escape. She is represented with a helm and a wheel. To her, sacrifices were always offered by the Romans before going to war against their enemies, by which they showed the world, they did so only for the most just cause.

This Nemesis is still invoked, figuratively it is true, but as a principle which yet exists in the Government of the world; and it is of Nemesis, the British Government are now afraid. It is evident that the conduct it has observed in its license to the confederates will by-and-bye be turned against itself. The helm and wheel which stand admirably for an illustration of the future, show what well armed steamers may do when the day comes for retributive justice; and British commerce may learn their power, observe their direction and deprecate their speed. We therefore note the change in the temper of the British Ministry recently, most markedly seen in the late speech of Lord Russell, at Dundee, than which nothing could be more frank or positive. In connection with this subject we cannot overlook the extraordinary naval demonstrators in our port. A large Russian fleet is here to spend the winter months, where it cannot be frozen in, nor surprised. A respectable English squadron has also arrived, and one or two French gunboats have made their appearance. We look on this remarkable occurrence as evidence of anything but hostility; on the contrary it is an evidence, on the part of Russia, of a most friendly interest, and of the French and English, of a desire to maintain the usual relations. Had they all assembled in a Confederate port, it would have been of no such import, but the contrary. We may, therefore, consider the arrival of these foreign ships, an evidence of the convictions of their respective countries, of the approaching termination of the conflict, and a mark of deference to the superior cause.

On Wednesday, the Sub-Treasury disbursed about three millions of gold as payment of interest on the 7.30s and on the 1st of November will disburse about $6,500,000 in the same manner on account of interest on the 5–20's. Thus nearly ten millions will have been paid out in about thirty days, and this sum thrown upon the market must produce a decline, for the dealers in the article will not be able to hold so large a sum at the present advance. The loss of interest on that amount, if held for future speculation, will be too great to justify the attempt. There is a fresh activity in the stock market with an improvement. Money is easy again at the previous rates. The decision of the Court of Appeals, by a vote of 6 to 2, has finally settled the vexed question as to the constitutionality of the legal tender notes.

The conduct of the Directors of the Michigan Southern of which we have spoken in another place, has been impeached at the Public Board of Brokers, though acquiesced in at the regular board. The subscriptions to the popular loan in this market continue large. On Tuesday the conversions were $802,950. The balance in the Sub-treasury is about $25,829,472 63. The exports from this port for the week ending Tuesday, exclusive of specie were $3,298,900, against $3,870,460 in 1862, and $3,042,333 in 1861.

The Cleveland and Toledo Railroad Company have declared a half-yearly dividend of 4 per cent., payable October 26.

The Panama Railroad Company has declared a dividend (twenty-seventh) of three per cent. out of the earnings of the road, and 1 per cent. out of the earnings of steamers, etc., for the three months ending 30th ult., payable on the 5th of October.

The coupons upon the first mortgage bonds of the Ohio and Pennsylvania divisions of the Atlantic and Great Western Railroad Company, due October 1, will be paid at the office of the agents, McAndrew & Wann, No. 12 Pine street.

The coupons of the first mortgage bonds of the St. Louis, Alton and Terre Haute Railroad Company, due Oct. 1, 1863, will be paid at the Bank of North America.

Winslow, Lanier & Co. will pay, less the interest, the coupons on the Dollar Bonds of the Marietta and Cincinnati Railroad Company due Feb. 1, 1864.

The coupons upon the bonds of the New York and New Haven Railroad Company, due October 1, will be paid either at the office of the company or the Bank of the Republic.

The interest due October 1, 1863, on the bonds of the Syracuse, Binghamton and New York Railroad Company will be paid at Continental Bank, New York, on presentation of coupons.

A quarterly dividend of 2½ per cent. has been declared on the capital stock of the Beaver Meadow Railroad and Coal Company, payable on and after October 7th.

The Philadelphia, Germantown and Norristown Railroad Company have declared a semi-annual dividend of four per cent clear of taxes, payable October 1.

The Camden and Amboy Railroad Company pay interest on the 1st inst., on its bonds of 1867 and 1875, the Pennsylvania Railroad Co., on its 2d mortgage, the Sunbury and Erie Railroad Co. on its 7 per cents, the Morris Canal Co., on its 1st and 2d mortgage bonds, the Reading Railroad Co. on its bonds of 1870, the North Pensylvania Railroad Co. on its 10 per cents., the Philadelphia and Erie Railroad Co. on its 6 per cents., the Lehigh Coal and Navigation Co. a quarterly interest of 1½ per cent.

The Cambridge horse railroad company has declared a dividend of 4½ per cent., payable Oct. 1.

The Chelsea horse railroad company has declared 4 per cent. on its preferred stock, payable Oct. 5.

Chicago and Rock Island Railroad.

By a transposition of the figures in the statement of the earnings of the Chicago and Rock Island Railroad for the second week in September, as given in our last issue, it was difficult to decide whether there had been an increase or decrease as compared with the corresponding period of the previous year. We are thankful to a friend for calling our attention to the error. In the present issue they are given correctly, together with those for the first and third weeks in September 1863 and 1862, by which it will be seen that the aggregate increase in the earnings of the past three weeks, have exceeded those of the corresponding three weeks in September, 1862, by $57,980. For the month of August, 1863, the approximate earnings were $151,865, against $117,086 in August 1862—an increase of $34,779. For the five months of the current fiscal year, April to August, inclusive, the gross earnings have been $735,496, against $554,218 for the same months of 1862—being an increase of $181,278. This rate of increase, if continued during the remaining seven months of the fiscal year, will swell the gross earnings to near *two millions of dollars*. From present appearances the earnings for September will be upwards of $200,000, or more than $50,000 in excess of those for September, 1862.

Michigan Southern and Northern Indiana Railroad.

The recent conversion of $1,500,000 of the bonds of this company into the common stock, caused quite a sensation at the stock board, and some anxiety among the stockholders. A committee of the former was appointed to inquire into the character of the transaction, but this subject, after due consideration was laid on the table.

We imagine that the operation was really a good one for the stockholders, though not so pleasant to dealers in the stock. It is in fact reducing the debt of the company *a million and a half*, and retaining the amount of interest, to wit., $105,000, to be paid as dividends on the share capital.

It appears the Directors had, under the charter, the right of making this conversion, and that the bonds were sold or converted at a time when the stock was selling at 108 and above. It has since fallen in consequence of this operation to about 77. The legal question being without dispute, a moral one arises, whether this conversion was not made secretly and with a design on the street, or in favor of those persons connected with the direction who were short. This idea has prevailed to a considerable extent, but the Directors disclaim any such object. At any rate, it is to be hoped that the profit made on the transaction, which at 8 per cent. would be $120,000, has gone, or will go, into the pockets of the stockholders.

Enlargement of the Champlain Canal.

A convention was recently held and well attended at Whitehall, to press the subject of the enlargement of the Champlain Canal. Committees were appointed to bring the subject before the Legislature. The convention is to re-assemble in Troy on the 15th inst. We hope it will take up the subject of the ship canal, which if properly supported by the press can be made a success.

Our Iron Mines.—Their Present and Probable Future Yield.

The universal employment of iron in all branches of manufactures, is such as to make the capacity for its production a pretty accurate measure of a states prosperity. Given a country having within its borders available mines of iron ore, contiguous to mines of coal, and limestone and there results a state capable of immense development in mechanical industries. According to the best estimates the total value of our domestic manufactures, during the year ending June 1, 1860, was nineteen hundred millions of dollars. What proportion of this annual product is exclusively due to the increased facilities, arising from the employment of iron is of course impossible for us to determine. But a simple comprehension of this immense sum total, is sufficient to make evident our first proposition. The proportion of iron used in the manufacture of machinery is increasing every year; and every year it is applied to some new purpose. A few years ago, no man would have dreamed of its being possible to build an iron house. now we build both iron houses, and iron ships. In small machines, the uses to which it is applied multiply more rapidly, and while the demand for iron is increased, the machines themselves when put in use, swell the product of the country's manufactures. The sewing machine trade illustrates this truth; and is a familiar example to all.

The amount of iron ore contained within the boundaries of the United States, and remaining undeveloped within its mines is, of course, beyond calculation. We know that we possess the ore in the same condition, and equally abundant as in the most favored foreign localities. But to estimate the amount of iron contained in the unworked, or undeveloped mines of our country is simply impossible. There are iron mines of greater or less extent in about every State in the Union. Commencing in New Hampshire and running through Vermont, Massachusetts, Connecticut, New York, Virginia, Pennsylvania, New Jersey, Maryland, Tennessee, Kentucky and Missouri—and again in Michigan and Wisconsin, the mines of ore are croping out and being worked with greater or less success according to the local facilities, and the quality of the ore. But, in order to be valuable, iron mines like any other property, must first be made available. They may extend for miles beneath the surface of the earth, and yet avail us nothing. The ore must be exhumed and then reduced by fire, before it can be made valuable as

an article of commerce. It follows therefore that the true test of our actual or present mining wealth, is in the sum total of the annual yield of all our mines.

The census of 1860, shows that the amount of pig iron produced in the United States during the year ending June 1, 1860, was 884,474 tons, amounting in value to $19,487,790. The value of pig iron produced in 1850, was $13,491,898. This shows an increase equal to about $6,000,000, or 44.4 per cent. Of this quantity Pennsylvania produced 553,560 tons. Ohio produced the next largest quantity, to wit., 94,647 tons; and New York the next, to wit., 63,145 tons. Maryland produced 30,500 tons, Kentucky 23,360 tons, Missouri 22,000 tons, Tennessee 18,417 tons, and Massachusetts 13,700 tons. The total quantity of Bar and other Rolled Iron made during the same period was 406,298 tons, or in value $22,248,796. The total value of this kind of iron made in 1850 was $15,938,786. This shows an increase in value of $6,310,010, or 39.5 per cent. Of this iron, Pennsylvania made 259,709 tons. New York made the next largest quantity to wit., 38,275 tons. New Jersey the next, to wit., 25,006 tons, and Massachusetts the next, to wit., 20,285 tons. Maryland produced 7,000 tons, Kentucky 6,200 tons, Tennessee 5,024 tons, Ohio 10,439 tons, and Missouri 4,678 tons. Pennsylvania made 62.5 per cent of the quantity, and 58.6 per cent of the value of the whole production. The number of tons of ore mined was 2,514,282.

We submit that these figures are encouraging. We cannot say that we annually produce as many tons of pig iron as England, for England produces $3,000,000 tons per year, an amount as large as the total quantities produced in all other countries. But we produce more than any other country, with the exception of England, and at the present time we are probably producing one-third of the quantity produced in England.

Nor should the fact that England excels us in this respect be viewed with envy or discouragement. It is to be remembered that England is exclusively a manufacture and commercial nation. She has but two avenues into which she can direct the industry of her people, the one is mechanical the other is commercial. She raises no cotton and but little grain. We on the contrary are agricultural as well as mechanical and commercial; and when we attempt to compete with her in one of her departments, we must remember that our other departments of industry must advance with an equal ratio. At the present time we are carrying on all of our usual industries; we are engaged in the greatest war of modern times; and for two years past we have been feeding the people of Europe from our Western graneries. Surely this is all that any one can ask of a nation not yet a century old.

A few weeks since we happened to be on the deck of a Hudson River Steamboat, when opposite Poughkeepsie. The iron works located there were in full blast, and the light from the furnaces shone for miles on the river both above and below. The night was otherwise dark, and the contrast vivid. We could not help thinking what an effect that iron furnace was having upon the future destinies of the American People. An iron foundation was being laid, and upon it a light will arise far more brilliant than that which shone upon the water, which will be reflected for ages to come upon our nation, and our nation's children. The age of iron is an age of strength and of intelligence. We believe our future will be an iron age.

The Issue of National Money.--How it Effects our Prosperity.

For two years past the Federal Government has been making and issuing its own money. The object has been to meet the expenditures made necessary by the war. With the object however, we have nothing to do, the money has been actually issued, and we propose to consider, merely, its effects upon our national prosperity.

The first issue of Treasury notes was made receivable by the Government for duties on imports; this issue we understand has mostly been returned to the Treasury and destroyed. Subsequently the present legal tender notes were created; these very soon displaced the ordinary bank bills, and they are now used in the majority of domestic payments. The Government is now issuing bonds, the principal and interest of which are payable in gold, and receiving in exchange the legal tender notes at par, to be again issued as the wants of the Treasury may require. The sum total of these bonds constitutes our permanent national debt.

Mr. A. B. Johnson of Utica, a man of acknowledged financial ability, in remarking upon our national debt says:

"The stock requires for its continued vitality, that the Government shall annually exact from the people, by taxes, the interest which is payable on the stock; and this exaction constitutes the only practical difference between stock and gold; consequently, the annual benefit or injury which a country will sustain by reason of such a stock, will depend on whether the benefit is more or less than the interest abstracted annually from the country in the taxes which the stock occasions."

In answer to this quere he says:

"We know that capital is ordinarily borrowed with avidity, and interest paid thereon as a means of pecuniary gain to the borrower, and hence we may well conclude that the aggregate which the public gain, by means of capital created by Government loans, exceeds the annual taxes necessary for the continued vitality of the Government debt. But this fundamental fact rests on more than the inference just adduced; it being seen practically in the increased activity and general prosperity which always attend what is technically termed an inflation of the currency of a country, the inflation being only a consequence of the ability of all men to obtain loans to the extent that good security can be given therefor. No limit, indeed, but the limit of capital obtainable, exists to the industrial operations of any country. As a general rule, every man is active to the extent of the capital he can command, and the activity is induced by its expected pecuniary productiveness to the actor. The only evils attendant on currency inflations are the uncertainty and usual briefness of their continuance; but such evils are not attendant on increased capital by Government loans, they being of permanent duration."

We can comprehend the effect of the creation of a large national debt better, perhaps, if we first consider the natural course, or employment of capital in ordinary times. For convenience of illustration we divide the community into three classes. First, there are the capitalists, who live by lending their money to others and taking security for its repayment. Second, there are those who live by employing capital in business operations, paying the capitalist a per centage upon the money loaned, and from the surplus gaining their own livelihood. And third, there are the men who live by the labor merely of their heads or their hands, receiving a certain definite sum of money as a compensation.

In a financial point of view the capitalist is the natural antagonist of the borrower. It is his object to lend or invest his money where it will be secure, and where it will pay him the highest rate of interest. The borrower, on the contrary, desires to obtain money at the lowest possible rate of interest, in order that his own profits may be enhanced. Just in proportion as the per centage of money demanded for its use increases, the number of borrowers decrease, and trade is made dull; and just in proportion as the rate demanded decreases the number of borrowers increase and trade is made brisk. When there are "good times" men pass in great numbers from the third rank to the second; and when there are "bad times" they pass in equal numbers from the second rank to the third, and some pass from the first to the second or even to the third rank.

In ordinary times the tendency of money is to concentration in the hands of capitalists. The reason of this is that the capitalist always lends his money upon a security, which if the borrower fails, is yet sufficient to cover his own loss. The borrower runs the risk of the investment being profitable—not the lender. If it turns out well, both parties are benefitted, if it turns out badly, the borrower loses, and the capitalist resorts to his security. In proportion as a business investment is *safe* a less per centage is demanded for capital, and in proportion to the risk the demand is increased. But a man with a large capital only requires a small per centage to secure a large total income, hence capitalists prefer sure and safe investments at low rates of interest, as bonds, mortgages, real estate, &c. But such investments are not those which most stimulate a community to activity. The investments which most benefit a major portion of the community are those which are more or less uncertain as regards their profitableness. They are investments in manufactures, in commercial enterprises of all kinds, very often in inventions, or in discoveries. It is not always the safest operation in the world to build a railroad, so far as they who make the first investment are concerned; yet there are very few railroads built in this country but what enrich the community to an amount many times greater than the cost of the road. Enterprise is necessarily risky, and yet the only way for poor men to become well off is to be enterprising. The majority of the community are poor, therefore, the community must be enterprising in order to be prosperous.

The issue of Government securities has increased the supply of money. It now seeks investment. Capitalists, or men who have their fortunes already made do not need it; but poorer men require it, and will use it in developing new enterprises and new industries which will yield a profit to themselves, and afford employment to others. There is thus created a really healthy excitement throughout the land. The men who control large establishments find their plans resulting profitably, and the balances on the right side of their ledgers. Employees find their labor sure and remunerative. Thus while capitalists prefer safety and hold on to their securities, the

commercial and industrial classes are rendered independent by drawing their working capital from a different source, and the nation moves on to wealth and prosperity.

But will there be trouble in the future, will there be failure and ruin? We do not doubt but that the future will unroll to our experience both failure and ruin. A large number of men never drank wine together without some of them becoming intoxicated. All enterprises will not prove successful; human judgment is too imperfect, and human skill and execution often times prove inadequate. But many enterprises will be successful, and the community at large will be benefitted. There will be no great crisis when strong men will go down, and the names of honored firms become obliterated. In our opinion the future will develop permanent success to the people of this nation.

If there was a prospect of an immediate, or sudden withdrawing of Government securities, danger might be apprehended. But the United States debt is a permanent loan to the community, and years to come it will furnish a capital which will be used in developing our old and our new resources. We cannot estimate the vast results which follow a little stimulation of business. We know how much more active, manly and energetic our personal friends become, when they feel conscious that they are driving a good business, and are "making money." The same influence, affecting a large number of our citizens, while, perchance, it might ruin some, would greatly benefit most of them, and the welfare of the whole community would be improved. This we believe is what is taking place. The activity which money encourages is the secret of our prosperity. We believe the nation will gain far more than the annual interest upon the national debt; and will be enabled to pay the principal itself, when it shall become due, from the profits made out of using the debt itself as a working capital.

NOTICE TO CONTRACTORS.

ALBANY AND SUSQUEHANNA R R.

SEALED PROPOSALS WILL BE RECEIVED by the undersigned at the Engineer's Office, in the village of Unadilla, Otsego county, until Thursday, the 29th day of October instant, at 10 o'clock A. M. of that day, for Grading, Masonry, Bridging and Fencing of about 45 miles of the line of said railroad, extending from the village of Oneonta, in Otsego county to and including the Tunnel of about 2,000 feet through Webster Summit, in the Town of Colesville, in Broome county.

The line will be divided into Sections of convenient length, and proposals will be received for single Sections, or for the whole line.

The line will be ready for examination on and after Monday, the 19th inst., and Maps, Profiles and Plans, with Specifications may be examined at the Engineer's Office, in Unadilla, on and after that date.

Blank proposals, with all necessary information, will be furnished to those wishing to propose for work, at the Office of the Company, 73 State Street, Albany, and at the Engineer's Office, in Unadilla.

Proposals should be enclosed in an envelope and endorsed "Proposals," and directed to the undersigned at Unadilla.

The proposals which may be received in pursuance of this notice will be opened by the undersigned and canvassed, and the results reported to the Directors to aid them in making a proper award of the work.

Parties proposing, who are unknown to the undersigned, will be required to give satisfactory references.

The right is reserved to reject any or all proposals, as may be deemed for the interests of the Company.

Albany, October, 1st, 1863.

C. W. WENTZ, Chief Engineer.

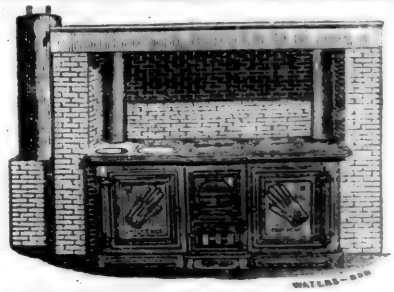
S. T. BAKER,
No. 83 South st., New York.

The COSMOPOLITE PARLOR RADIATOR, & GAS BURNER,

Introduced one year ago, already ranks as the LEADING STOVE for PARLORS, SITTING ROOMS, and all places where a soft, pleasant heat is desired.
Fire may be kept all winter with an astonishingly small supply of coal.
Send for description and testimonials.
SANFORD, TRUSLOW & CO.,
Nos. 239 and 241 Water st., N. Y.

SANFORD'S MAMMOTH OR GLOBE HEATERS.

The best stoves for RAILROAD DEPOTS and SHOPS, and all places where a great heat is required. They are very durable, and very economical of coal.

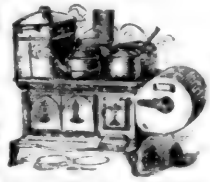


Beware of imitations that are inferior in strength and in other respects.

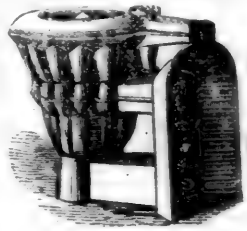
TESTIMONIALS.

HUDSON RIVER RAILROAD OFFICE, N. Y.
This Company have now in use, over two hundred of Sanford's Mammoth Heaters, in Station Houses, Work Shops and Engine Houses; we commenced using them in 1853, and some of the first stoves put up are still good and in use. We consider them the best Heaters now in use.
J. M. HEBARD, Supply Agent.

UNION FERRY COMPANY.
The Mammoth Heaters have been used by this Company in their waiting rooms at the several ferries and found to be very excellent stoves and more durable and valuable than any heretofore used. CYRUS P. SMITH, Managing Director.



MANUFACTURED AND SOLD BY
SANFORD, TRUSLOW & CO.,
Nos. 239 and 241 Water street, New York.



Challenge Air-tight KITCHEN RANGES,

May be placed in a fire-place without masonry, and with or without water-back; or may be set out on feet, as an ordinary stove.
This range, already very popular, has the LARGEST OVEN of any in the market; BAKES PERFECTLY, never burning to brown at the bottom; BOILS, ROASTS and BROILS with unequalled facility and dispatch, and with extraordinary ECONOMY OF FUEL, which may be either coal or wood. Flues large and easily cleaned. A child can manage it, so simple is its construction. Castings extra heavy, and design plain and chaste.
Four sizes, adapted to families and hotels.

Beacon Light SUMMER AND WINTER PORTABLE RANGE,

Is a very popular range, having six boiler holes, one large oven that bakes perfectly, with an arrangement for roasting, or heating irons at the end. It is very economic. of fuel. For a FEW DOLLARS a family may be supplied with a PERFECT COOKING APPARATUS, equal to the highest price stove in the market.
Three sizes, adapted to coal, or wood.
SANFORD, TRUSLOW & CO.,
239 and 241 Water st., N. Y.

Sanford's CHALLENGE HEATERS SET IN BRICK, PORTABLE OR AS FIRE PLACE HEATERS,

FOR WARMING BY ONE FIRE WITH PURE, SOFT AIR
Dwellings, Churches, Hotels, Public Halls, Railroad Depots, Vessels, etc.,
WITH AND WITHOUT REGISTERS.
THE MOST POWERFUL HEATERS AND THE
Greatest Fuel Savers in the World:
With an unparalleled mass of unimpeachable testimony of well-known Citizens, Ministers, Doctors, Lawyers, Merchants Mechanics and others.

Send for pamphlet containing full description and testimonials.

CHAS. NEWCOMB, Vice Pres't.
C. J. DESPARD, Secretary.

ENGINEER'S FIELD BOOK,

By **C. S. CROSS, Civil Engineer.**

THIS work is designed as a pocket companion, and embraces, in the most compact form, all the necessary tables for prosecuting railroad surveys. It is subdivided as follows:—

1st. The method of **staking** out railroad curves and keeping field notes.
2d. Railroad curve tables for expeditiously determining the points at which commences the curving.
3d. Application of the Prismoidal formula in determining the quantities of excavation and embankment of canals and railroads from transverse sections.
4th. Excavation and embankment tables for expeditiously determining the cubic yards from mean area.

It is a plain, clear and most valuable book for practical Railroad Engineers. Sent, **free by mail,** upon receipt of the price. For sale at this office. Price **$1.**

AGENCY FOR THE SALE OF

WILLIAMS & PAGE'S

PASSENGER CAR LAMPS

FOR KEROSENE OR COAL OILS.

THESE Lamps, now in use on a large number of Railroads are very neat and ornamental, and being enclosed in a Brass Case which is firmly secured to the side of the car, **entirely avoid the dripping of oil on Passengers and Car Cushions.**

The Light is very strong and brilliant, requiring no reflectors and **lighting up** the Cars so as to give them that bright and cheerful appearance so much desired by roads for the pleasure and comfort of their Passengers. These Lamps are strong and durable, and are as easily taken care of as any in use. A full sized drawing sent when requested.

For Cars with "raised" or "high" roofs we make these Lamps with brass arms to suspend in any required manner.

Manufactured and for sale by

WILLIAMS & PAGE,

67 Water st.,

Boston, Mass.

MUNN & CO'S
PATENT OFFICE.
ESTABLISHED 1842.

DURING the past twenty years, Messrs. MUNN & Co., in connection with the publication of the WEEKLY ILLUSTRATED SCIENTIFIC AMERICAN, (the only paper devoted to the Mechanic Arts in the country,) have acted as Attorneys for procuring letters patent in the United States and all foreign countries.

They would state that they have acted, during this period, as agents for more than

TWENTY THOUSAND INVENTORS;

In fact, they have become identified with the whole brotherhood of inventors and patentees, at home and abroad. Thousands of inventors for whom they have taken patents have addressed to them most flattering testimonials; and the wealth that has inured to the inventors whose patents were secured through their office, and afterward illustrated in the SCIENTIFIC AMERICAN, would amount to many millions of dollars!

Messrs. MUNN & Co. are prepared to attend to patent business of all kinds, in the quickest time and on the most liberal terms.

For further information, send for a pamphlet which contains the Patent Laws of the United States, and much other valuable information of importance to inventors and all others who own patent property. Also pamphlets of information furnished regarding the Patent Laws of all foreign countries.

For further particulars address

SMITH'S
Railroad Air Light Comp'y.

THIS COMPANY OWNS THE EXCLUSIVE RIGHT of **SMITH'S AIR LIGHT FOR RAILROADS**, and is prepared to sell to Roads the right to use the same. We have arrangements perfected for furnishing Lamps and Burners at about the same price charged for the Oil and Kerosene Lamps by other Manufacturers.

That Railroad Managers may know the value of this LIGHT, we annex letters from the Hon. CHAUNCEY VIBBARD, the General Superintendent of the New York Central Railroad, and also from the Master Mechanics of the same road, showing its comparative cost with that of Oil Lights:

NEW YORK CENTRAL RAILROAD,
GENERAL SUPERINTENDENT'S OFFICE,
ALBANY, November 15, 1862.

TO THE MANAGERS OF RAILROADS:

Gentlemen,—This Company has adopted and is furnishing all their locomotives with the "SMITH AIR HEAD LIGHT."

They do this both on account of economy and the very superior light it affords.

We regard it as vastly superior to any light that has ever been produced, and commend it to the consideration of railroad managers.

Very respectfully, etc.,
C. VIBBARD, Gen'l Sup't.

NEW YORK CENTRAL RAILROAD,
MASTER MECHANIC'S OFFICE,
WEST ALBANY, January 23, 1863.

DR. GEORGE HAND SMITH:

Dear Sir,—Below please find the cost of locomotive lamps burning oil on this division.

Supposing oil cost $1 57 per gallon.
Cost per hour, 5 cents.
Cost of wicks, chimneys, per year, $4 80.
Estimate cost of leakage, gumming and overflow, one-fourth of the consumption.

In the year 1861, when the lamps were all oil burners, the cost of repairs were $10 20 per year.

You will please add the overflow to the actual cost per hour, which would make 6.25 per hour.

Your most ob't servant,
EDWARD H. JONES,
Master Mechanic, Eastern Division.

300 days, 5 hours each day, 1,500 hours, 6¼c. per hour	$93 75
Repairs of lamps for one year	10 20
Wicks and chimneys	4 80
	$108 75

NEW YORK CENTRAL RAILROAD,
MASTER MECHANIC'S OFFICE,
ROCHESTER, Feb. 2, 1863.

DR. GEORGE HAND SMITH:

Dear Sir,—In answer to your inquiries in reference to your Air Light, I would state that we have upon this division of the road 28 of your lights on our first class passenger and freight engines. I find the light consumes about five feet of common gas per hour, which, at the price of gas at this place, $2½ per thousand, makes the cost of light for each engine 1¼ cents per hour.

Renewing my often expressed opinion that your light, for its reliability, its economy and superiority, far exceeds any light heretofore used on engines,

I remain, very truly, yours, etc.,
DAVID UPTON,
Master Mechanic, Western Division.

300 days, 5 hours each day, 1,500 hours, 1¼c. per hour	$18 75
One-sixth waste of gas	3 12
Repairs of lamps for one year	5 00
	$26 87

Further information may be obtained at the office of the Company, **21 Nassau st.**, or by addressing

CHAS. W. WELSH,
Secretary.

Enlargement of the Champlain Canal.

A convention was held at Whilehall on the 25th ult., composed of delegates representing the large commercial and forwarding interests connected with the Champlain Canal. The Hon. Geo. W. Goff, of Port Henry, was unanimously elected President, and W. L. Van Alstyne, Troy, J. C. Howe, Waterford, C. W. Armstrong, Albany, T. T. Vaughn, Whitehall, C. F. Norton, Plattsburg, and W. I. Smith, Whitehall were chosen Vice Presidents. J. W. Fuller, of Troy, A. G. Micklejohn, Putnam, and Oliver Bascom, Whitehall were appointed Secretaries. The object of the meeting was as stated by the President, to obtain such an enlargement of the Champlain Canalas will accommodate its increasing business. It has been of late years greatly neglected, the necessary repairs have not been made, and it is so narrow in many places that two boats cannot pass each other. Some of the locks have been enlarged, and others remain of the old dimensions; in short it may be considered to be in a state of dilapidation. It appears that the Canadian trade is on the increase. The free entries of Canadian products in 1862 at Rouse's Point amounted to $4,000,000, and the custom duties were $200,000. This year the amount will be $7,000,000 of the one class, and $300,000 of the other, being an increase of 50 per ct at the Custom House as compared with the previous year. Resolutions were adopted to obtain from the Legislature better management of the canal and also its enlargement.

The whole subject was fully and ably debated, by Messrs. Vaughn, G. H. Stewart, J. Potter, W. Crocker, (Civil Engineer,) W. Myers and others.

A Committee also reported another set of resolutions, recommending the abolishment of the system of repairs by contract, and the deepening and widening of the canal so as to pass boats drawing 4 feet 6 inches of water. What we conceive to have been the most important point made at the meeting, was that brought forward by Mr. Van Alstyne, the Mayor of Troy, whose remarks and those of other gentlemen we quote from the Troy *Daily Press*. The speaker in answer to some inquiries as to the wishes of the business men of Troy, said he had no doubt that a movement for immediate improvement would find favor in that city, if it was understood that another movement was at once to follow for the enlargement of the canal to the capacity of the Erie. He was also well satisfied that should it be deemed advisable to attempt to enlist the aid of the General Government to make the Champlain a SHIP CANAL, that Troy would warmly and earnestly favor that. It was certainly wise and commendable to look well after our home business interests, and to demand our rights of the State as business men. It may also be well to remember that we are citizens of the Union, and as a people have National interests to protect and to be fostered. It is not best to confine our thoughts and aims wholly to "pent up Utica," when we have "one unbounded continent," and know right well that it is *all* ours. Already the subject of connecting inland waters with the great lakes has occupied considerable attention in Congress, and probably the subject will be discussed during the coming session. *If the government takes definite action in the matter, its attention cannot fail to be directed to the Champlain Canal.*

MR. SANBORN, of Sandy Hill, moved the Convention appoint a Committee of five to secure, if possible, the co-operation of the General Government in the Champlain or Ship Canal.

The President said he would state a fact which had come to his knowledge. He was credibly informed that the General Government has had recently at work a Corps of Engineers, looking after the feasibility of connecting the New York Canals with the Northern Lakes. He had no doubt the Government was making preliminary arrangements for connecting the Atlantic with the great internal waters of the country; and he believed an intelligent committee might act with efficiency in promoting what now seems likely to become a great national undertaking.

Mr. Northup advocated the enlargement of the Canal, and said the Convention should think of nothing less. Ask for little and you will get nothing. Ask for what you want, for that to which you are entitled, stand up for your rights, like men who are in earnest, and you will succeed. We may not live, *but our children will, to see the Champlain a Ship Canal accommodating a great international trade*, bearing on its waters iron clads and Monitors. He hoped the Convention would be satisfied with nothing less than an immediate enlargement on a liberal scale.

Mr. Sanborn's motion for the appointment of a committee, was adopted, and the Chair named the following gentlemen, as the Committee:—

Hon. John A. Griswold, Troy.
J. W. Freeman, Troy.
Hon. O. Kellogg, Essex Co.
J. K. Sanborn, Sandy Hill.
Oliver Bascom, Whitehall.

The following gentleman were appointed a Committee, under the recomendation of the Business Committee: L. J. Stark, New York; C. W. Armstrong, A. Roberston, G. C. Burdett, Thomas Coleman, Troy; G. H. Stewart, Waterford; G. H. Crocker, Sandy Hill; G. W. Gouff, J. C. Wetherbee, Port Henry; T. T. Vaughn, W. I. Smith, Whitehall, C. F. Norton, Plattsburg; Geo. Hyde, Champlain.

The following resolution, additional to the regular series, was adopted:—

Resolved, That this Convention will apply to the next Legislature, for an appropriation sufficient to bear the expense of bottoming out the Champlain

Canal to the depth of three inches additional to the present depth; and that the Committee named, in pursuance of the recommendation of the Business committee, be requested to wait upon the Legislature, present facts and statistics, and request that the appropriation be made.

The convention adjourned to meet at Troy on the 15th inst.

The subject of a ship canal having been taken up on this occasion, will we trust not be permitted to sleep.

To deepen the Champlain Canal a few inches is at best a petty improvement. Make it a ship canal which can be done at a very moderate expense, get the Montreal merchants to widen and deepen the Chamblee, or build the Caughnawaga Canal, and we shall have an internal navigation suited to the wants of commerce, and of immense value to the west, and to this State. It is but a waste of time to agitate for three or four inches of excavation. The Chicago people know too much to do anything of this sort. Are there not men and minds in Troy and Albany great enough to grasp this subject? Sufficient has been said to prove the entire practicability of the plan. The facts furnished in our columns alone, the details we have given, obtained from Engineers, and official reports, are enough to act upon, and secure by a combined and systematic effort the adoption of the plan. We especially look to the energetic Mayor of Troy, to set the proper machinery in motion, so that the people on the banks of Lake Champlain and the Hudson, can be brought to act on this subject as one man.

Hartford and New Haven Railroad.

The income of the road for the fiscal year ending August 31, 1863, is as follows:

From passengers	$557,906 19
" freight	354,509 87
" rents, mails and express	46,043 35
	$958,459 41

And the expenses were:

Repairs of road & bridges	$100,028 35	
Material and labor on engines and cars	104,538 50	
Station repairs and improvements	9,865 47	
Transportation and general expenses	151,872 51	
Wood, coal and oil	82,372 48	
Lost and damaged goods, gratuities, etc.	2,465 95	
	$451,143 26	
Balance of interest acc'nt.	49,548 65	
Taxes—State & National.	45,913 35	
		546,605 26
Net receipts		$411,854 15

The total number of passengers carried on the road during the year, including soldiers, is 663,290, which exceeds by 151,739 the number carried in the preceding year, which increase is almost wholly in regular passengers, the number of soldiers carried varying but very little from that of the previous year.

The total number of tons of freight transported is 232,639, which exceeds that of the previous year by 42,369.

Miles run by passenger trains	263,905
" freight "	117,621
" other "	22,771
Total miles run	404,297

which is 56,937 miles in excess of the number for the previous year, the increase being mostly by freight and other extra trains.

The gross income of the road exceeds that of the previous year in the sum of $241,158 61. Of this increase $145,454 01 is derived from passengers, and $61,913 33 from freight. The report says:

The same fortunate exemption from serious accident which has characterized the road in years past, has attended its operations during the year just closed.

The stockholders will probably not fail to observe a very considerable increase in the expenditures in all the several items of charge for operating the road. It has been necessary to advance the rate of compensation to all the employees of the company, and the cost of every item which is required in the business has increased with the general inflation of prices throughout the country. An increased quantity of new iron has been placed in the track, and very large additions have been made to the equipment of the road in engines and cars, most of which have been constructed in the company's shops, and the cost of which has all been included in the accounts of current expenses for the year.

Taxes, State and National, now constitute a large item of expenditure, being for this year nearly two per cent. upon the capital stock of the company, and as the taxes payable to the State are assessed at three-fourths of one per cent. upon the *market* value of the stock, they increase with the increased appreciation of the stock by those who hold it.

The passenger fares, between most of stations, were slightly increased in May last, so that all the first class fares should correspond as nearly as practicable to an uniform rate of three cents per mile. The result of this increase of fares have to some extent furnished the means of meeting the three per cent. National tax upon the gross passenger earnings of the road.

A new wharf, in connection with the Tomlinson Bridge property at New Haven, has been constructed during the year. This structure is about 800 feet in length, by 60 in width, and is an improvement which was indispensable. It now furnishes greatly increased facilities for receiving upon the cars the constantly increasing quantities of coal, lumber, and other heavy freights which are consigned by vessels to New Haven, to be forwarded by the road.

The cost of this work has been paid by the company, and is charged to the account of the Tomlinson Bridge Company.

The new piers for the proposed iron bridge over the Connecticut River, mentioned in the report of last year, have been substantially completed, and are now ready to receive the superstructure. The same unsettled condition of the iron market alluded to in that report, has as yet prevented the making of a satisfactory contract for the bridge. It is hoped, however, that before the expiration of another year, a more favorable opportunity for effecting this object will occur, and that the work will be commenced under such arrangements as to ensure its prompt completion. There has been paid on account of the new piers during the year the sum of $26,963 49, as will appear by the Secretary's report.

The rapidly increasing business at Springfield Station, especially in coal and other heavy freight, has demonstrated the inadequacy of the grounds heretofore owned by the company at that point to the proper accommodation of its business. A purchase of real estate there at a cost of about $12,000 has recently been made, which, when properly improved, will, it is believed, afford the facilities necessary to the convenient transaction of the business of the road at that station.

It becomes necessary to repeat once more the statement that the suit with the New York and New Haven Railroad Company has not yet reached a conclusion. The decision of the referee has been postponed, from time to time, on account of his serious illness, but there is reason to anticipate a report from him now within a short period. In the meantime all the transactions between the two companies are continued in the same unsatisfactory manner as heretofore.

The notice for this annual meeting calls the attention of the stockholders to the subject of an Act of the Legislature of Massachusetts, authorizing the issue of additional capital stock.

This act was passed some years since, and authorizes the issue of six hundred and fifty thousand dollars of additional capital stock, to be disposed of as shall be determined by the stockholders.

In view of the large outlay which will be required by the construction of the Connecticut River Bridge, and other additions to the permanent investments which the interests and the increasing business of the company may demand, it will be for the stockholders to determine whether to accept the provisions of this act, so as to enable the company to provide for these expenditures by an increase of capital from time to time, as circumstances may render expedient.

A regular dividend of three dollars per share, and an extra dividend of five dollars per share, both free of Government tax, have been declared payable to the stockholders on the 1st of October next.

The income account of the company for the past year is as follows:

Cash on hand September 1, 1862	$157,444 27
Income of the road	958,459 41
Sale of house and gravel pit	275 00
	$1,116,178 68
Dividends paid	$308,480 00
Interest	49,548 65
Operating and repairing road	470,942 01
State and National taxes	45,913 35
Sundry claims by Colton fire	8,241 95
Real estate, Springfield	11,809 72
Connecticut River (new) bridge	26,963 49
North Haven bridge	3,064 73
Balances due company increased	3,774 40
Cash	187,440 38
	$1,116,178 68

The following from the Ledger, presents a general statement of the affairs of the company, September 1, 1863:

Capital stock	$2,350,000 00
Bonds	927,000 00
Contingent fund	517,621 52
Reserved fund	150,000 00
Profit and loss	200,354 15
Dividends unpaid	9,216 00
Debts due by the company	26,863 30
	$4,181,054 97
Construction	$3,158,644 52
Middletown Extension Railroad	27,664 38
Real estate, land, dwellings, &c	73,787 40
Tomlinson bridge stock	102,888 67
Advances to Tomlinson Bridge Co.	38,817 31
Equipments, engines, and cars	254,000 00
Wood, stock, and tools	155,476 03
Debts due the company, including accounts due from N. Y. & N. H. R. R. Co., unadjusted	182,336 28
Cash on hand	187,440 38
	$4,181,054 97

The office of the company is at Hartford, Ct. The directors chosen September 16, 1863, are as follows:

President.—C. F. Pond.

Directors.—Charles F. Pond, Julius Catlin, Corneilus Vanderbilt, Henry Coit, John A. Robinson, Ezra C. Read, Chester W. Chapin, A. G. Hazard, Samuel H. Parsons.

Superintendent.—E. M. Reed.

Secretary.—S. P. Conner.

Construction of Railroads.--Uncertainty in Describing Appropriated Lands.

IN A PROCEEDING TO APPROPRIATE LANDS BY A RAILROAD COMPANY IN OHIO, A CERTAIN DESCRIPTION OF THE LANDS TAKEN DECLARED SUFFICIENT.

This was an action brought by Prentice & Maddocks against the Cleveland and Toledo R. R. Co., for the recovery of a piece of land one hundred feet in width across lot 15, in river tract 87, in Lucas County.

On October 25th, 1852, one Robert Piatt owned the whole of said lot 15, and on that day conveyed the same to Prentice and Maddocks. Prior, however, to this conveyance, the Cleveland and Toledo Railroad Company had instituted proceedings to appropriate to its use a portion of this lot. The appropriation proceedings were instituted under an act of Ohio, passed February 11, 1848, "regulating railroad companies;" and at the time Piatt was a non-resident of the State.

The instrument of appropriation filed by the company in the office of the Clerk of the Common Pleas of Lucas County, February 28, 1851, described the land intended to be appropriated, as follows:

Fifty feet wide on each side of said railroad, as last surveyed, through subdivision lots, Nos. 1, 2, 3 and 4, of fractional section No. 1, of township 10, south of range 7 east, commencing on the north bounds thereof; thence westerly and southerly on and near the northerly bounds thereof to a point in the west line of said No. 4, near the northwest corner. Also lots No.'s 11, 12, 13, 14 and 15 (the lot in question,) etc., "of the subdivision of river tract No. 87."

On March 4, 1851, the company gave a notice to Piatt, by publication, stating the substance of the instrument of appropriation, and giving the description of the land as above. On April 21, 1851, upon the application of the company, appraisers were appointed and a warrant issued. The following is a copy of the return of the appraisers:

"In lot *fifteen*, subdivision of river tract 87, in the 12 miles square reserve, at the foot of the rapids of the Miami of Lake Erie, 64-100 acres.

Value of land appropriated	$25.60
Damages	
Benefit to owners	25.60
Amount to be paid to owner	$00.00

The company took possession of the land immediately after the appraisers made their return, and proceeded to construct its railroad thereon, and thereafter remained in possession of the same, using it for the purposes of its road. Of all of which Prentice and Maddocks had full knowledge when they bought of Piatt.

On an appeal from the Court of Common Pleas, to the District Court of Lucas County, at its April term in 1860, it was decided that the railroad company, by its appropriation proceedings, acquired no right or title to the land in controversy, and that Prentice and Maddocks were entitled to its possession, and rendered judgment accordingly. The company then moved for a new trial; the motion was overruled and they then appealed to the Ohio Supreme Court. The point involved was whether the description already given, was sufficiently *certain* and *definite* under the statute. The Supreme Court now decide that it was and render judgment in favor of the company. The following is the opinion rendered at the decision of the case; with the exceptions of the cases referred to and considered:

SUTLIFF, C. J.—The plaintiffs below, in support of their claims to recover the lands in question, showed by their proof a conveyance to them on the 23d day of October, 1852, of lot No. 15, by Robert Piatt, who held the title at the time of the location of the railroad, and who, it is admitted continued to hold a perfect title at the time of executing his deed, unless divested of the land in controversy by the proceedings of the railroad company, as stated. If, therefore, at the time of the institution of the action below, Piatt, had he made no conveyance, could have recovered the land from the company so occupied through lot 15, as their road track, then and in that case Prentice and Maddocks, his grantee, were entitled to recover; otherwise they were not.

The defendants below relied upon the proceedings of appropriation which it gave in evidence to show the lands appropriated as a railroad track on the 21st of April, 1851; and it seems to be conceded by the defendants in error that with one exception these proceedings were regular, and that all the steps were taken to operate as an appropriation.

But it was objected by the plaintiffs below that the description of the land intended to be appropriated by the proceedings was too vague and uncertain to admit of the proceedings being operative to appropriate either the lands in question or any other lands. It is insisted by the plaintiffs in error that the description was sufficiently certain, and in fact, embraced the lands in question, and that the district court, therefore, erred in not regarding the lands legally appropriated by the company for its railroad track through said lot, No. 15.

* * * * * *

Our statute authorizes the company to "enter upon any lands for the purpose of examining and surveying its railroad line, and appropriate so much thereof as may be deemed necessary," etc. In this case the notice mentions the survey as having been made, as the statute evidently contemplates it should be, before the proceeding to appropriate. The description in the notice is as definite a description of a surveyed railroad track as could well be made; and if the survey had in fact been made, such a description in a deed would be even more certain than could be expressed by courses and distance; and would be beyond doubt a sufficient description in the deed of conveyance to pass the title in the railroad track to the company. But the record only shows that the road bed had been surveyed and staked out previous to the 1st day of April; yet the return of the commissioners that they had viewed and appraised the lands described, and giving as they do, the precise quantity of land, clearly implies that they found the road surveyed as described in the notice. Indeed we do not understand counsel to insist particularly upon the want of certainty at the time the appraisers made their view and appraisal on the 21st of April. But it is insisted that the plaintiffs in error did not, on the trial below, make proof that the road bed was, in fact, surveyed and staked out on the 28th of February, or on the 4th of March, 1851, at the time of applying for the appropriation and giving notice to Piatt by advertisement. To this objection, we think, the defendant below might well have claimed, under the law and circumstances of the case, that after the proof of so much by the company in support of the defense, the burden of proof was reasonably shifted upon the plaintiffs below to rebut the presumptions in favor of the title of the company, arising from their proof. Indeed, it may well be questioned whether a survey made, and monuments set along the land to be appropriated, as described in the notice, as early as the 1st of April would not have been sufficient. But in this case, from all that appears upon the record, the reasonable presumption would be that the petition correctly described the land as then surveyed. The proof it is true is not positive that the survey was made as early as prior to the 1st day of April; and there is no proof or circumstances tending to show that it was not in fact made, as recited in the notice, at the time the notice was given.

It certainly, is not an unreasonable presumption, after proof of the fact that a road or canal had been surveyed and staked out, that when worked and in operation as a public thoroughfare, without any objection to the *locus in quo*, it should, if afterwards questioned, be presumed to have been opened *where* surveyed and located. And more especially is such presumption clear, in such a case where the stakes or monuments set are, after its completion found to be all removed, as in the case of a railroad or canal they necessarily must be when opened on the line so surveyed and staked.

We therefore, regard the proof made by the defendants below, in relation to the proceedings to appropriate the lands in question, as by no means void for uncertainty of description; but as *prima facie* embracing the lands in question, and sufficient in law unless rebutted by countervailing proof on the part of the plaintiffs below; and no such proof appears to have been offered upon the trial.

The judgment of the district court must therefore be reversed with costs. And this court, thereupon, proceeding to render such judgment in the case as the district court should have rendered, order that the petition so filed by the plaintiffs below be dismissed; and it is thereupon adjudged that the defendants below recover of the plaintiffs below their costs.

Judgment accordingly.

Northern Central Railway.

In the Baltimore City Council, on the 30th ult., the ordinance granting certain privileges to this company to enable them to complete the road entire, from Sunbury to tide water at Canton, was passed, with a proviso that the work shall be completed by the 1st of January, 1868. The ordinance gives the assent of the city to the construction by the company, within the city limits, of a lateral branch railroad from any point on the road to the water line of the Patapsco River, east of Jones' Falls, without any other condition or restriction than those imposed by the act of assembly of 1853, chapter 191. Also said assent is given to the company to alter the location of its present track, provided it is not put down west or south of its present location, in any part thereof between Calvert Station and the city limits. It is also required that the written consent of the

owners of two-thirds of feet of ground binding on or fronting on that part of the street, lane or alley, to any alteration in the grade thereof, shall be obtained—the cost thereof to be borne exclusively by the company.

It is required that the chief officers of the company, including the Treasurer, Secretary, Superintendent, Master of Transportation and Master of Machinery, shall be in the city; that the elections and meetings of the directors shall be held there; also, that within the limits, or within one mile thereof, the company shall establish and forever maintain its principal workshops for all purposes for which such shops are required, and that the city reserves to itself the right—if the charter admits of the same—to elect two directors annually in perpetuity to represent the city in the company. It is made a condition of the ordinance that the company shall commence and prosecute the construction of a double line of railway from Baltimore to Cockeysville, in Baltimore county, with as much speed as due economy of labor will permit. The company is also required to extend to the Western Maryland Railroad Company all customary facilities to enable that company to convey passengers and freights to and from the junction at the Relay House; also, to sell through tickets to and from all the regular stations on the Western Maryland Railroad.

Should the company refuse or neglect to comply with each or any of the provisions of the ordinance, then all privileges either in this or ordinance 57 of 1854, approved June, 1854, shall be forfeited and revert to the city. It is also made a condition that the company shall not discriminate in its rates for transportation over the road to the injury of the trade of the city, or of any party doing business therein.

Grand Trunk Railway of Canada.

The following is the report of the directors for the half-year ended June 30, 1863:—

Earnings of the half-year	£434,340
Deduct ordinary working expenses	277,204
Net balance over ordinary working exp.	157,136
Deduct renewals of permanent way	32,963
Net balance, June, 1863	£124,173

1. The accounts of the half-year exhibit a total receipt from traffic and all other sources of 434,340*l.*, against 382,993*l.*, for the corresponding half of 1862, or an increase in 1863 over 1862 of 51,347*l.*, or 13.45 per cent., and against 347,110*l.* for the corresponding half of 1861, or an increase in 1863 over 1861 of 87,230*l.*, or 25.13 per cent.

The tabular statements in page 29 show that nearly every item of the company's traffic revenue has increased during the half-year, the main exception being the local passenger traffic. In that item the decrease of 1,052*l.* is much more than accounted for by the extraordinary receipt caused by the movement of troops in the early part of 1862, the receipts for military services in the corresponding half-year of 1862 having been 12,630*l.*, as against 1,853*l.* in 1863.

2. The working expenses show a total expenditure of 277,204*l.*, or 68.83 per cent. on the gross receipts, as compared with 77.24 per cent. in the corresponding period of 1862. Adding renewals in both cases, the expenditure compares as follows:—

	Work'g exp.	Renewals.	Total.
June, 1863	£277,204	£32,962	£310,166
" 1862	295,855	23,701	319,556
Increase in renewals		9,261	
Decrease in ordinary and total expenditure	£18,651		£9,390

It will be observed that, as compared with 1862, while a gross increase of revenue of 51,347*l.* has been earned, the total expenditure has been reduced by no less than 9,390*l.*, including in that expense the increased charge for renewals.

The following statement exhibits the progress of the net revenue of the company since 1859 inclusive:—

Year.	June half-years.	Dec. half-years.	Total.
1859	£20,868	£52,490	£73,358
1860	46,001	56,684	102,685
1861	46,786	95,708	142,494
1862	63,436	106,798	170,234
1863	124,173		

4. From the net profit of the half-year, viz., 124,173*l.*, there has to be deducted a nominal amount of 10,462*l.* for postage and military service receipts, the charge for the former being still unsettled and the money being still detained by the Provincial Government. The sum of 6,589*l.* for loss on American currency—an item of loss which will, it is feared, be even heavier in the current half-year, with its larger traffic—has also to be deducted.

5. These deductions leave the sum of 107,122*l.*, which has been applied as follows:—

In payment of interest, &c., on lands	£1,534	12	7
Ditto ditto on mort. to Bank of U. C.	4,423	16	2
Ditto ditto promissory notes European Exchange	801	19	6
In payment of interest on British American Land Co's. debentures.	616	8	9
Ditto ditto Montreal Seminary debentures	616	8	9
Ditto ditto Island Pond debentures.	2,700	0	0
Ditto half-yearly instalments Portland sinking fund	2,311	12	4
Ditto Atlantic and St. Lawrence lease (in full)	32,763	7	11
Ditto Detroit Line lease in full	11,250	0	0
Ditto first preference bond interest for half-year	49,917	15	0
Balance carried forward to next account	185	19	0
	£107,122	0	0

6. The whole amount expended for renewals and improvements of the permanent way, ordinary and special, has been charged to revenue. The charge in the half-year is 9,261*l.* in excess of that incurred in 1862. It has been decided to renew 100 miles of line laid with the hollow rails during the current half-year, and the apportionment of the cost will be involved in the proposed arrangement for the early substitution of "solid" in place of "hollow" rails on the whole of the main line, already discussed before the bond and shareholders and the details of which arrangement are still under the consideration of the board.

7. The unexhausted balance to the credit of net revenue account at 31st December, 1862, viz., 37,986*l.*, has been credited to capital account. The sum of 6,247*l.* has been expended during the half-year in additional works and plant and has been duly debited to capital. The sum is the only real expenditure on "capital account," although that account is also charged with the amount of capitalised arrears of interest under the lease of the Atlantic and St. Lawrence line and with certain other sums of capitalised interest on second preference bonds (not included at 31st December last), and on adjusted debts, together with the commuted arrears of rent upon the Detroit and Port Huron. The amount which has hitherto stood in the "general balances" at the debit of the "Portland sinking fund" (a statement of which is appended to the accounts) has been transferred to capital account. The operation of this fund, which was intended gradually to liquidate the Portland city loans, will ultimately reduce the annual charge for bond interest, which interest forms a large part of the lease rent of the Atlantic and St. Lawrence line.

8. In the last report the directors stated that the Governor-General of Canada in council had proposed, by a minute of Council officially communicated to the company and dated 30th October, 1862, to introduce a bill in the then ensuing session of Parliament to establish a court of arbitration for the equitable settlement of the claims for the postal services performed by this and other companies for the province, and which, as conducted over the Grand Trunk system, produce a very large share of the income of the Canadian post-office.

After much delay, a bill was accordingly introduced in April last, but before it could be read a second time the Government, who had previously expressed their inability to carry their proposed measure, was reconstructed after a vote of the House, and a dissolution of Parliament supervened. The Government so reconstructed having expressed their desire to dispose of this plain matter of business in an equitable manner and without prejudice to the company's position or claims, the managing director has again discussed the whole subject with the new Postmaster-General, the Hon. Mr. Mowatt; so far, however, no definite result has been arrived at.

The board claim nothing more than a just settlement, and they will still hope, however past events may have discouraged them, that an honest claim for payment for work done may be as honestly paid for by the Governor-General of Canada in council, representing a great country forming part of the British empire.

9. The Provincial Government has been unsuccessfully applied to release 42,500*l.* second preference bonds, held by their financial agents in London to secure a loan on the postal revenue incurred in 1860, and which loan has, in the opinion of the board, been more than fully liquidated for some time past. The restoration of these securities was required in order to justify the outlay involved in building 300 new freight cars to provide for the demands upon the company's carrying power which the unusual abundance of the harvest now being gathered will make, and to enable also the erection, in this season, of the much needed central station at Toronto.

A further supply of cars and a few additional engines, which the board desire to have supplied, would go far to prevent any cause of complaint on the part of the public during the coming busy season. Until, however, the accounts with the Government are settled much inconvenience may have to be endured.

While alluding to the rolling stock, the board may report that upon the remodelling of the executive management in Canada in 1862 stock was taken, and has now been carefully checked and tested. A return is published showing the quantity of engines and cars purchased, and which are stated to have been delivered on to the line; the actual number of each class existing, and the number of cars already erected towards replacement of the deficiency discovered. Returns of rolling stock will be regularly published in future.

10. The whole of the creditors of the company in England and many of the Canadian creditors, including the largest, viz., the Bank of Upper Canada, have been finally settled with under the terms of the Arrangements Act, 1862, and deeds of release and discharge have been executed; there now remain the unsettled accounts with the Provincial Government, against which the board consider the company has, if fairly dealt with, a much larger set off; the demand of Mr. Turcotte, in reference to the "Three Rivers and Arthabaska" branch, which, fair negotiations having so far failed, may have to be disposed of through the salutary operation of the courts of law; and a few very minor claims, the exact amounts being in dispute. In one of these cases, however, vexations litigation has been attempted, and will meet with energetic and, no doubt, successful resistance.

The claim of the Portland Car Company, the only old outstanding account in the United States, is still unadjusted, but the board have every reason to expect early settlement by friendly negotiation.

11. The anxiety of the board to preserve cordial relations with the Great Western Company of Canada has been often exhibited during the past two years, and the last report states that an offer had been made on behalf of the Grand Trunk Railway Company to the board of the Great Western Railway Company to submit all matters in difference to arbitration, and had been declined.

During the past half-year questions have arisen

as the board foresaw, which might have been thus quitely disposed of; and if further and needless competition should unfortunately now arise, your board, while protecting your just rights, will not be responsible for any untoward consequence to other interests.

12. The use by the Grand Trunk Railway Company, under agreement, of the "Bonaventure street" station at and of the lines near Montreal, also of the new junction line connecting the mixed gauge near "The Tanneries," with the lines of the Montreal and Champlain (whose railways of 83 miles connect at Rouse's Point with the Vermont Central Railway for Boston at Moore's Junction with the Plattsburg Company for New York and at St. John's with the Chambly line) has tended much to promote better access to the city of Montreal and greater facility and convenience of working generally. Since these new arrangements, dating from the autumn of 1861, an important change of traffic has sprung up, proving the desirability, if not necessity, of a closer and permanent union—such an union as would render the interests of the two companies identical as regards the production of the largest total amount of net revenue, without, at the same time, making either company responsible for the seperate bonds, debts, or engagements of the other. With these objects in view, an agreement has been prepared for the consideration of the bond and shareholders, and the board will recommend its adoption at the ensuing meeting, to be made special for the purpose. The agreement proposes to accord to the Champlain Company one-fifteenth of the total net profit earned on the two systems, with a stipulation that for a short probationary period of three years the share of the Champlain Company shall not be less than $100,000, or about 20,000*l.* per annum.

The net earnings of the Champlain Company's undertaking were $120,000 in the year 1862—the last year for which the accounts are made up, and no risk of deficiency is apprehended by the company's executive in Canada, whose reports have been carefully considered.

The proposed extension of the Grand Trunk Railway from Bonaventure street station to the Harbor of Montreal, together with the construction of elevators and warehouses capable of great extension at deep water, is likely to be realised, and the corporation of Montreal have agreed to grant 10,000*l.* towards the cost of the property required to be taken.

These measures are further arguments weighing with the board in favor of an alliance so guarded with the Champlain Company, the confirmation of which they therefore recommend.

13. A service of screw propellers, arriving and departing three times each way per week, between Chicago, Milwaukee, and Michigan Lake ports and Sarnia, commenced to run at the close of April and has already had a good effect upon the traffic receipts of this company.

14. The through arrangements with the Buffalo and Lake Huron Company referred to in the last report have been much extended and improved. A more full interchange of traffic now takes place, and an agreement has been entered into by which running powers are to be interchanged between Buffalo and Detroit for a period of three years, and an ultimate union, on the basis of the respective net earnings of the two lines in the last year of that period is proposed for the future consideration of the two companies; the previous liabilities and capital accounts of the two companies would in such event be kept entirely separate. The agreement also contemplates (but upon condition of satisfactory arrangements being first made with the co necting railways in the United States) the laying down at an early date of a third rail inside the present 5 feet 6 inch track, so as to permit the cars of the American lines on the 4 feet 8½ inch gauge to pass from Sarnia to Buffalo. All transhipment between New York and Chicago or the Mississippi River would thus be avoided and a large accession of carrying power be obtained without any other outlay of capital. Under this agreement, when all its details are carried out, the wants of the public and of the connecting railways east and west, which have been so frequently and earnestly urged, will be effectually supplied.

15. The board are happy to be able to report that cordial relations (which it is the study of the executive to extend) exist between the different railroad companies in the United States which connect with the Grand Trunk Railway, and that the general interchange of traffic is steadily improving.

For some time past, and notwithstanding every effort to the contrary on the part of the direction and executive in Canada, the arrangements with the Montreal Ocean Steam Ship Company, under which so much of the traffic of Canada and of the Western States of America to and from Europe is worked have been extremely unsatisfactory, and even now a very large sum is owing by the Steam Ship Company to the Grand Trunk Railway Company. Looking at the rapid progress of this traffic and its vast importance to the Grand Trunk and to the western railroads, who command so much of it, your board have sanctioned public proposals to make through rates for the conveyance of passengers and freight with responsible parties running steamers to and from Portland during the forthcoming winter.

16. In conclusion, the board trust that the result of the half-year's working, which reflects much credit on the company's able executive, will be gratifying to the share and bondholders.

A largely increased revenue has been earned at diminished cost, and the net available balance of revenue is larger than it has been at any previous period.

A material reduction has been made in the locomotive department, especially in the cost of fuel, and the permanent way has been improved.

The judicious management of the company's affairs has, it is believed brought about a gratifying change in the public estimate of the efficiency of the undertaking.

From all parts of the province cheering accounts are received of this year's harvest, and the board look with confidence to the continuance of a steady increase in the revenue.

Much, however, of the financial success and efficiency or otherwise of the company still depends upon the action of the Canadian Government, but your board cannot believe that, after so many injurious delays, further injury will be inflicted upon the company and the province by withholding a fair remuneration for postal services regularly and efficiently performed, and thereby preventing the consolidation of the province and the expansion of the usefulness of this great undertaking.

17. Mr. W. Chapman having resigned his seat as a director of the company, the vacancy has been filled by the appointment of Mr. A. W. Young, whose election, in the event of a vacancy, was promised by the board at the last meeting.—On behalf of the board.

EDWARD W. WATKIN, President.

Atlantic and St. Lawrence Railway.

We are frequently asked for information regarding this fixed rental of the Grand Trunk Railway Company. We are unable to say exactly what the rent will be in the course of the ensuing ten years until the end of 1872, but we believe it will be about 4 per cent. per annum to the Atlantic and St. Lawrence shareholders in the ten years, not less than 4 per cent., perhaps a little more; and that after 1872, it reverts to the original 6 per cent.

"But are the Atlantic and St. Lawrence preserved in their present position after 1872—will they then claim their 6 per cent. before the 1st preference bond interest?"

Turning to the 20th section of the Arrangements' Act by which the rents of the company are classed as part of the working expenses, and therefore the 1st preference bonds, we see no limitation in the time during which they are so classed.

But it would be a very proper question to put to Mr. Watkin or Mr. Lloyd at the next meeting—namely whether the rents will during the whole terms of their leases rank amongst the working expenses and before the first preference bonds, the first preference bonds before the second preference, the second preference before the third preference stock, and the third preference before the fourth preference? Whether the order of precedence established by the Arrangements' Act, 1862, is maintained after 1872, as it is until 1872? The rates of interest of the various stocks alter after 1872; the concessions of the various bondholders and stockholders were only for the 10 years; but we are under the impression that the order of the rents, interest, preference dividends, &c., is permanently arranged and settled by the Arrangements' Act of last year.—*Herapath.*

Hannibal and St. Joseph Railroad.

The finances of the Hannibal and St. Joseph road of Missouri, have recently been reorganized, and the new securities admitted to dealings at the Stock Exchange. The following report of the standing committee of the stock board will best explain the present position of the share capital and bonded debt of the concern:

COMMITTEE ON SECURITIES, NEW YORK STOCK EXCHANGE, Sept. 25, 1863.

In the matter of calling the securities of the Hannibal and St. Joseph Railroad Company, it appears from the official documents submitted to the committee:

1. That more than three-fourths of the original bonds of the company have been surrendered for exchange into the new securities, and a considerable portion of the remainder assented.

2. That all rights of priority and security under the original mortgages are preserved by the special trust created for that purpose.

3. The position of the company when the reorganization is completed, will be as follows:

Debt to Missouri, for State bonds at 6 per cent. being the first lien on the road, not on the lands	$3,000,000
Land bonds, 7s coupons, 1st April and 1st October, secured by first mortgage, on about 600,000 acres of land, also included with the convertible bonds, in a general mortgage on the road	3,408,300
Convertible bonds, 7 per cent., coupons 1st January and 1st July, secured by second mortgage on the lands, and included with the land bonds, in a general mortgage on the road	822,000
Preferred stock, not cumulative, 7s, $100 shares	5,309,528
Common stock, shares $100 each	2,000,000
Total	$14,539,828

The committee recommend that the old securities be dropped, and the new securities be called upon the regular list.

Minehill and Schuylkill Haven Railroad.

We hear it stated that the lease and possession of the Minehill Railroad Company by the Reading Company will be consummated to-morrow. The shareholders of the Minehill, it is understood, are guaranteed eight per cent. per annum on their stock. If this is true, the shares of the Minehill may be set down as among the most reliable of the investment securities; and the guarantee should make them worth, in these times, the par of 8 per cent., namely, $66⅔. They are now selling at about 62. The arrangement is certainly a good one for the Minehill Company, but is of much greater value to the Reading. That company now virtually commands the immense coal tonnage of Schuylkill County, which in value amounts to millions of dollars, and with the great advantage of the grade of its road to market, can compete with any rival region for the market of the country, fully protecting the producers of Schuylkill County, while it earns most satisfactory dividends to shareowners. There is no company that opens to its owners a more promising future than the Reading.—*Philad. Ledger, Oct.* 5.

Construction of Chelsea Suspension Bridge.

(Concluded from page 929.)

The Chains and Saddles.—The chains of the Chelsea bridge are four in number, two being placed on either side, at a distance apart of 32 feet. They consist of links of seven and eight bars alternately, 8 inches wide, and of lengths varying from 16.55 feet at the towers to 16 feet at the centre of the span, so as to admit of a uniform horizontal distance of 16 feet from centre to centre of the pin-holes of each link, and are connected by pins 4 inches in diameter. The aggregate section of the four chains at the towers is 230 square inches, and at the centre 217½ square inches. The span of the centre opening is 348 feet, and the deflection of the chain is 29 feet. The semi-span of the back chains is 183 feet, and the deflection 30 feet 6 inches. The length of the chain for the centre opening is 354 feet 5 inches, and the length of each of the back chains 186 feet. The mooring chains are placed at an angle of 25°, and are 95 feet long, and have an aggregate section of 235 square inches. The total weight of the chains is 340 tons. The chains are carried over the towers by means of saddles formed of No. 8, 1 inch wrought iron rectangular plates, 5 feet 8 inches long, and 2 feet 10 inches wide, placed at intervals of 1 inch apart, and bolted together by No. 10 bolts. The bottom edges of the plates are planed, and are let into cast iron plate 4 inches thick, also planed on its top and bottom surface, and which moves on ten 6 inch diameter steeled rollers, working on the cast iron bed-plate fixed at the top of the towers. The chains are connected to the saddles in the same way as the links of the chains are connected together. At the abutments the chains are diverted down the tunnels by means of saddles of similar construction to those on the towers, based on cast iron cradles, and placed at right angles to the resultant of the strains.

For mooring the chains the following means were adopted:—As has been observed in the description of the abutments, the tunnels for the mooring chains are closed at the bottom by elliptical-shaped brick domes, against which the York landings are placed at right angles to the angle of inclination of the mooring-chains. The chains pass through holes formed in the centre of the landings (the dimensions in the landings were stated in the description of the abutments). A brick semi-circular arch or invert springs from the outer face of the landings, and connects the two sets of landings of each abutment together, by which means the whole weight of the middle portion of the abutment, it will be seen, is made to resist the pull of the chains. The chains are secured by means of castings, 21 inches deep, abutting against the landings, and are divided each into four compartments, rather more than 2 inches wide, through which the chain-bars (here put two and two together) pass, and are moored by keys driven through the heads of the bars, and bearing against the mooring castings. Keys were here used instead of pins, to allow of an adjustment in the length of the chains. Similar means for adjusting the lengths of the chains were made at the saddles on the towers, but were not needed.

In calculating the length for the chains the curve may be assumed to represent a parabola, though, strictly speaking, the curve of the chains is peculiar to the construction; but, deduction being made for the stretch due to the tension caused by the appended weight, the weight so deducted will be found practically correct. Care should be taken to ascertain the exact distance of the span, as a small error in the horizontal distance will cause a serious error in the amount of deflection. It is well to provide for any discrepancy of this kind by leaving the centre links of the chains the last to be rolled; when, the error being known, it can be rectified without any serious interference with the rest of the construction.

For the erection of the chains four temporary chains were thrown across, made of 2 inch round bar iron, and placed one on each side of the line of the chain to be erected. Upon these temporary chains traveling purchases worked, by which the bridge chains were hoisted and put in place.—Four other and similar chains were thrown across beneath the former mentioned ones, to which timber platforms were suspended, and which served to carry the bars of the chains until the connexion of the links were complete. In the hope that the description may be acceptable, a few observations are subjoined respecting the manufacture of the bars.

The bars for the chains of the Chelsea Bridge were manufactured by the process patented by Messrs. Howard and Ravenhill, by which the head and body of the bars are rolled of one piece, and was effected as follows:—Piles, or, as they are technically called, balls of cleanse l scrap iron, of about ¾ cwt. each, were heated (eighteen balls being the usual charge) in a reverberatory furnace of ordinary construction, and afterwards hammered into slabs about 2 inches thick by a 4 ton wrought iron hammer. The slabs while still hot, were then piled in sets of the weight required for the respective bars, and again heated and hammered into oblong masses of iron called shingle, somewhat wider than the width for the bars, and about 2 feet 9 inches long. The time required for heating the balls of scrap was one hour and a quarter; that is, so much time elapsed from the time of charging the furnace to the withdrawal of the first ball; and the time required for hammering the eighteen balls into slabs was three quarters of an hour. It may therefore be observed, that the last ball withdrawn was nearly twice as long in the furnace as the first ball was; and it may, consequently, be supposed that some of the balls of scrap were too much and others too little heated; but the precautions adopted in the management of the furnace prevent any great irregularity in this respect. The balls first withdrawn were placed nearest the furnace; and, as withdrawn the remaining balls were pushed nearer the furnace, or otherwise, as their state required. The time for hammering a pile of slabs into shingle was about five minutes. By the two heats of hammerings the loss of iron was about 13 per cent.; and after the shingle was rolled into bars the total loss of iron was 20 per cent.; that is the bar weighed one fifth less than the scrap iron weighed from which it was manufactured. For converting the shingle into bars of the required form the shingle was heated to the required temperature in the furnace of the rolling-mills, and was then passed longitudinally through rollers till reduced to a width of 8 inches, and to a thickness of 2¾ inches. It was then transferred to other rollers, and passed through sideways; these rollers being so constructed as to act only on the extremities of the bar, which, by this means, are spread out to the width required for the heads. The bar was then passed again longitudinally through ordinary rollers, till reduced to the length and thickness required; after which, while still hot, it was straightened by being beaten with wooden mallets. The time required for rolling a shingle into a bar was eight minutes.

The next process was boring the pin-holes. In doing this the bars composing each link were placed one on another, and bored by one operation, by which means uniformity of length was obtained. Shearing the heads of the bars to the proper form was the next operation. To do this the bars were fixed excentrically on a table revolving in contact with shears, which, as the table turned, cut off the superfluous portions of the heads.

Every bar of the chains at this stage was tested with a strain of 13½ tons per square inch; the contract requiring, in order to insure material of the best quality, that the iron used should stand this strain without a permanent elongation of more than one fortieth of an inch in a ten feet length; it having been found from experiments made that up to this strain the best commercial iron did not extend more than the very best iron that could be manufactured. It may be observed, that notwithstanding this amount of strain very few of the bars had to be rejected.

The last process in the manufacture of the chains was numbering the bars and lettering the links, that there should be no mistake in erecting the chains, as to every bar being in its proper place. A few words will suffice to explain how this was carried out. The chains were divided into eight portions, and named A, B, C, D, E, F, G, H, respectively. The chain A extended from the moorings on one side to the centre of the bridge, where it was joined by the chain B, which continued to moorings on the other side, and so of the other three remaining chains. The heads of every bar of every link were then stamped with the letter of the chain to which it belonged, and numbered; the heads of the first links at the moorings being numbered 0, and the heads of the other extremity of these links 1.—The heads of the second series of links were numbered 1 and 2; of the 3d series 2 and 3; and so on throughout the whole length of the chains. The bars of every link were also numbered 1, 2, 3, 4, 5, 6, 7, 8, showing the position they occupied in the link during the operation of boring.

The engineer considered it highly advantageous to the successful completion of this part of the bridge that the chains were prepared by Messrs. Howard, Ravenhill & Co., who spared no pains and no expense to carry out his instructions to produce a perfect structure; and so far from their making any attempt to evade any condition of the contract for their own advantage, the perfection of the work was their chief consideration.

It will show the excellence of the iron they produced to state that, whereas the late Mr. Barlow deduced that the stretch of iron was at the rate of one ten-thousandth part of its length for each ton, the iron which Messrs. Howard, Ravenhill & Co. produced for the bridge only stretched from one fifteen-thousandth to one fourteen-thousandth part of the length per ton, being above fifty per cent. less than Mr. Barlow's.

As so much depends upon an honorable contractor in the execution of a work, Mr. Page authorized me to make these observations in justice to Messrs. Howard, Ravenhill & Co.

Of the Probable Load.—Before considering the strain to which the chains are liable, it would be be well to investigate the amount of load to which a bridge may be subjected.

M. Navier, a great authority on suspension bridges, calculated the load likely to occur on a bridge at 42 lbs. per square foot. The standard proof for suspension bridges in France is 200 kilogrammes per square metre, which amounts to 41 pounds per square foot, the proof load required by the French Government.

For troops on march, 21 inches in rank and 30 inches in pace are allowed, giving 4.37 superficial feet per man; which, at 11 stone each, would be 35¼ lbs. per square foot.

The load taken in the calculations for the Menai Bridge was 43 lbs. per square foot super.

An experiment was made by the engineers of the Chelsea Bridge, by packing picked men on a weigh bridge, with a result of 84 lbs. per superficial foot; but it is not within the limits of probability that such a crowd could accumulate on any bridge.

Seventy pounds per square foot of platform are assumed as a standard for the load that may come on a bridge; as being the utmost load that the platform could hold; supposing it, in fact, quite filled with people crowded as close together as they could be. This, it is true, is not often likely to happen; but it may do so on a public occasion; and needs, therefore, to be provided for.

The march of cavalry, or the passage of cattle, is not so productive of dangerous effects as troops on the march, inasmuch as cavalry take up more room in proportion to their weight and do not preserve a uniform pace.

As regards the greatest moving load or crowd, it is an acknowledged fact that it is impossible for a body of people on the move to occupy per man less space than trained troops; and as I have before shown that troops on the march do not produce a greater dead weight than 35¼ lbs. one may safely assume that the dead weight due to a moving crowd will not amount to so much.

Of the Strain on the Chains.—Having described the various loads that may come upon a bridge, it

may be useful to show the strain produced on the chains of the Chelsea bridge under the several circumstances.

The strain on the chains from their weight alone is 1 1-10 ton. The strain from the weight of the platform and road alone is 3.32 tons, giving a total strain produced by the structure alone of 4.42 tons, or 9.08 tons below the proof strain.

The strain on the chains from the weight of the structure and a load of 70 lbs. (being the weight per square foot of a dense crowd) is 7.60 tons—or 5.9, nearly 6 tons, below the proof strain; so that the chains will carry in addition the weight of the structure nearly three times the greatest crowd that can come upon the bridge, before the proof strain is arrived at. Taking the breaking strain of the chains at 28 tons, we should require seven and a half times the greatest possible load to be brought on the bridge to produce that strain.

Before concluding these observations on the Chelsea bridge it may be interesting, without taking into consideration the high quality of the iron, to compare the strain on the chains with other suspension bridges: and for this purpose I may refer to the Hammersmith and Pesth bridges as fine examples of bridge engineering; both being built by the same engineer, Mr. Tiernery Clarke, at distant intervals; the Hammersmith bridge having been open 36 years, and the Pesth 14 years.

The Hammersmith bridge is 710 feet 8 inches between abutments, the span of the main opening is 442 feet 6 inches, the deflection is 29 feet 6 inches, the useful width of platform is 30 feet, the sectional area of the chains is 180 square inches, the weight of a square foot of road 63 lbs., and the strain per sectional inch upon the chains from a load of 70 lbs. is 8 86 tons: the chains were proved up to 9 tons, leaving a margin of 14 tons between the proof strain and the strain from the greatest load.

The Pesth bridge is 1262 feet between abutments, the central span is 666 feet; the deflection of the chains is 47 feet 6 inches, or 1-14th of the span; the available width of roadway is 36 feet 3 inches; the weight of a square foot of suspended roadway is 74 lbs., and the chains have a sectional area of 510 square inches.

The strain produced on the chains with a load of 70 lbs. per square foot is 7.72 tons, or 1.28 tons below the proof strain, all the bars having been proved up to 9 tons.

The margin or allowance between the strain from the greatest load and the proof strain is therefore as follows:

Hammersmith Bridge	.14 tons.
Pesth Bridge	1.28 tons.
Chelsea Bridge	5.9 tons.

Our Canal and Railway System.

In no part of the world is there such a vast net work of Railways as in the United States; never elsewhere was so much work accomplished in so short a time. This is not only in consequence of the natural enterprise of the people, but the spirit of emulation among them as inhabitants of rival and ambitious States. If ours had been a single consolidated Government, it is more than probable from the vastness of the area to be traversed, and the facility with which opposition from remote parts could have been brought to bear and concentrate upon any one project of the hour, no matter what its merit, there is little doubt that our present Railways would have occupied a hundred years or more for their construction. Our system has been and will be one of our elements of strength. The States have always had and will yet always have enough to do, to fulfill their original purpose, without claiming the exercise or rights of nationality, and sovereignty, to which some of our erring brethern have pretended, and by which they have befogged themselves and lost their way. There never was any such thing in this country as a state sovereignty. The first Congress was an assembly of delegates from provinces under charter or proprietary governments, subject to the Crown, which for a long time after the revolution broke out, declared their desire and intention to return to their allegiance, when their very reasonable propositions were accepted. The first idea of the formation of States came from a resolution of Congress recommending it, and from that day to this, whether in the old confederation or under the new constitution they have been fully and entirely subject to one and the only sovereignty, that of the Nation in Congress assembled. Mr. Madison was of this opinion as will be found by reference to the debates on the adoption of the constitution.

In the sphere then which the States have occupied and should still occupy, their functions have been remarkably well exercised and in nothing more than in encouraging, establishing and maintaining the great channels of domestic intercourse, either within their own limits, or by connecting them with their neighbors. The best thing a State could do, or its Governor and Legislature could do, was, not to meddle eternally with abstract questions of National policy or our foreign relations, but to see that their own citizens were well and happily employed, educated, protected, advanced; that their industry was rewarded, their facility of intercourse and transit extended to its utmost possibility, and that Religion, Education, Industry and Commerce were their common blessings. The Canal system under this early view of the nature of our State Governments was the first object of development. No less than seventy seven canals great and small, exist in various parts of the United States, the work of long years of care and expenditure. About thirty five hundred miles of canals were accordingly furnished and put in successful operation. The longest lines constructed were as follows:

The Erie	350 miles.
The Ohio and Erie	307 "
The Wabash and Erie	379 "
The Genesee Valley	107 "
The Delaware and Hudson	108 "
The North Branch Pa	105 "
The West Branch and Susquehanna Pa	117 "
The Pennsylvania	156 "
The Erie, Pa	136 "
The Chesapeake and Ohio	184 "
The James river and Kanawha	147 "
The Miami and Erie	178 "
The Illinois and Michigan	102 "

Upwards of forty other canals of various sizes under one hundred miles in length were built in connection with navigable rivers and natural water routes, North and South, thus creating the largest and most useful artificial water communications in the world, with the exception of those of China.

The discovery of the Steam Engine as applicable to the propulsion of vessels, led to driving locomotives on iron roads. This created the present railway system, and immensely enlarged the sphere and the power of human industry. In 1850 these railways in the United States extended in length 8,588 miles. In 1860 their aggregate length was 30,592 miles, and in 1862 our railways open and in progress of construction extended 51,114 miles. Every year since, the extension of the system has gone on. The new states and territories are continually increasing the demand for them, and the great Pacific railway is already commenced, with a vigor which ensures its construction at an early day.

In looking at a railway map, we discover some curious features. One of the first objects of the system was to reach the seaports whether on the Atlantic or the Gulf, then the great towns on the Northern lakes, then connections between great commercial centres, inland and on our navigable rivers. Natural routes, those of which Nature had been the Engineer, were sure to be selected, for the comparative ease of their grades. It has been suggested that in the Southern States, there were accompanying considerations with regard to location in view of future military operations, even when Northern capital was employed in the construction. Another policy has prevailed to a remarkable degree, that of tapping great lines by transverse connections, and creating parallel lines when the traffic promised to be enormous. Looking at the map we see that the state of New York has its principal net work of railways West of Utica, having a Northern and Southern direction; while the East half of the State as determined by a line drawn from Ogdensburg to Port Deposit on the Delaware, shows a vast blank with but two principal lines runing eastwardly and westwardly through this large space. The mountains of both regions simply making direct and long lines impracticable even if they were necessary. It is extremely to be regretted that the Lake Ontario and Hudson River Railway has never been constructed, for it would have opened up a timber and iron region as valuable as any of that class in the North. In the State of Virginia we perceive but two long lines, very circuitous, one connecting with the Ohio, and the other with the Gulf, several others of less extent and more direct, with ports on the Atlantic, as Wilmington in North Carolina, which accounts for its being a favorite and convenient place of resort for the blockade runners. In Kentucky from two points, Lexington and Danville, the chief railways diverge North and South, from the line between those two places like the sticks of two fans with a connecting handle, Indiana, Illinois and Ohio, are crossed in all directions by railways at large angles. Those in Missouri few in number, struggle off Northwardly, Westwardly and Southerly, apparently without termini, receiving at two points on its river of the same name, all that it requires from the East, at St. Louis and Cairo. But we have not time to complete this birdseye view of our railway system. We may refer to it again, as it shows us the tendency of our internal trade and traffic, the march of population, and the direction in which the star of Empire takes its way.

Philadelphia Passenger Railways.

Our city railroads are being extended with great rapidity, and no great length of time will elapse before every point of our city and suburbs will be in easy reach of the business centre through the agency of these roads. There is now in contemplation a railway from Frankford to Holmesburg, a distance of four miles, and thence to Bustleton, two and a half miles, or six and a half miles in all, passing through a beautiful portion of our city suburbs, and accommodating a large and increasing population. The books of subscription to the stock of this company will be opened on the first of October, at Holmesburg, and already assurances are given that the stock will be readily taken and the construction of the road prosecuted with energy.—*Philad. Inq.*

A Northern Pacific Railroad and Telegraph.

Our readers will remember a paragraph in our paper a few days since, stating that C. J. Brydges, Managing Director of the Grand Trunk Railway, and several other gentlemen prominent in Canadian commercial enterprises and Canadian politics, were at St. Paul perfecting arrangements to build a telegraph line from that city to Fort Garry, and thence up the valley of the Saskatchawan across the Rocky Mountains to the Pacific. Some of the gentlemen referred to have returned, and from them we learn that the early completion of the line is placed beyond any probable contingency. Indeed, matters have so far progressed that it is expected that it will be all finished during the next summer. Our readers are already informed that the Russian Government are building a line across Asia, down the valley of the Amoor, and thence it is to run to Behring's Straits, where it will meet the line or lines across the American continent, thus connecting the new and old world in bonds which it is to be hoped will never again be severed. The building of this new line will be a source of much benefit to our own country as well as to Canada. The California company will no longer have a monopoly of the news between the Western and the Eastern coasts of the continent, and besides the Northern route is something like a thousand miles the shorter, costing less and therefore able to make better terms for the transmission of dispatches.—Another fact connected with this subject indicates a new and most important movement in the development of the American continent. It is the intention of the company to promote and establish a cordon of settlements at short distances entirely across the continent. Our readers will remember that, with the exception of the one surveyed by Stevens for the Pacific railway, the Northern route, from the capacities of its soil and climate is the only one that can sustain a prosperous population from the Atlantic to the Pacific. Recent discoveries have proved beyond a question that large gold deposits exist upon the headwaters of the Saskatchawan, and a railway is already projected west from Fort Garry. Perhaps in one and probably in two decades at most we shall have a direct line of railway over this northern route across the continent. The readers of these columns know that north and west of Lake Superior, lies what has been appropriately called "the undeveloped portion of the North American Continent"—a country vast in extent, and whose agricultural, mineral and commercial resources fit it to contain an immense population, with all that can promote and sustain the highest type of our Christian civilization. Not many generations can pass before it will become a vast and powerful empire in itself.

The civilized world has long known that the policy of the old Hudson Bay Company was borrowed from Japan. They always did all they possibly could to discourage settlement, and a knowledge of the climate and the resources of the country they governed was carefully concealed from the public eye. Recently the franchises of the old organization have passed into the hands of a wiser and more energetic company, who have adopted a policy in accordance with the more just and liberal views of the age. They will promote the settlement of the country by all the means in their power, and the line of telegraph now projected is the first fruit of their enlightened management.

In this connection it gives us pleasure to add that arrangements have been perfected to push forward the Pacific Railroad of Minnesota to meet the wants of this new development. It will probably reach the British American line in the vicinity of Pembina, and thence be pushed forward to the valley of the Saskatchawan much sooner than our most sanguine readers would dare to predict. It is understood that the President of Company, Mr. Edmund Rice, has made arrangements with English capitalists to furnish funds for the work as fast as they shall be wanted to carry it forward with all reasonable dispatch. And right here the deep interest which our city and the Northwest have in these movements can be readily seen and appreciated. The outlet for all the vast fertile country of which we have spoken, and of this projected railway to the Pacific, must, from the nature of things, be around the south end of Lake Michigan. The country north of Lake Superior, for many hundreds of miles, is too mountainous, cold and inhospitable to allow of a connection between the Grand Trunk Railway of Canada and the great northern road to the Pacific. Right here in Chicago is where these great continental lines will find their most southerly trade, and here is the great central city of transfer and exchange for both seaboard of the continent. Of their effect upon the prosperity and the destiny of our city, it were useless here to speculate.—*Chicago Tribune.*

Illinois Central Railroad.

This road is now attracting more attention from our capitalists than any other in the West. It is a new thing for our people to buy railroad stocks of any kind, as heretofore there have been other channels where capital could be used more advantageously and profitably than in dividend-paying railroad stocks.

We learn, on good authority, that parties here have purchased over twenty thousand shares of the stock within the past month, and as they have a thorough knowledge of its value, we have no doubt but that it will prove a profitable operation to them. But in order to give the outside public some idea of the real value of this road, we have gathered up the following facts in regard to it:—

Whole bonded debt of the road	$14,500,000
Capital Stock	17,500,000
Total	$32,000,000

The assets are as follows:

Bonds and mortgages secured on land	$11,000,000
1,200,000 acres of land, at $15	18,000,000
Cash in bank	2,000,000
Total	$31,000,000

This shows enough, within a million dollars, to pay off the bonded debt, and to pay back to the stockholders the par value of their stock.

In addition to this, the company has the largest amount of rolling stock of any road in the West. It is at present composed of over 3000 first-class freight cars, 100 passengers and mail cars, and 150 locomotives, all finished in first-class style and with the latest modern improvements.

The estimate of $15 per acre for their unsold lands is low, as some of the best farming lands of the State are yet held by them. The sales of lands are now made in small parcels, to be cultivated and improved. Of the last 2000 sales made by the Company, the average quantity of each sale has been only sixty-seven acres. The eleven million of land notes, secured by mortgages on lands heretofore sold by the Company are good beyond a doubt. The principal of these notes has already been reduced by payments over 25 per cent., which leaves the balance undoubtedly secure. The interest the present year will amount to more than all the principal paid on them in 1861, and the fact that the lands mortgaged are, from the improvements made on them, worth, in most cases, three times the amount of the incumberances, will insure the certain payment at maturity of all the mortgages.

The Road this year, with its great feeder, the Mississippi river, closed, will earn the enormous sum of $4,500,000. Deduct 50 per cent. for operating expenses, which is more than the average for the past two years, and it will leave $2,250,000, net earnings, which will pay over 7 per cent. on $30,000,000 of capital stock. This, too, with the country only one-third settled along the line of the road. If our State goes on filling up the next five years as it has the past five, it will be safe to calculate upon an increased traffic to the road of at least 25 per cent. per annum. The road does not owe one dollar of floating debt, is in perfect order along its whole length, and has replaced nearly all its old wooden bridges with iron ones, which will stand a century. At an early day, the company secured a large tract of land for depot purposes, which is now in the business portion of the city, and very valuable. Should they find it to the advantage of the road at any time hereafter to remove their depots from their present situations, the lands on which they stand would quickly sell for upward of $3,000,000.—*Chicago Tribune, Sept.* 28.

Flax Commission.

Under the appropriation of $20,000, by the last Congress, to test the qualities of flax, and the best modes of proparing it for manufacture, Hon. J. H Morehead, of Pittsburg, Dr. J. D. Warder, of Cincinnati, and W. M. Bailey, of Providence, R. I., have been appointed the Commissioners. They may be addressed at Agricultural Bureau, Washington.

Presentation.

Mr. R. S. Allen, having retired from the situation of Superintendent of the locomotive department in the New Brunswick and Canada Railroad Company, has been presented with a gold watch and appendages, by his subordinate officials, in token of their esteem for his valuable services and kind deportment.

Railroad Earnings--Weekly.

The traffic of the Great Western Railroad for the week ending Sept. 25, 1863, was as follows:

Passengers	$27,321 06
Freight and live stock	32,093 54
Mails and sundries	1,314 16
Total	$60,728 76
Corresponding week of 1862	65,334 91
Increase	$4,606 15

The earnings of the Grand Trunk Railway for the week ending September 19, 1863, were:

Passengers	$42,121 43
Freight and live stock	49,752 64
Mails and sundries	2,800 00
Total	$94,674 07
Corresponding week, 1862	73,632 66
Increase	$21,041 41

The approximate earnings of the Marietta and Cincinnati Railroad, in the 4th week of September,

1863, were	$29,252 00
Do., 1862	17,160 00
Increase	$12,092 00

The earnings of the Chicago and Rock Island Railroad for the 4th week of September, 1863,

were	$50,596 00
Do., 1862	35,296 00
Increase	$15,300 00

The earnings of the Chicago and Alton Railroad for the 4th week of September, 1863, were:

Passengers	$16,356 58
Freight	23,983 92
Sundries	1,059 23
Total	$41,399 73
Same week last year	28,070 50
Increase	$13,329 23

Joliet road proportion is included for both years.

The earnings of the Galena and Chicago Union Railroad for the 4th week of Sept., 1863, were:

Freight	$63,188 32
Passengers	13,981 38
Mails	1,300 00
Total	$78,469 70
Same week, 1862	62,165 46
Increase	$16,304 24

RAILROAD EARNINGS—MONTHLY.

	January.	February.	March.	April.	May.	June.	July.	August.	September.	October.	November.	December.	Total.
Buffalo, New York and Erie:													
1861	36,633	37,426	49,194	58,881	56,174	45,993	46,417	45,516	51,212	73,432	79,409	78,783	657,070
1862	67,862	56,876	78,265	74,056	67,589	62,167	59,523	51,429	74,084	83,324	84,322	91,398	850,845

American Railroad Journal

Saturday, October 10, 1863.

☞ The *postage* upon the AMERICAN RAILROAD JOURNAL is only *five cents per quarter*, if paid *in advance* at the Post office where the paper is received.

Stock Exchange and Money Market.

We are again in the midst of a rising market, with fluctuations somewhat unexpected in the prices of gold and exchange. Contrary to the general wish, the former has been steadily going up, and foreign bills have followed in the wake with the usual regularity. Their movements are necessarily in concert, though sometimes they change places in the procession, each leading the other as circumstances direct. Considerable amounts of specie have recently been shipped as a natural consequence of the vast consumption of foreign goods which the plentifulness of money creates and stimulates. As long as our importers find a profit in importing, and purchasers for cash

to an extent they have rarely had before, we must expect to see gold and exchange in demand, and more so this season than usual, because the foreign grain crop has been unusually large and satisfactory. Looking over the British board of trade returns for the half years of 1862 and -'63, from January 1, to the 30th June inclusive, we perceive what our trade with England has been during those periods, and can only wonder that the British ministry have ever for a moment risked its loss by its sham neutrality. The aggregate of its exports to its twenty-four foreign possessions, great and small is as follows:

	1862.	1863.
To its colonies.....	£12,448,545	£20,396,437
To Germany.....	5,701,050	5,514,890
To France	2,786,932	4,537,562

With Italy and Holland it was about half that amount, with Spain, Brazil, China, a little more than half of that, while with the United States, or rather the loyal States of the Union, it was in 1862, £6,449,618, and in 1863, £7,003,128. To go still further. The whole amount of British exports during the six months to all the world, was in 1862, £57,314,679, and in 1863, £62,014,197. Thus we see that our own trade requires and is equal to one-ninth of British foreign and colonial trade, and the only one habitually which makes large remittances in gold, and in fact the only nation in the world, that from its own mines is able to do so.

We also perceive that this trade of ours takes more from England twice over or nearly, than she sends to all Germany or France, is one-third as great as that of her whole colonial possessions on which she expends such vast sums to retain in subjection, and almost four times as much as is required by Italy and Holland, and still much more than is exported to Spain, Brazil and China. It is needless to pursue the comparison, with the trade to any other commercial countries, as the difference is too enormous to afford any necessity for the comparison.

Now the reflection naturally arises, is it worth while for England to gratify its political jealousy of this country, or envy of its rising greatness and lose the advantage of having such a customer, ready to feed her starving population whenever they are crying for food, or equally ready to pay what it owes in gold and silver? Does it show the least spark of statesmanship in British Lords to assist in breaking up this nation, or in British merchants to cut off the best ready money customers they have in the wide world? And yet to this end were our differences fast bringing us until within a few weeks past.

From this view of our commercial and financial connection with England let us turn to our own. Here we find the element of strength and confidence increasing every day. The people as fast as they earn money through the war expenditure, or the profits of ordinary trade are lending it to the Government. The demand for Government securities is on the increase. Even the inquiry for foreign account is getting to be large. The receipts from customs in gold are twice as great as the amounts of interest falling due. Still more surprising, the receipts at the Internal Revenue department are also increasing. For the month of September they were $6,136,205 43, being half a million more than in any previous month. It was the remark of a new correspondent of the London *Times* writing from Saratoga in August, that he was perfectly astonished at the willingness or rather eagerness of the people of the North to pay their taxes, and still more at the composure if not complacency with which they regarded the war debt. There is no doubt that at no period in our history was there ever such a spectacle. We doubt if the history of any other country can present such a one.

The condition of our public debt, at the periods named below, was as follows:

	Five twenties.	Other securities.	Total debt.
April 1...	$86,593,856	$845,952,624	$882,546,480
July 1....	185,684,141	911,590,224	1,097,274,365
Sept. 1...	256,695,100	977,780,000	1,244,430,200
" 30..	264,701,000	992,100,000	1,256,801,000

From this we perceive that the public debt is not increasing as fast as predicted, for while from April to July it had increased by $214,727,885, from July to October it had only increased $12,320,800. Indeed it is confidently asserted in official quarters, that the *income of the Government from all sources is equal to* the aggregate expenditure; a most astounding, interesting and gratifying result. Certainly the financial success of Mr. Chase is without a parallel, and what is better the spirit and resources of the North are also without a parallel. In connection with this view of the subject, every financial writer is bound to take notice of the patent fact, that the confederacy is rapidly on the wane. "Exhausted nature," once said an Englishman of note, in relation to a pending conflict in his own day, "can hold out no longer." The currency of the South is practically worthless. Most of the necessities of life require fabulous amounts of money for their purchase. Intercepted letters show the general conviction that the efforts of the rebels are hopeless. Intelligence obtained from deserting soldiers, from unhappy fugitives, and even from the most reckless and arrogant of the Southern presses, edited under the eye of Jefferson Davis himself, comes to us daily, that all confidence of success is lost among the rebels of every class and condition.

Every apple rebellion plucks from the tree turns to ashes in their hands; and nothing appears more certain, that with the exercise of even a moderate share of ability in our Government the confederates are sure to be overthrown. Even its envoy at the Court of St. James, or rather its purlieus, has been obliged to withdraw his trembling limbs from the door where he has sought relief. And as to the hope of recognition and intervention from France, we imagine that Louis Napoleon is too shrewd under the present aspect of affairs to venture upon such a step. When at public meetings in England within the last two or three weeks, men of influence have called on their Government to withdraw the Queen's proclamation of neutrality, because the rebels have not been able to maintain even the decent appearance of belligerents, but have fallen back by impotence and disaster into the character in which they first appeared, the statesmen of France will remind the Emperor that it is not for him to become this time at least the friend of rebels. It is indeed a thousand pities that our own Government made the mistake of treating the confederates in any other light, since an act of Congress closing the Southern ports would have been a wiser step, and obviated the necessity of any appeal to international law, or the application of our naval force in the shape of a blockade.

We look for strange changes in Europe, when it hears that one Russian fleet is to winter in New York, and another in San Francisco. We imagine "it will change the hand and check the pride" of many a Foreign Government anxious for our fall.

It is a fortunate circumstance no doubt that loans from abroad were not sought for by Mr. Chase. While on the one hand it would have made its holders our friends *pro tanto*, on the other it would have caused a large exportation of gold for interest. Now the interest paid on the Government loans has been mainly employed by our people at home, and has been largely capitalised and turned into new means of production. It is a sort of compounding of interest of which the nation gets the exclusive benefit, and by which it becomes so much the stronger.

So, too, if the foreign demand now increases largely, it will be an aid in the future to facilitate the resumption of specie payments, since all that is so absorbed is the same as a remittance of specie to this country. So come what may, we are to get out of a paper currency with but little damage. Apropos of our immense metallic resources, existing in Colorado, Idaho and Arizona it may be well to state that mines of lead have been recently discovered at or near Marquette, Lake Superior, which produce $300 worth of silver to the ton. Here we have another timely addition to the resources of the Government; and what does our national debt of $1,200,000,000 amount to, when we have according to Dr. Willing, and other undoubted authorities, billions of gold in the surface mines and washings of Colorado alone, and underneath solid masses of the pure metal. He who falters in his estimate of the National wealth is deaf and dumb and blind. The aggregate of our exports of produce and merchandize, for the week ending on Tuesday, was $2,473,669, and the balance in the Sub-Teasury on that day was $30,515,248 26.

As we go to press we learn that very large amounts of stocks, nearly three quarters of a million, bonds of 1884 and 5 20's went out in Wednesday's steamer, while in the steamer of Saturday previous nearly a similar quantity went forward.

We may expect this state of things to continue since by the last European arrivals, we hear that the general impression abroad is, that the Confederates have now only two points of defence left, Charleston and Richmond. This is the view taken even by the foreign sympathizers themselves.

We give as usual complete and correct tables of the movements in our money market.

The following quotations of sales of Railway and other securities are in addition to those given elsewhere in our columns:—

New York.—McGregor Western R. Albany and Susquehanna Railroad.

It is but three weeks since we had the pleasure of noticing the formal opening of 35 miles of this road, extending from Albany to Central Bridge. Thence to Oneonta, 45 miles, the road is all under contract, to be completed in the course of another year. Proposals are now invited by C. W. Wentz, Esq., Chief Engineer, for the construction of 45 miles more, extending from Oneonta, in Otsego County, to and including the Tunnel of about 2,000 feet through Webster Summit in the town of Colesville, in Broome Co. The line will be ready for examination on the 19th inst., and maps, plans, profiles, etc., may be inspected, on and after that date at the engineer's office, Unadilla, Otsego Co., N. Y. This will leave but about 15 miles to complete the road to Binghamton.

Sleeping Cars! Sleeping Cars!!

We invite the attention of Railroad companies, and the travelling community, to the Advertisements of the *"Central Transportation Company,"* published elsewhere in our columns.

In respect to elegance, convenience and the means of comfort to the traveller, these cars in their internal arrangements, neatly furnished state-rooms and berths, very far excel all others now in use. They are owned by the Central Transportation Company, and conducted by them on the Pennsylvania railroad, the Bellefontaine Line, the Northern Central and the Central New Jersey railroads, under arrangements severally made with these companies, and in a manner not only highly satisfactory to the companies, but (as evinced by the rapidly increasing patronage and other evidences given by the travelling public) in a manner also greatly admired by them. Although this company conduct on other roads, sleeping cars under contracts with the several companies, which serve much to relieve the fatigue of travel, yet *none of these, and only a portion of the cars running on the roads above named, contain the company's recent improvements;* all of the company's cars, however, are, as is understood, soon to receive them.

The cars of this company, containing their recent improvements, seem to be rapidly growing in public esteem; and the convenience they afford the night traveler for quiet and repose, so far surpasses all other modes, that the interest of railroad companies would, under like conditions and considerations as mutually arranged by them with other railroad companies, unquestionably be benefitted by their adoption on all through night lines.

As the Central Transportation Company own, and will control the use of these plans, such railroad companies as are now using an inferior plan, also such companies as would increase the popularity of their lines by the introduction of sleeping cars on their roads, would do well to conclude, at the earliest practicable period, arrangements with this company similar to those of other companies; which would in like manner secure the quiet and permanent use of the best plan, thereby advancing the interests of such railway companies, (by drawing in many instances to their roads an increase of trade,) as well as promote the comforts of the traveller; and these without the danger of infringing patents and being subject to litigation in the future.

Cape Cod Central Railroad.

At a meeting of the directors of this road, held in Brewster on the 25th ult., the plans and estimetes were submitted to them and approved, and the capital stock of $200,000 was all subscribed. The necessary papers completing the location of the road were duly prepared and filed with the County Commissioners. It is expected that the whole line will be under contract in a few weeks, and that the grading will be completed next spring.

Bessemer Steel Rails.

In their last report, the Directors of the London and North Western Railway Company state that they have been making trials at various points of a new description of rail, made of steel by Bessemer's process. The results are important and satisfactory. Some of these rails were laid down at Rugby, Stafford and Crewe in March, 1862, and are wearing well. In May, 1862, some were laid down at Camden parallel with the best description of iron rail. So severe was the test that the iron rails speedily gave way, and had to be frequently removed worn out, while the steel rails continue to show little appearance of wear. Having regard to the importance of procuring the most efficient rail, so as to avoid the frequent renewal now found necessary on the main line and in the principal stations, the Directors have deemed it expedient to adopt and substitute the steel rail to that extent at least; and, having agreed with Mr. Bessamer as to the royalty to be paid for the use of his patent, they have made the needful arrangements at Crewe for the production of steel to the extent of 19,000 tons per annum.

Canadian Ports of Entry.

An important Government order which took effect on the 1st of September last, has changed the character of many of the Canadian Ports, of which fact our own shippers and merchants trading with Canada should take notice. The following ports of entry are abolished, viz., Beauce, Coteau du Lac, Three Rivers, Maitland and Milford. The two last are reserved the privilege of exporting. The following out ports and out stations are also abolished, viz: Beamsville, Smithville, Thorold, Eaton, Grafton, Huntingdon, St. Anicet, Colchester, Mersea, Lindsay, Morpeth, Rondeau, Pembroke, Ryerse Creek, St. Hyacinthe, and Sorel.

A New Steam Engine.

A steam engine has been invented by J. R. Root, of this city, one of which is driving the works in a large machine shop in 28th street, and another drilling the armor plates for the iron clad Dunderberg. It is a remarkable machine in respect to its size and power. In a space 18×10×12 inches, it has a combined piston area equal to the power of nearly 23 horses. The stroke of the piston rod is very short, only 2½ inches. The piston rods are square and two in number. All the movements are in right lines and no shock or jar is produced by them. There is "no rod, link or toggle" to communicate motion to the crank from the piston rods. A strong man can carry the whole apparatus under his arm. Of course it is a high pressure engine. We may inquire into its cost and applicability to machinery, and if so will publish the results. Such engines if really what this is represented to be, must play an important part in our manufacturing establishments.

New York Canals.

The quantity of flour, wheat, corn, and barley left at tide water from the commencement of navigation to the 30th of September, inclusive, during the years 1862 and 1863, was as follows:

	Flour, bbls.	Wheat, bush.	Corn, bush.	Barley, bush.
1862.	936,100	21,161,300	15,038,400	442,900
1863.	848,600	12,197,300	18,313,100	255,000
Dec.	87,500	8,964,000	*3,274,700	187,900

* Increase.

By reducing the wheat to flour, the quantity of the latter left at tide water this year, compared with the corresponding period of last year, shows a deficiency equal to 1,880,300 bbls. flour.

The following comparative table shows the quantity of some of the principal articles of produce left at tide water from the commencement of navigation, to and including the 30th of Sept., in the years indicated:

	1861.	1862.	1863.
Canal opened.	May 1.	May 1.	May 1.
Flour, bbls	787,700	936,100	848,600
Wheat, bush	16,537,100	21,161,300	12,197,300
Corn	14,864,800	15,038,400	18,313,100
Barley	269,100	442,900	255,000
Oats	3,546,200	3,074,200	5,573,800
Rye	503,000	606,400	281,200
Beef, bbls	1,100	11,400	9,890
Pork, bbls	6,100	150,500	227,900
Bacon, lb	568,900	5,307,300	3,441,100
Butter	282,800	825,900	153,900
Lard	719,700	7,682,100	18,582,600
Cheese, lb	477,700	925,600	841,200
Wool	1,272,400	1,575,900	105,600

Illinois Central.

To the Editor of the Railway (London) Times:

SIR,—Amongst the many anomalies in the prices of railway stocks, can any of your readers explain the following, in reference to the shares in the Illinois Central? The shares, $90 paid, are selling at about 80; the shares, $100 paid, are also selling at about 80! The difference in price is generally not more than $1 per share, although one series of the shares is receiving (as above) dividend on $100 and the other on $90; I am aware that the larger amount has received by prepayment a dividend of $2 per share, and that to that extent the $90 shares have a claim for preference in value; further, if a $90 share be valued at about 10 dis., the same calculation would make the $100 11 dis. This explains $3, but what of the other $7 is the mystery?

The whole stock is rapidly rising, justified by a present traffic that indicates 7 or 8 per cent. dividend (quite independently of the singularly valuable land resources,) and yet the relative distance in market value continues.

I am curious to witness the result when the shares command a premium. Will the dividend and value of the extra ten dollars, in a dividend paying line which commands a premium, be considered an evil, and prejudice the holder in the market in comparison with a stock receiving a smaller dividend?—I am, &c.

JOHN BENSON.

[We understand that the $90 shares are bought in the English market to supply sales made in NewYork, where the "Bulls" are trying to "corner" the Bears, and will not take paid-up shares in lieu of $90 in fulfilment of contract.)—*Ed. R. W. Times.*

Valuation of Portland.

The valuation of Portland for the year 1863, is $25,111,204, of which $14,423,000 is real, and $10,688,204 personal. Increase in one year $1,804,500, principally in personal estate. In 1850 the valuation of the city was only $13,364,238, showing an increase of $11,746,976 in thirteen years. The amount raised by taxation is $369,559, and the rate $1 44 per hundred.

British Railway Equipment.

The number of locomotives possessed by English companies at the close of 1862, was 5,140; of passenger carriages, 12,584; of other vehicles attached to passenger trains, 4,891; of wagons or trucks used for the conveyance of minerals, live stock, and general merchandize, 153,589; and of other carriages or wagons, 4,270—making a total of 180,474. At the same date the number of locomotives at work on Scottish railways was 885; of passenger carriages, 1,854; of other vehicles attached to passenger trains, 623; of wagons or trucks used for the conveyance of minerals, live stock, and general merchandize, 27,952; and of other wagons, 188—making a total of 31,503. The railways of Ireland, again, possessed at the same date 373 locomotives, 927 passenger carriages, 423 other vehicles attached to passenger trains, 5,513 wagons or trucks used for the conveyance of minerals, live stock, and general merchandise, and 309 other wagons—making a total of 7,545. We thus arrive at a total for the United Kingdom of 6,393 locomotives (which, at 2,600*l.* each, would represent a capital of 16,634,800*l.*,) 14,565 passenger carriages, and 197,758 vans, trucks, &c.—making a combined grand total of 218,716. The value of this immense plant must be estimated at 40,000,000*l.* It may be added that each mile of railway in England possessed last year 22 vehicles of various kinds (including locomotives,) while each mile in Scotland had only 18, and in Ireland barely 5.

BROWNE'S METALLIC WEATHER STRIPS AND Window Bands.

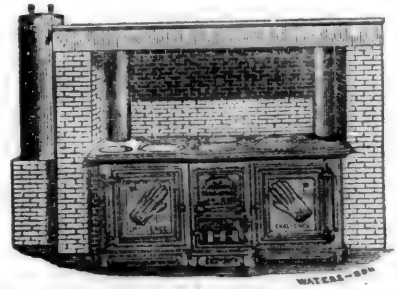
TOTALLY exclude rain, wind and dust from, and stop the rattling of doors and windows of every description, without interfering with the free use of the same at all times. They save one half the fuel in winter. For Circular, with references, address the PATENT METALLIC WEATHER STRIP CO., **212 Broadway, corner of Fulton st.**
Local Agents wanted everywhere. 6m41

Sanford's CHALLENGE HEATERS SET IN BRICK, PORTABLE OR AS

FIRE PLACE HEATERS,

FOR WARMING BY ONE FIRE WITH PURE, SOFT AIR
Dwellings, Churches, Hotels, Public Halls, Railroad Depots, Vessels, etc.,
WITH AND WITHOUT REGISTERS.
THE MOST POWERFUL HEATERS AND THE
Greatest Fuel Savers in the World:
With an unparalleled mass of unimpeachable testimony of well-known Citizens, Ministers, Doctors, Lawyers, Merchants, Mechanics and others.

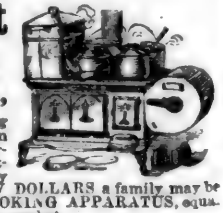
Send for pamphlet containing full description and testimonials.
SANFORD, TRUSLOW & CO.,
Nos. 239 and 241 Water st., N. Y.



Central Transportation Co.

THIS Company, a Corporation organized in pursuance of a General Act of the Legislature of the State of Pennsylvania, having, by purchase, recently become the sole owner of
WOODRUFF'S, KNIGHT'S, MYERS'
AND OTHER PATENTS FOR
SEATS AND COUCHES IN SLEEPING CARS,
would respectfully give notice to all RAILROAD COMPANIES IN THE UNITED STATES, that may desire Sleeping Cars on their Roads, that this Company are now prepared to negotiate for placing, wholly at its own expense, on such Railroads as may require them, their
SLEEPING CARS,
and operate them upon terms at once liberal and satisfactory to RAILROAD COMPANIES.
The Cars of this Company are constructed of great strength, and contain their late improved and patented plans of Seats and Couches, with STATE ROOMS AND BERTHS, finished in a style the most elaborate and tasteful, and are furnished with all of the modern conveniences and means of comfort usually found in the SLEEPING APARTMENTS OF OUR FIRST-CLASS HOTELS. The interior is lighted with gas; they are well ventilated, and at seasons of the year requiring it are warmed with pure heated air, regulated in degree at pleasure by registers in each State Room and section.
Where known, these Cars are not only regarded as indispensable on all through NIGHT TRAINS, but have become desirable, above all others, as DAY CARS.
Communications from the officers of Railway Companies desiring Sleeping Cars on their Roads, addressed to the Central Transportation Company at their office, **No. 1347 Brown st., PHILADELPHIA**, will receive immediate attention.
Railway Companies using, or permitting to be used on their respective lines, Sleeping Cars or Couches, that infringe upon the patents owned by this Company, are respectfully notified that satisfactory arrangements for such infringement will be expected. Address as above,
O. W. CHILDS, President.

The COSMOPOLITE
PARLOR RADIATOR, &
GAS BURNER,



Introduced one year ago, already ranks as the **LEADING STOVE** for PARLORS, SITTING ROOMS, and all places where a soft, pleasant heat is desired.
Fire may be kept all winter with an astonishingly small supply of coal.
Send for description and testimonials.
SANFORD, TRUSLOW & CO.,
Nos. 239 and 241 Water st., N. Y.

Challenge Air-tight KITCHEN RANGES,
May be placed in a fire-place without masonry, and with or without water-back; or may be set out on feet, as an ordinary stove.
This range, already very popular, has the **LARGEST OVEN** of any in the market; BAKES PERFECTLY, never [illegible] g to brown at the bottom; BOILS, ROASTS and and BR[illegible]S with unequalled facility and dispatch, and with extraordinary **ECONOMY OF FUEL**, which may be either coal or wood. Flues large and easily cleaned. A child can manage it, so simple is its construction. Castings extra heavy, and design plain and chaste.
Four sizes, adapted to families and hotels.

Beacon Light
SUMMER AND WINTER
PORTABLE RANGE,

Is a very popular range, having six boiler holes, one large oven that bakes perfectly, with an arrangement for roasting, or heating irons at the end. It is very economical of fuel. For a FEW DOLLARS a family may be supplied with PERFECT COOKING APPARATUS, equal to the highest price stove in the market.
Three sizes, adapted to coal, or wood.
SANFORD, TRUSLOW & CO.,
239 and 241 Water st., N. Y.

KRUPP'S PATENT CAST STEEL

RAILWAY TIRES

MANUFACTURED BY

FRIED. KRUPP,

ESSEN, RHENISH PRUSSIA.

These Celebrated Tires are made WITHOUT A WELD. Over 70,000 of them HAVE BEEN SUPPLIED.

By their extreme durability they are more economical than any others, being cheaper at their cost than Iron ones gratis.

THESE TIRES have been furnished to the following American Railways: Erie; Hudson River; Camden and Amboy; Housatonic; Naugatuck; New Haven; Chicago, Burlington and Quincy; Quincy and Toledo; Ohio and Mississippi; Beaver Meadow; Central Georgia; Don Pedro 2nd (Brazil); Grand Trunk, Great Western (Canada); European and North American (N. B); Cleveland and Mahoning; Cleveland, Painesville and Ashtabula.

STEAMBOAT SHAFTS. KRUPP'S CAST STEEL RAILWAY AXLES. ANCHOR FLUKES.

CITY RAILWAY COMBINATION WHEELS AND AXLES.

PROPELLER BLADES, ETC., ETC., ETC.

They wear equally and are free from lamination.

They are not liable to fracture and are unaffected by extreme cold.

LAP-WELDED IRON BOILER TUBES.

TUBE EXPANDERS. TUBE BRUSHES. THREE-CUTTER DRILLS.

Glass-Enamelled Iron Water Pipe, Steel Tubes, etc., etc.

They have received the highest approval from all RAILWAY COMPANIES that have them in service.

GLOBE

HEATERS.

The best stoves for RAILROAD DEPOTS and SHOPS, and all places where a great heat is required. They are very durable, and very economical of coal.

Beware of imitations that are inferior in strength and in other respects.

TESTIMONIALS.

HUDSON RIVER RAILROAD OFFICE, N. Y.

This Company have now in use, over two hundred of Sanford's Mammoth Heaters, in Station Houses, Work Shops, and Engine Houses; we commenced using them in 1853, and some of the first stoves put up are still good and in use. We consider them the best Heaters now in use.

J. M. HEBARD, Supply Agent.

UNION FERRY COMPANY.

The Mammoth Heaters have been used by this Company in their waiting rooms at the several ferries and found to be very excellent stoves and more durable and valuable than any here tofore used. CYRUS P. SMITH, Managing Director.

MANUFACTURED AND SOLD BY

SANFORD, TRUSLOW & CO.,

Nos. 239 and 241 Water street, New York.

A Good Chance for Investment.

WANTED a Partner with a capital of about $40,000, to join in Machinery and Iron Ship Building business, in a most favorable location on tide-water and railroads. Address Business Partner, care of A. F. KINDBERG, 25 Rector st., New York. 1t

NOTICE TO

BUILDERS OF RAILROAD CARS.

THE CENTRAL TRANSPORTATION COMPANY will receive proposals from Car Builders until the 20th day of October next, at their office

No. 1347 BROWN ST., PHILADELPHIA,

for constructing FIVE SLEEPING CARS—said cars (excepting the Quilts, Comforts, Sheets, Pillow-Cases and Towels to be furnished by the Company) are to be fully equipped and in all respects completed and delivered ready for use by the 20th day of February, 1864.

For a full knowledge of the plan and dimensions of said Cars in all their parts, and of the kind and quality of the materials to be used, the character of workmanship and the style of finish required, reference may be had to Cars Q, R, S, and T, now running on the PENNSYLVANIA CENTRAL RAILWAY; to Cars M and N, on the BELLEFONTAINE LINE; to Cars O and P, on the NORTHERN CENTRAL, and to Car T, on the NEW JERSEY CENTRAL RAILROADS.

Persons whose propositions may be accepted, will be required immediately to enter into contract to construct the aforesaid Five Cars similar to, and in all respects as perfect as the Cars above referred to, either of which may be made the basis of a proposition, in which should be stated the price per car.

Good and sufficient security will be required for the faithful performance of the work, and the contract will provide for monthly payments to the contractor, as the work progresses.

Proposals will also be received at the same time and place for the construction in like manner, and of the same description as the five above named,

Twenty Additional Sleeping Cars,

to be completed within the year 1864. The proposals should also state the price per Car, for all or such portion of the whole number as the proposer can complete and deliver within the first four months; also the price per Car for all, or such portion of the whole number, as the proposer can complete and deliver within the first eight months, next succeeding the 15th day of February, 1864.

The Company reserve the right to reject all propositions which they may deem unfavorable. All propositions addressed as above, to the CENTRAL TRANSPORTATION COMPANY, must be sealed and endorsed "*PROPOSAL for BUILDING SLEEPING CARS.*"

2t41 O. W. CHILDS, *President.*

KING'S NOTES ON STEAM. LESSONS AND Practical Notes on Steam. The Steam Engine, Propellers, etc., etc., for young Marine Engineers, Students, and others. By the late W. R King, U. S. N. Revised by Chief Engineer J. W. King, U. S. Navy. Fourth Edition, enlarged and improved.

"This is the second edition of a valuable work of the late W. R. King, U. S. N. It contains lessons and practical notes on Steam and the Steam Engine, Propellers, etc. It is calculated to be of great use to young marine engineers, students, and others. The text is illustrated and explained by numerous diagrams and representations of machinery. This new edition has been revised and enlarged by Chief Engineer J. W. King, U. S. N., brother to the deceased author of the work."—[Boston Daily Advertiser.

"This is one of the best, because eminently plain and practical treatises on the Steam Engine ever published."—[Philadelphia Press.

"Its republication at this time, when so many young men are entering the service as naval engineers, is most opportune. Each of them ought to have a copy."—[Philad. Ev. Bulletin.

In one volume octavo, with illustrations, price $2. Copies sent free by mail on receipt of price. Published by D. VAN NOSTRAND, 192 Broadway, New York.

NOTICE TO CONTRACTORS.

ALBANY AND SUSQUEHANNA R. R.

SEALED PROPOSALS WILL BE RECEIVED by the undersigned at the Engineer's Office, in the village of Unadilla, Otsego county, until Thursday, the 29th day of October instant, at 10 o'clock A. M. of that day, for Grading, Masonry, Bridging and Fencing of about 45 miles of the line of said railroad, extending from the village of Oneonta, in Otsego county to and including the Tunnel of about 2,000 feet through Webster Summit, in the Town of Colesville, in Broome county.

The line will be divided into Sections of convenient length, and proposals will be received for single Sections, or for the whole line.

The line will be ready for examination on and after Monday, the 19th inst., and Maps, Profiles and Plans, with Specifications may be examined at the Engineer's Office, in Unadilla, on and after that date.

Blank proposals, with all necessary information, will be furnished to those wishing to propose for work, at the Office of the Company, 73 State Street, Albany, and at the Engineer's Office, in Unadilla.

Proposals should be enclosed in an envelope and endorsed "Proposals," and directed to the undersigned at Unadilla.

The proposals which may be received in pursuance of this notice will be opened by the undersigned and canvassed, and the results reported to the Directors to aid them in making a proper award of the work.

Parties proposing, who are unknown to the undersigned, will be required to give satisfactory references.

The right is reserved to reject any or all proposals, as may be deemed for the interests of the Company.

Albany, October 1st, 1863.

C. W. WENTZ, Chief Engineer

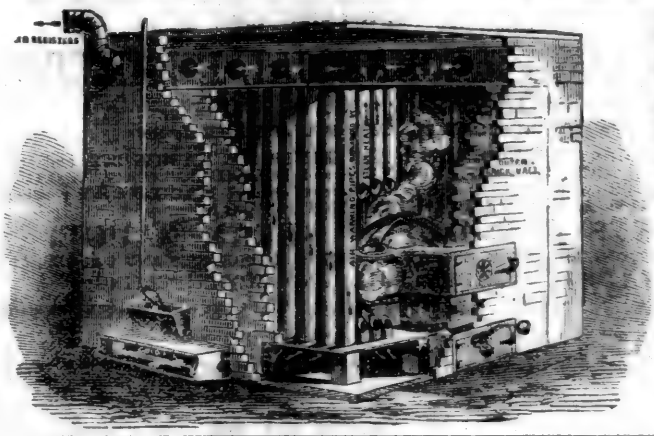
WILLIAMS & PAGE'S

PASSENGER CAR LAMPS

FOR KEROSENE OR COAL OILS.

THESE Lamps, now in use on a large number of Railroads are very neat and ornamental, and being enclosed in a Brass Case which is firmly secured to the side of the car, **entirely avoid the dripping of oil on Passengers and Car Cushions.**



The Light is very strong and brilliant, requiring no reflectors, and **lighting up** the Cars so as to give them that bright and cheerful appearance so much desired by roads for the pleasure and comfort of their Passengers. These Lamps are strong and durable, and are as easily taken care of as any in use. A full sized drawing sent when requested.

For Cars with "raised" or "high" roofs we make these Lamps with brass arms to suspend in any required manner.

Manufactured and for sale by

WILLIAMS & PAGE,
67 Water st.,
Boston, Mass.

SIMONDS' PATENT STEAM HEATER.

FOR Warming and Ventilating Buildings of all descriptions, Greenhouses, etc.

THIS HEATER, HAVING BEEN THOROUGHLY TESTED, has proved to be the MOST PERFECT WARMING APPARATUS IN USE. Parties having them in use, and to whom references can be given, give them the highest recommendations.

Those requiring a SAFE AND PERFECTLY EFFICIENT APPARATUS FOR WARMING PURPOSES, are invited to call and examine before purchasing elsewhere.

Personal attention given to erecting the same, and a guarantee given for their successful operation.

MUNN & CO'S
PATENT OFFICE.
ESTABLISHED 1842.

DURING the past twenty years, Messrs. MUNN & CO., in connection with the publication of the WEEKLY ILLUSTRATED SCIENTIFIC AMERICAN, (the only paper devoted to the Mechanic Arts in the country,) have acted as Attorneys for procuring letters patent in the United States and all foreign countries.

They would state that they have acted, during this period, as agents for more than

TWENTY THOUSAND INVENTORS;

In fact, they have become identified with the whole brotherhood of inventors and patentees, at home and abroad. Thousands of inventors for whom they have taken patents have addressed to them most flattering testimonials; and the wealth that has inured to the inventors whose patents were secured through their office, and afterward illustrated in the SCIENTIFIC AMERICAN, would amount to many millions of dollars!

Messrs. MUNN & Co. are prepared to attend to patent business of all kinds, in the quickest time and on the most liberal terms.

For further information, send for a pamphlet which contains the Patent Laws of the United States, and much other valuable information of importance to inventors and all others who own patent property. Also pamphlets of information furnished regarding the Patent Laws of all foreign countries.

For further particulars address

MUNN & CO.,
No. 37 Park Row, New York,
Or corner F and 7th sts., opposite Patent Office, Washington, D. C. 3m35

The Mercantile Mutual
INSURANCE
COMPANY,

C. J. DESPARD, Secretary.

ALEXANDER'S
ROOFING
CEMENT-PAINT
FOR
Railway & Steamboat Co's,
BUILDERS and BUILDINGS generally.

THIS PAINT is warranted not to **Crack** or **Scale** either on **Wood, Iron, Tin,** or **Canvass.**

The ingredients in its composition are **all** of a preserving and protective nature. This Paint is now extensively used by Railway Companies and pronounced much **cheaper,** more **durable** and **satisfactory** than what was previously used. It is 2 5ths heavier in body than any other Paint.

Give this Paint a trial, and if not found as represented no charge will be made for it.

Send for descriptive circular and references.

W. G. PERKINS, Gen'l Ag't,
271 Broadway,
NEW YORK.

SUBSTITUTE FOR
CAR DUCK.
Kingman's Car Covering.

THIS is a heavy Canvass imbedded in a coat of Elastic Mastic or Paste which is applied directly to the boarding of the top of the car, and then thoroughly painted with three or four coats of paint, thus making a covering VERY MUCH LIKE **CAR DUCK,** but at this time at half the cost. It is now successfully used by many Railroads and Car Builders. Directions and particulars sent when requested. This Mastic and Canvass for sale by

WILLIAMS & PAGE,
67 Water street,
Boston.
March 1863.

HAMILTON E. TOWLE,
CIVIL AND MECHANICAL ENGINEER
OFFICE, { 156 BROADWAY, NEAR MAIDEN LANE, NEW YORK.

SMITH'S
Railroad Air Light Comp'y.

THIS COMPANY OWNS THE EXCLUSIVE RIGHT of **SMITH'S AIR LIGHT FOR RAILROADS,** and is prepared to sell to Roads the right to use the same. We have arrangements perfected for furnishing Lamps and Burners at about the same price charged for the Oil and Kerosene Lamps by other Manufacturers.

That Railroad Managers may know the value of this LIGHT, we annex letters from the Hon. CHAUNCEY VIBBARD, the General Superintendent of the New York Central Railroad, and also from the Master Mechanics of the same road, showing its comparative cost with that of Oil Lights:

NEW YORK CENTRAL RAILROAD,
GENERAL SUPERINTENDENT'S OFFICE,
ALBANY, November 15, 1862.

TO THE MANAGERS OF RAILROADS:

Gentlemen,—This Company has adopted and is furnishing all their locomotives with the "SMITH AIR HEAD LIGHT."

They do this both on account of economy and the very superior light it affords.

We regard it as vastly superior to any light that has ever been produced, and commend it to the consideration of railroad managers.

Very respectfully, etc.,
C. VIBBARD, Gen'l Sup't.

NEW YORK CENTRAL RAILROAD,
MASTER MECHANIC'S OFFICE,
WEST ALBANY, January 28, 1863.

DR. GEORGE HAND SMITH:

Dear Sir,—Below please find the cost of locomotive lamps burning oil on this division.

Supposing oil cost $1 57 per gallon.
Cost per hour, 5 cents.
Cost of wicks, chimneys, per year, $4 80.
Estimate cost of leakage, gumming and overflow, one-fourth of the consumption.
In the year 1861, when the lamps were all oil burners, the cost of repairs were $10 20 per year.
You will please add the overflow to the actual cost per hour, which would make 6.25 per hour.

Your most ob't servant,
EDWARD H. JONES,
Master Mechanic, Eastern Division.

300 days, 5 hours each day, 1,500 hours, 6¼c. per hour	$93 75
Repairs of lamps for one year	10 20
Wicks and chimneys	4 80
	$108 75

NEW YORK CENTRAL RAILROAD,
MASTER MECHANIC'S OFFICE,
ROCHESTER, Feb. 2, 1863.

DR. GEORGE HAND SMITH:

Dear Sir,—In answer to your inquiries in reference to your Air Light, I would state that we have upon this division of the road 28 of your lights on our first class passenger and freight engines. I find the light consumes about five feet of common gas per hour, which, at the price of gas at this place, $2½ per thousand, makes the cost of light for each engine 1¼ cents per hour.

Renewing my often expressed opinion that your light, for its reliability, its economy and superiority, far exceeds any light heretofore used on engines,

I remain, very truly, yours, etc.,
DAVID UPTON,
Master Mechanic, Western Division.

300 days, 5 hours each day, 1,500 hours, 1¼c. per hour	$18 75
One-sixth waste of gas	3 12
Repairs of lamps for one year	5 00
	$26 87

Further information may be obtained at the office of the Company, **21 Nassau st.,** or by addressing

CHAS. W. WELSH,
Secretary.

American Railroad Journal.

New York, Saturday, October 17, 1863.

The Caledonian and Crinan Ship Canals in Scotland.

The subject of ship canals having recently become one of much discussion in this State, no less than three being talked of at the present moment, one by the route and enlargement of the Erie Canal between Buffalo and the Hudson, another around Niagara Falls on the American side, and the other between the St. Lawrence and the Hudson by the way of the Chamblee or Caughnawaga Canals, Lake Champlain and Champlain Canal, it is a proper occasion to illustrate it by reference to similar works in other countries.

The most useful example perhaps is to be found in the Great Caledonian Canal designed to avoid the circuitous navigation around the north of Scotland and connect the German and Atlantic Oceans. By deepening the beds of the rivers Lochy and Oich, dredging a part of Loch Ness, and using a chain of lakes, an inland navigation was secured with sufficient depth to pass a 32 gun frigate. To be more minute, we may say, that beginning at the Beauly Firth near Inverness, this canal is cut "through seven miles of solid rock to Loch Ness, which is 24 miles long; then through ordinary earth for six miles to Loch Oich, which is 3¼ miles long; then 2 miles to Loch Lochy which is 10 miles long; then 8 miles further to Loch Eil, which opens out to the western sea. These connecting canals are 120 feet wide at the surface, 50 feet at bottom, and 17 feet deep. The locks themselves are 28 in number, all being 170 feet long, 40 feet wide, with each a lift of 8 feet. Eight of them are quite close together, and are known by the name of Neptune's Staircase. Many powerful streams are passed under the bed of the canal by well constructed culverts. The summit level is 94 feet above tide water at the Eastern Coast, and 96½ above that on the western, showing the interesting fact that the ocean at the eastern terminus is 2½ feet higher than at the western. At Fort Augustus where it leaves Loch Ness, the canal is cut through the glacis of the fort thus adding to its defences. Between Loch Ness and Loch Oich, the land is 20 feet above the water line. The locks are founded on inverted arches, and the gates are of cast iron. The cost of this work was £36,500 per mile, and for the whole, calling it 25 miles, £912,500. The engineer was the famous Thomas Telfourd. It has been in operation about sixty years, and in that time the British Government has spent upon it £1,300,000, besides the further sum of £100,000 received from tolls. It has never repaid the cost, nor the interest upon the cost, nor even the annual working expenses. "Shippers and captains of vessels," says a recent authority, "have made but little use of it." But four vessels per day for the last few years have passed through it. Steam tugs have been introduced upon it to shorten the time of passage, but even this improvement has resulted in no pecuniary benefit whatever.

Every year the Commissioners in charge of the work, apply to the Government for appropriations of money to keep it in repair, and only once in the year 1862–3 did the receipts for tolls equal the working expenses. It has puzzled the Chancellor of the Exchequer more than any other subject which comes under his notice, and at last, it has become a question whether the Canal should not be abandoned, or given away to any parties who will take it.

There is another Canal of a similar character which deserves a passing notice, which has also been without the anticipated results. This is known as the Crinan Canal. It is only nine miles in length, beginning at Lock Gilp, and ending at Lock Crinan, shortening a great distance in sailing or steaming between Glasgow to Oban and Fort William, as it cuts through the isthmus which connects the long peninsula of Cantire with the main land. It is constructed on a much smaller scale than the Caledonian Canal, being only 24 feet wide, and twelve feet deep with fifteen locks. This too is an unprofitable work. The craft which traverse it are small in size, and though in 1862–'3, 2,200 passages were made through it by steamers and sailing vessels, its expenses were £3,277, and its receipts only £3,780, the difference not being enough to pay any dividend of consequence on its capital stock (for it is owned by a company) which is about half a million of dollars. It was constructed in 1805 and has been a losing property ever since.

We may thus perceive what some ship canals amount to, even under apparently favorable circumstances. We admit that in many respects those talked off in connection with our great lakes are entirely different, for they are to be the outlets of immense inland seas and rivers, and of the most fertile and productive states.

Yet we may learn a lesson of caution from the fate of the Caledonian Canal, that magnificent projects are not always the most useful. If we are to have ship canals they should be short,—links between navigable lakes and rivers, and on natural routes, such as are obvious and indispensable. If we want the trade of all the lakes, if we desire to have the business of both the Canadas, the Canal proposed between the St. Lawrence and the Hudson by the way of Lake Champlain is the most feasible method of obtaining them, and the most economical. Three or four millions will effect the object, and if the Ottawa Canal is made, we shall then by the route proposed shorten the distance by water with a comparatively free navigation, between Chicago and the Hudson several hundred miles. To expect to see large steamers of from 500 to 1000 tons coming down a canal of 350 miles in extent, passing hundreds of locks and thousands of bridges is to expect something very preposterous, and unreasonable, leaving out of view the enormous cost, the delays, the difficulties and the disadvantages of such a job.

New York, Providence and Boston Railroad.

Annexed is a statement of the business of the road for the year ending August 31, 1863:

The receipts of the year are		$409,485 96
Amount due for transportat'n of troops		4,600 00
Amount due by Postoffice Department		1,223 03
Total		$415,308 99
Expenses 46½ per cent.	$192,265 43	
New cars	6,309 85	
	$198,575 28	
Taxes	17,579 00	216,154 28
Net earnings		$199,154 71

Compared with the previous year, the receipts show an increase of $103,938 51, with an increase in expenses of $45,490 86—making the increase of net earnings $58,447 65.

The number of passengers carried over the road for the past two years is as follows:

	1862.	1863.
Through passengers.....No.	128,442	161,095
Local passengers	93,965	115,770

The amount of freight transported over the road for the past two years is as follows:

	1862.	1863.
Through freight, tons	44,937½	54,520½
Local freight	10,156	12,866

The indebtedness of the company on the 31st of August, 1863, was:

Six per cent. bonds due 1873	$100,000
Six per cent. bonds due 1878	150,000
Total	$250,000
Less amount held by company	18,000
Total	$232,000
Amount of old bonds not presented	15,000
Total	$247,000

The receipts from all sources during the year ending August 31, were $477,029, and the expenditures, $381,071, leaving a balance of cash on hand of $85,957. The report says:

The road has been kept in its usual good condition and repair. 16,990 new ties have been laid, 327 tons of rails re-rolled and laid down, 7690 rails taken up and repaired in our shop. The bridges are all in good condition and repair. The locomotives are all in good running order. One passenger and fifteen freight cars have been built, and one new passenger and five freight cars added to our rolling stock. Some further additions to our rolling stock will be required this year to meet the increasing business of the road. An addition has been made to the engine house in Providence.

The number of miles run for the year was 297,700 all with coal, at a cost of 11 74-100 per mile, being an increased cost per mile over that of last year, arising from the increased weight of our trains and advance in the cost of coal.

The Newport connection by steamboat with our Shore Line Express at Greenwich, was resumed this year under disadvantageous circumstances, owing to the difficulty in securing a suitable boat for the business. Arrangements will be made in due time for the next season to secure a boat better suited to the wants of this connection, and thus secure a permanent and reliable route for the future.

A new ferry boat for the Connecticut river, which will take six cars, is nearly completed, and the boat on the Thames at New London is to be enlarged, which, when completed, will add materially to the convenience and comfort of our Shore Line Express, thus making it the most agreeable and reliable land line between New York and Boston.

The balance of the bonded debt of the company outstanding, which matured on the 1st of August, has been settled by an issue of $150,000 ten year and $100,000 fifteen year six per cent. bonds, in accordance with your instructions. Of these, $132,000 ten year are exchanged at par under an arrangement made last year, and $100,000 fifteen year sold at a premium of $5350, leaving in the hands of the company $18,000 ten year bonds which we do not consider it necessary to use. There are yet outstanding $15,200 of the old bonds, bearing no interest, which will be redeemed as presented, thus leaving the funded debt of the company but $282,000.

The company own a large and valuable tract of real estate at Providence, from which they will no doubt realize before the maturity of these bonds sufficient to meet a large portion of them.

The company has no floating debt or construction account open.

The following gentlemen were elected directors for the ensuing year: James I. Day, Stonington; Thomas Tileston, Samuel D. Babcock, Hamilton Blydenburg, W. F. Cary, Henry Morgan, Samuel Sloan, New York city; Nathan F. Dixon, Westerly; Charles A. Lewis New London.

Marietta and Cincinnati Railroad Company.

To the Stockholders of the Marietta and Cincinnati Railroad Company—(as Re-organized:)

In conformity with the requirements of the charter, the Board of Directors respectfully submit this, their Third Annual Report, since the re-organization of the company.

Attention is invited to the following statements:

1st. The general account, or balance sheet, showing the position of the company on the 30th of June.

2d. A statement of the total "Revenue from Traffic," and the "Transportation Expenses" for the year ending on the 30th of June.

3d. The "Profit and Loss" account.

1.—Balance Sheet, June 30th, 1863.

Original Cost—			
Railway and equipments			$8,009,422 19
Increase—			
First preference stock dividends	$810,103 50		
Second prefer'ce stock dividends	613,906 50		
		1,424,010 00	
Union Railway purchase (on acc'nt of,) in cash	$84,060 46		
Do. do. in bonds	50,971 91		
		135,032 37	
Hillsboro' & Cincinnati Railway p'rchase (on account of,) in cash.	$3,202 50		
Do. do. in shares	$1,150,654 61		
		1,153,857 11	
Materials on hand		6,664 26	
Balances outstanding		57,939 19	
Banks and bankers		60,310 33	
Discount on 1st mortgage bonds		22,560 00	
Real estate		18,383 55	
Construction		276,641 00	
			$11,164,820 00
Capital Stock—			
First prefer'nce shares and scrip for fractions of shares	$5,105,384 49		
Second pref., shares and scrip for fractions of shares	3,424,169 23		
Common stock	1,850,000 00		
		$10,379,553 72	
Liabilities—			
First mortgage bonds issued		285,668 80	
City of Baltimore loan to Union R. R.		20,000 00	
Bills payable	6,053 13		
Pay roll	19,663 80		
Individual accou ts.	27,378 11		
Sterling bonds acc't.	87,817 88		
		140,912 92	
Profit and Loss—			
Resulting from earnings		338,684 56	
			$11,164,820 00

2.—Revenue Account.

From July 1, 1862, to June 30, 1863.

Receipts—		
Passengers		$224,995 87
Freight		353,546 54
Mail		20,937 38
Express		10,265 00
Telegraph		10,280 00
		$620,024 79
Expenditures—		
Transportation expenses		$320,394 89
Balance carried to profit and loss		299,629 90
		$620,024 79

3.—Profit and Loss Account.

Interest on Trustees' loan	$3,749 16
Rent of Little Miami R. R. track, 12 months	60,000 00
Coupons due August 1st, 1862	308 00
" Feb'ry 1st, 1863	9,502 60
Interest 1st mortgage bonds, scrip	162 35
Trustees' account, balance	30 38
Taxes, amount paid during year ending this date	12,013 60
Interest, balance of interest account during year ending this date	1,098 10
Balance	338,684 56
	$425,548 75
Balance June 30, 1862	$125,918 85
Net earnings, from July 1st, 1862, to June 30th, 1863	299,629 90
	$425,548 75

The Revenue.—From traffic for the year ending 30th June, amounted to.....$620,024 79

Deduct working expenses..... 320,394 89

Leaving the net earnings $299,629 90

which sum is carried to the credit of profit and loss, as will be seen by reference to that account.

Construction Account.—The expenditures on this account are as follows:

	From August 15, 1860, to June 30, 1862.	From July 1, 1862, to June 30, 1863.	Total, as charged Construction Acct.
Locomotives	$22,562 71	$7,517 06	$30,019 77
Construction cars	---- ----	5,383 55	5,383 55
Passenger cars	7,791 47	6,528 48	14,320 95
Freight cars	17,892 51	11,289 78	29,182 29
New engine house, Cincinnati	684 09	---- ----	684 09
Office Furniture	1,434 13	---- ----	1,434 13
Ties	8,091 03	---- ----	8,091 03
Harmar depot grounds	598 09	---- ----	598 09
New bridges	29,046 24	33,663 26	62,709 50
New barges	1,238 00	347 51	1,585 51
Eng'neering	10,273 54	2,873 60	13,147 14
Station buildings	2,518 65	855 29	3,373 94
Cin, depot grounds	13,333 05	---- ----	13,333 05
Tunneling	33,046 09	20,945 83	53,991 92
New shops, Chillic'the	1,484 23	816 69	2,300 92
" Zaleski	4,717 67	23 17	4,740 84
Zaleski shops machinery—new	2,520 67	---- ----	2,520 67
New shop tools, Chillicothe	450 81	---- ----	450 81
Iron rail, main line	---- ----	12,232 08	12,232 08
Masonry	---- ----	6,045 01	6,045 01
Excavation	---- ----	5,039 60	5,039 60
Embankment	---- ----	4,713 36	4,713 36
Superstructure	---- ----	742 75	742 75
	$157,623 98	$119,017 02	$276,641 00

Trustees' Loan.—This loan has been paid in full since the last annual meeting, and no longer has a place in the general balance sheet.

First Mortgage Bonds.—For the purpose of completing the railway, a mortgage was executed on the property to secure an issue of $3,500,000 of bonds, $285,668 80 of which have been disposed of, as shown by the statement.

A sufficient additional amount has been sold in Europe by the President to secure the completion of the unfinished portions of the line now in operation. These are sterling bonds, with interest and principal, payable at the London Joint Stock Bank.

From the balance of this issue the company will be able to command the means for the extension of the line into the city of Cincinnati, and to

construct such links as may be necessary to connect with other lines of railway as may hereafter be found expedient; the most important of which will be a branch to Dayton and an extension of the line to Wheeling.

These bonds are a first class security, having a first and only lien upon 203 miles of railway now in operation, and which earned the interest upon $5,000,000 during the past year, notwithstanding *two tremendous obstacles:* 1st. Our connection with the Baltimore and Ohio Railway was interrupted *two-thirds* of the year, thus depriving the line of any outlet to the seaboard markets. 2d. The incomplete and unsatisfactory condition of the railway greatly marring public confidence and deterring traffic.

These bonds are also a first lien upon the proposed extension to Cincinnati and all other works which may be made or completed from the proceeds. Their security would be a property costing not less than $15,000,000, and which will earn the interest on this cost so soon as the money is expended, and the contemplated improvements and extensions are perfected.

The following resolution was adopted by the Board of Directors, at the meeting on the 11th of March, 1863:

Resolved, That, as a guarantee for the punctual payment of the interest upon the funded debt of this company, the first net earnings in each half of the fiscal year, to the extent necessary for the purpose, shall be set off and immediately deposited, as follows, viz: So much as may be necessary to pay the coupons upon the sterling bonds, in the London Joint Stock Bank, and such sum as may be necessary to pay the coupons of the dollar bonds, shall be deposited in New York, which deposits shall be held subject to this purpose only; and that public notice of the deposit shall be duly made by publication in the cities of London and New York, in such manner as the President may direct.

Agreeably to the foregoing resolution, funds will be immediately placed with the "London Joint Stock Bank," for the payment of the interest on the *sterling bonds*, and with Messrs. Winslow, Lanier & Co., New York, for the interest on the *dollar bonds*, both payable 1st February, 1864, the net earnings for the first month of the half year (July) being *more than sufficient* for the purpose.

Floating Debt.—It will be observed, by reference to the balance sheet, that the company is entirely free from floating debt.

Completion of the Line.—Contracts have been entered into with responsible parties for the execution of the work required towards placing the line in the condition of a first class railway.

This work has been taken at an advance of fifteen per cent. over estimates of the engineer made previous to the existing troubles in the country.

In view of the immense draft upon the laboring population to carry on the war, and the great increase in price of all supplies and materials required for such work, the board regard the terms of the contract as quite favorable.

The contractors have now a large and adequate force at work in Pilcher Tunnel, on the masonry at different points where required, on the bridges, and have three steam excavators with sufficient motive power and cars at work moving material into embankments where the track has hitherto rested upon trestle work.

Ohio River Bridge and Baltimore and Ohio Railroad Connection.—This company and the North Western Virginia Company, or either of them, are authorized by Act of Congress to build a railroad bridge across the Ohio River, so as to form a perfect connection between the two roads.

The control and operation of the North Western Virginia Railroad being virtually in the hands of the Baltimore and Ohio Company, the preliminary arrangements for the construction of the bridge have necessarily led to a more thorough understanding of our relations with that road. The results promise to be of the most satisfactory character.

The North Western Virginia Railroad Company will soon become re-organized by an exchange of indebtedness for stock, and the ownership of the line falls mainly into the hands of the Baltimore and Ohio Railroad Company. This will secure the completion of the tunnels on the North Western Railway, and in connection with the Ohio river bridge, thus extend the active ownership of the Baltimore and Ohio Company to the west bank of the Ohio River.

These important steps for the perfection of the direct through route to the seaboard afford a most gratifying evidence of a cordial disposition on the part of the Baltimore and Ohio Railway managers and the authorities of the city of Baltimore to co-operate fully in developing the capacity of the route.

These arrangements have all been delayed by the recent raid of the rebels across the Baltimore and Ohio road; but their consummation, at an early day, may be relied upon.

Cincinnati Extension.—Considerable progress has been made in securing the right of way over the intermediate lands between Loveland and Mill Creek Valley, with a view to construct, upon that route, an independent entrance into the city of Cincinnati.

While the prosecution of this work must be made dependent upon obtaining further rights of way on favorable terms, and upon the facilities to be obtained in the city for connections and harmonious working with roads already occupying the ground in that part of the city, it is expected that nothing will prevent an early prosecution of this work.

In view of the certain prospect that this road—by the completion of the North Western Virginia road and the Ohio river bridge—is to be recognized by the Baltimore and Ohio Railroad Company as a part of its most direct route to the great centre of Western business, the importance of an independent and commanding position in that great centre, can hardly be over-estimated.

Hitherto our position in Cincinnati has been only that of a local road, supplying traffic to and from its route, dependent for an entrance upon a road who could, without injury to themselves, aid in the development of our local traffic; but whose antagonism must necessarily be excited by any successful effort on our part to control *through business* from Cincinnati to the seaboard.

The commercial interests of Cincinnati and Baltimore are vitally interested in drawing to their respective cities the immense tonnage and accompanying travel leading to and from the interior upon their parallels; and this Board are rejoiced to know that these interests are ready to co-operate cordially in perfecting a route upon which alone they can rely in the strong competition they must encounter from Northern rivals.

Union Railway Purchase.—Full payment has been made for the purchase of this railway, in accordance with the terms of the contract, and a title deed has been received of this road.

There remains yet to be made several small payments to complete the purchase of the locomotives and machinery, amounting, exclusive of interest, to $11,740.

Hillsboro' Railway Purchase.—In pursuance of the contract to purchase this railway, the following payments have been made:

Cash	$3,202 50
First class preference shares	979,280 77
Second " "	171,373 84
	$1,153,857 11

There yet remains to be made the following payments to complete the purchase:

Cash	$8,297 50
First class preference shares	282,870 98
Second " "	61,002 41
Common shares	320,000 00
	$672,170 89

When these payments are completed this company will receive a deed to this property *free of all incumbrance.* This will probably be accomplished within a few months, as the bonds are being rapidly returned to this company for conversion into shares.

Results.—While the results of the past year's business are presented with much gratification as demonstrating an improved condition in the affairs of the company, it should be borne in mind that the road is still unfinished, without proper connections at the termini; consequently has never been recognized by leading railroads, either east or west, as a part of their working systems; that the results thus far are only local in their character; that the whole enterprise, in a word, is new—untried by its rightful conditions of success; that its development is future, and dependent now only upon improvements and connections which it *has the means* to make absolutely certain.

We are still sowing and cultivating. The time for the ripened harvest is not yet.

But a point is now reached when it will be useful to examine into the reasons of disappointment and failure, and ascertain definitely the means of success.

All railroads must depend upon two general sources of revenue, viz., local and through traffic. To what extent may this line rely upon either or both of these resources?

In regard to the local resources of the route, we are not left to conjecture or mere estimate of results. The revenue account shows the receipts from traffic for the past year to have been $620,024 79. The amount of through freight is also given at 23,344 tons, producing a revenue of $103,121 83. The exact amount of through passenger traffic is not definitely stated; but owing to frequent interruptions of the route since the beginning of the rebellion, it is too small to vary materially the calculation.

We may, therefore, arrive at correct conclusions as to the value of both kinds of traffic. The result is gross earnings of $516,902 96 from local sources, and $103,121 83 from through.

From this statement it is manifest that the local resources of the route have alone received anything like a proper development, and presents the encouraging fact that net earnings from this source connected with the meagre through business—consisting almost entirely of fourth class freights—which we have been able to command, has furnished the means to pay legitimate expenses, and a sum equal to six per cent. on nearly $5,000,000 of capital.

This result from local sources cannot be regarded by any means as a full development of that branch of the business of the road.

The mineral resources of the district of country through which the road passes, consisting of coal, iron and salt, has met with no adequate development.

This has resulted partly from the depressed condition of those interests for several years, from the want of proper facilities in Cincinnati as well as from the want of sufficient equipment on the road to move promptly the heavy tonnage arising from that branch of traffic. The coal which abounds along the route has been tested in the different markets accessible by the road, and its character for fuel purposes fully established.

With adequate equipment on the road, and the facilities which will be afforded by the proposed entrance to the city of Cincinnati for delivering and distributing of coal, a very largely increased traffic in that article may be realized.

The next important question to solve is the capacity of the route for through traffic. Why have no better results been reached? Can they be realized in future?

The first reason for failure in securing a through business has arisen from the unfinished condition of the road; while local interests have been compelled to use the road to a certain extent, because they had no other outlet. Those who control through business have had a choice of routes, and naturally enough, avoided one which was esteemed inferior. In the strong rivalry and competition which sprang up on the completion of the various through routes, the imperfections of this line were *greatly exaggerated;* and no better evidence is needed of the commanding position of

the route than the *bitter, persistent and united efforts* of other railroad lines to *break it down* in its infancy. However unjust and unwarrantable these attacks may have been, there is no doubt about the result upon the public mind—and that was to deprive us almost entirely of the through business appropriately belonging to the route.

2d. In the month of March, 1860, the Union road was open to Belpre, and thus gave a rail connection with the North Western Virginia Railroad at Parkersburg, leaving only a ferry between the termini of the respective roads.

Previous to that period, the route was not an all rail route, and was not so regarded by shippers, in consequence of the nine miles of water communication between Scott's Landing and Parkersburg.

3d. The completion of the Union road removed that objection, and the route had begun to experience some benefit from through traffic—when in April, 1861, the Baltimore and Ohio road was first interrupted by the rebels. These interruptions have been so frequent since that time, that public confidence has never been fully established. Our through traffic during this interval, has been of that fitful and uncertain character that it has been rather an annoyance and interruption to local traffic than a source of profit.

4th. Another reason for failure in through business has arisen from the want of that cordial and thorough co-operation on the part of the Baltimore and Ohio Railway with this road, which can only result from a close identification of interests.

They have assigned as a reason (and it is entitled to consideration,) that the unfinished condition of our road would not permit them to identify their route with our line.

5th. The ferriage over the Ohio river, involving not only the evil consequences of break of gauge, but heavy expense and loss of time incident to the transfer of persons and property across so large a river.

6th. The lack of an independent, central, commanding position in the city of Cincinnati—one which would give us direct connections at that point with the Western system of railroads—has also been a valid reason for want of success in securing through traffic.

It is not necessary to discuss at length the effects of these various obstacles to success.

The statement alone is sufficient to convince practical men that the capacity of the route for through business has had no fair trial—that the necessary conditions of success have not been reached.

The important inquiry is, whether these obstacles can be removed ?

All calculations for the future of this road must be predicated upon the success of the Government in suppressing the rebellion which has so long inflicted its curses upon our country. Proximity to the scenes of the war has exposed the route of which this road forms a central link to heavy losses. But the dark days of rebel raids have surely passed, and the ultimate success of the Government in suppressing this wicked conspiracy against law, order, and all human rights, may be assumed with so much certainty that no intelligent business man would hesitate to predicate his plans for the future upon that result.

With the quiet and confidence thus restored, it is simply a question of the outlay of a moderate sum of money to accomplish all that is desired.

The removal of the imperfections in the road is already secured. The construction of the Ohio river bridge, and the re-organization of the North Western Virginia Company, not only removes material obstacles, but ensures a cordial co-operation of the Baltimore and Ohio Railway Company in building up a through traffic upon a route which gives them decided advantages over their rivals.

In addition to this valuable consideration, it will be found that a *continuous gauge*, from Cincinnati to Baltimore, Philadelphia, and Jersey City, which will be secured by the construction of the Ohio river bridge, will give this route a decided and permanent advantage over all competitors. With proper connections in the city of Cincinnati, this continuity of gauge can be extended westwardly through Indianapolis to St. Louis, and connect with the railway system of Indiana, Illinois, and States beyond the Mississippi river.

This scheme for transferring the heavy articles of Western produce seaward without breaking bulk, must, when properly matured, occupy a commanding position among the commercial avenues of the country.

From the principal producing centres in the southwest grain and its products can be placed upon tide water at such rates, and with such promptness and uniformity of delivery at all seasons of the year, as will prevent a diversion of this large traffic to more Northern routes.

A route offering the facilities of an unbroken gauge will also attract a large share of westward bound traffic.

The remaining obstacle to success to be considered is the position of the line in Cincinnati. This is to be overcome by the expenditure of less than $1,000,000.

That this amount of money can be secured by sale of the first mortgage bonds of the company cannot be doubted.

We have, then, to sum up the condition of the enterprise at this time.

1st. Results from local traffic sufficient to pay current expenses and a net balance of $300,000, for interest rents or dividends.

2d. The means to perfect the railway within a brief period.

3d. Full provision for securing a perfect connection eastward by continuity of gauge with the Baltimore and Ohio Railway, whose interests will be thus identified with the route.

4th. The right to build an independent entrance into Cincinnati, and the financial credit to raise the means for that purpose.

5th. The cordial good will of the great commercial interests of the cities of Cincinnati and Baltimore, who are driven by alliances and combinations all hostile to them to regard this route as their only safe reliance against powerful competition.

A safe estimate of ultimate results from both local and through sources can only be made by a careful comparison of this with other lines similarly located which have been tested, sufficient time having elapsed to develope their capacity for profitable business.

The Little Miami and Hamilton and Dayton lines afford good illustrations of the capacity of railroads situated similarly with our own for through business.

The earnings of the Little Miami for the year ending November 30th, 1862, were $1,566,396, or at the rate of $11,602 per mile! The Hamilton and Dayton earned for the year ending March 31st, 1863, $877,403 86, being at the rate of $14,616 per mile.

With a line perfected and connected as proposed, it may fairly be claimed that the main stem of this road will reach gross earnings to the amount of $10,000 per mile. This would yield $2,030,000, and give a net result of $1,015,000; thus paying interest on mortgage debt and dividends of more than six per cent. on its entire stock capital.

The company now own and have in successful operation two hundred and three miles of railway, with its ample equipment, at a cost of eleven million one hundred and sixty-four thousand eight hundred and twenty dollars, *entirely free from floating debt*, and almost entirely represented by a share capital; it forms part of the great chain of railway running from Baltimore and Washington City directly west through Parkersburg, Marietta, Cincinnati and St. Louis, to the western limits of population, and is now part of a direct line, in full operation, more than a thousand miles in length, and not varying in its entire distance more than a degree from the same parallel of latitude.

Respectfully submitted,
By order of the Board of Directors,
NOAH L. WILSON, *President.*

Chillicothe, Ohio, August 19, 1863.

Contract to Operate a Railroad.---Courts have no Power to Decree Specific Performance.

CONSOLIDATION OF RAILROADS; RIGHTS OF STOCKHOLDERS IN FORMER COMPANIES. LEASING RAILROADS—RIGHTS OF LESSORS.

The Cleveland and Toledo Railroad Company is the product of a consolidation of the Toledo, Norwalk and Cleveland Railroad Company and the Junction Railroad Company. The consolidation was effected on the 15th of July, 1853.

The object of the original companies was to construct a through line of railroad between the cities of Cleveland and Toledo, one of which was to pass through Norwalk, and the other through Sandusky. To insure this being done on the Northern route through Sandusky, the following article was inserted in the agreement of consolidation:

"The Cleveland and Toledo Railroad Company shall occupy and construct a line of railroad, extending from Sandusky across Sandusky Bay, by Port Clinton, Perrysburg and Maumee City to or near Swanton, assuming the railroad of the Port Clinton Railroad Company, and connecting with the railroad of the Northern Indiana Railroad Company, at some convenient point near Swanton. It shall open and maintain a railroad connection between Sandusky and Toledo, upon the same gauge with the road between Sandusky and Cleveland, to be finished simultaneously with the opening of the road to Perrysburg." It was also agreed that "the Cleveland and Toledo Railroad Company will establish and maintain workshops both at Norwalk and at Sandusky, sufficient for the ordinary repairs of machinery on the respective lines."

In carrying out the object of opening and maintaining a railroad connection between Sandusky and Toledo, the new Company having a constructed road from Cleveland to Sandusky, proceeded to obtain a lease from the Port Clinton Railroad Company, which was executed on the 28th of October, 1853. By this lease the Port Clinton Railroad Company, devised to the Cleveland and Toledo Railroad Co., for the term of ninety nine years, renewable forever, the use and enjoyment of its road and franchises. The consideration expressed in the form of covenants, was the payment of taxes, the assumption of debts, the finishing the road, and its operation and management in such a manner as would not forfeit or endanger the franchises and corporate rights of the lessor, and the allowing the stockholders of the Port Clinton Railroad Company, on the payment of their subscriptions, to receive such dividends as the holders of a like amount of stock in the Cleveland and Toledo Company would be entitled to receive.

The Cleveland and Toledo Company thereupon proceeded to finish the projected road of the Port Clinton Company, and did, for several years, run a through line from Cleveland to Toledo, by way Sandusky, as contemplated by the agreement of consolidation. Subsequently, in the year 1858, the directors of the Cleveland and Toledo Company ceased running a through line from Cleveland to Toledo by way of Sandusky, and after, for a short time, running a train from Sandusky to Port Clinton, discontinued the use of the road constructed under the lease from the Port Clinton Company. From that time to the present, no trains have been run on that road; the rolling stock and other

personal property connected with the use of the road have been removed; and no repairs of the road have been made.

The Port Clinton Railroad Company now filed a petition to obtain a specific performance of the covenant, on the part of the Cleveland and Toledo Railroad Company, as to the road finished under the lease, to "operate and manage the same in such manner as will not forfeit or endanger the franchises and corporate rights" of the Port Clinton Company. The Trustees of Portland township, which includes within its limits the city of Sandusky, at the same time sought similar relief, on the ground that they had been authorized, and had actually subscribed to the stock of the Junction Railroad Company to the amount of $150,000. That certain conditions upon which such subscription was made were that fifty thousand dollars of the amount subscribed should be expended at or east of Sandusky, and one hundred thousand west. That the route west was to cross Sandusky Bay. That a main inducement of the subscription was the benefit which would accrue to the city of Sandusky, by a direct line of Railroad communication, east and west, and the prosperity of the city had been injuriously affected by the discontinuance, on the part of the Cleveland and Toledo Company, of its Northern route, as a line of communication between Cleveland and Toledo. The origin of the Port Clinton Company, its condition at the time of the lease, and its position at the time of the institution of the action was shown by the testimony. From this it appears that the Junction Railroad Company sought to extend its road west from Sandusky, across Sandusky Bay, by way of Port Clinton to Toledo. In this attempt rights of way had been obtained and a considerable sum of money expended in constructing the road, when further progress was arrested by an injunction obtained on the ground of a want of power under its charter. Pending these proceedings, and under an apprehension of their unfavorable termination, a company was organized under the general law of the State, by persons interested in the Junction Company to carry out the project. The capital stock of the company thus organized, under the name of the Port Clinton Railroad Company, was $100,000, of which $11,000 were subscribed, and of this only five per cent. which was necessary to perfect the organization, has ever been paid. It does not appear that even this sum has ever been expended in the prosecution of the object of the organization: but, on the contrary, that all means expended, up to the time of the execution of the lease were furnished by the Junction Railroad Company. From the execution of the lease in 1853 to 1858 there was no meeting of the directors or stockholders of the company. Its first corporate action after the execution of the lease, had in view the bringing of the present suit.

The relief sought by the plaintiffs was an order from the Supreme Court of Ohio decreeing a specific performance of the contract and compelling the Cleveland and Toledo Railroad Company, to resume the operation of the route through Sandusky to Toledo. The Court now decide in favor of the defendant and hold:

That if in any case, it would be competent for a court to decree the specific performance of a contract to operate a railroad, requiring as it would personal acts, involving the continuous exercise of skill and judgment under varying circumstances and emergencies, it could only be in a case where the demand for the exercise of such power was stringent, and the circumstances such as to authorize the court in making an order to limit its duration as to time, and to define, to some proper and reasonable extent, the mode and manner in which it should be obeyed. That the Port Clinton Railroad Company is not entitled to a judgment requiring specific performance of the covenant in the lease.

The court also hold that where a township through which a railroad might be located is "authorized to subscribe to the stock of said railroad," and such subscription is made, *as in this case*, the contract of subscription may contain terms and conditions affecting its subject matter and the consideration to be paid and received; but the making a subscription and paying money for stock cannot be made a consideration to sustain a contract giving the township a claim to control the general conduct and discretion of the directors of the Company, in matters involving the pecuniary interest of the company and its stockholders, to an amount far exceeding the subscription of the township. It was not the intention of the Legislature to authorize the township to obtain by its contract such a claim, or the directors of the company for the time being so to limit the power and discretion of future boards of directors.

The court further hold that where two railroad companies in their agreement for consolidation insert an article to provide for th ecompetition and running of the route of one of the companies, and the directors of the consolidated company fail to comply with such provision, and the duty thus created is owing to all the stockholders, one of the stockholders cannot sustain an action against the directors to enforce a compliance therewith; and if the duty is owing to a class of stockholders, having in respect to the matter an interest or right distinct from another class, any proceeding to obtain relief, for a refusal or neglect on the part of the directors to discharge the duty, must bring before the court not only the directors of the company, but the two classes of stockholders.

Judgment for the Defendant.

Atlantic and Great Western, and Cincinnati, Hamilton and Dayton Railroads.

A meeting of the stockholders of the Cincinnati, Hamilton and Dayton Railroad Co., was held in Cincinnati on the 7th inst., for the purpose of ratifying a contract previously entered into between the two companies for an entrance into Cincinnati of the Atlantic and Great Western, by means of a third rail, over the track of the Cincinnati, Hamilton and Dayton Railroad. The provisions of the contract, which was approved by the stockholders, is in substance as follows:

The Cincinnati, Hamilton and Dayton Railroad Company agree to lay a six feet track from Dayton to Cincinnati, and have it completed by the time the Atlantic and Great Western Railway reaches Dayton; and that when the business of the broad gauge requires to be worked separate from the narrow gauge, to lay a six feet track outside of the narrow gauge. A standing committee shall determine what portions of said track between Cincinnati and Dayton shall be changed to a separate track. The Presidents of the Cincinnati, Hamilton and Dayton and Little Miami Railroads, with the chief engineer of the Atlantic and Great Western Railway to be an advisory committee, to whom all matters in dispute shall be referred for adjustment. The Atlantic and Great Western Railway Company are to furnish the freight and passenger cars, and the Cincinnati, Hamilton and Dayton Railroad Company the locomotives to do the business between Cincinnati and Dayton; and the latter company agree to be prepared at all times to receive and forward all passenger cars from and to the Ohio and Mississippi Railroad, so that there shall be no break of connection or delivery. The control of rates between Cincinnati and competing points is placed under the direction and supervision of the advisory committee, it being understood and agreed between the parties respectively that all the all rail traffic of the Ohio and Mississippi Railroad Company, the direction of which is controlled by the second party, and all the all rail traffic of the second party the direction of which is controlled by it, destined to New York City and Boston, together with all the all rail traffic of the second party, the direction of which is controlled by it, destined to points east of the city of New York, with which the Erie Railway Company and the Sunbury and Erie Railroad Co. have railroad traffic connections, shall be sent to, and the second party covenants to deliver the same at Dayton, to the first party, for transportation over its line. And it is further understood and agreed that the railroad traffic of the first party, the direction of which is controlled by it, destined to Cincinnati, Indianapolis, St. Louis and Louisville, and to points south and west of said cities, shall be sent to, and the first party contract to deliver the same at Dayton, to the second party, for transportation over the broad gauge line of the second party.

As will be seen by the following circular, the cost of the third rail is estimated at $750,000, which is to be provided for by an issue of $344,200 additional stock, and the sale of the remaining $300,000 of second mortgage bonds, to be distributed *pro rata* among the stockholders. Fractional shares of stocks or bonds to be covered by certificates, redeemable in bonds or certificates of stock on the presentation of a sufficient amount of such certificates:

OFFICE OF THE CINCINNATI, HAMILTON AND DAYTON RAILROAD COMPANY.
CINCINNATI, Oct. 7, 1863.

The Board of Directors (sanctioned by a vote of stockholders at a meeting held this day) approved a contract with the Atlantic and Great Western Railway Company, by which this Company agree to lay down a track of the six feet gauge between Cincinnati and Dayton, for the business of the Atlantic and Great Western Railway. This improvement is estimated to cost $750,000.

The Board of Directors, sanctioned by the stockholders, have determined to issue the $344,200 of additional stock, thus completing the amount authorized by the charter of $2,500,000. They are also authorized to dispose of the remaining 300 of the 1,250 $1000 seven per cent bonds provided for under the second mortgage which bonds were executed October 15, 1853; but not disposed of heretofore. These two amounts, together with a portion of the surplus earnings on hand, are estimated to be sufficient to cover the expenditure for making the proposed improvement.

The stock and bonds will be sold to the present stockholders *at par*, in proportion to the amount of stock held by them in this company at the time of closing the transfer books, October 1, 1863

Stockholders whose stock is registered on the books of the Company, in Cincinnati, desirous of taking their proportion of stock and bonds, will notify F. H. Short, Secretary of the Company on or before Tuesday, the 20th inst. Such stockholders as have their stock registered on the books of the Company, in New York, and who are desirous of taking their proportion of stock and bonds, will notify E. R. Bebb, Esq., No. 7 Barclay street, New York, on or before the 20th inst.

The stock and bonds will be ready for delivery in Cincinnati and New York, to those who have given notice of their desire to receive them on the 26th inst. Stockholders, whose stock is registered in New York, will call, as above named, on E. R. Bebb, Esq.

The portion of the stock and bonds of those who may neglect or decline to give notice of their intention to receive them, will be offered *pro rata* at par to such stockholders as have given the notice.

In cases where the stockholders do not hold sufficient stock to entitle them to a share of stock or bond, certificates will be issued, redeemable with stock or bonds, as the case may be, on the presentation of a sufficient amount of such certificates.

Stockholders who accept this proposition are required to take both stock and bonds. They can not be taken separately.

By order of the Board of Directors.

S. S. L'Hommedieu, *Pres't.*

F. H. Short, *Sec'y.*

"This arrangement," says the Cincinnati *Railroad Record*, "settles the question of a new railway route eastward, and the most important one yet opened between this city and New York. By this route the expense of reshipping at intermediate points will be avoided, as we understand it is the intention of the managers of the G. W. to run their cars direct to Jersey City. By this arrangement the Ohio and Mississippi, in which the city has a large interest, will be enabled to compete successfully with all other routes for the through business of St. Louis and the Southwest, for they can load their cars on the banks of the Mississippi and deliver them, without breaking bulk on the Hudson at Jersey City."

Artesian Wells.--Their Character and Usefulness.--Rock or Petroleum Oil.

The supplies which are necessary to man's existence surround him on every side. From the surface he gathers the cereals; from the heavens light shines, and water distils upon his fields; while by the application of scientific skill, the earth yields up from its dark depths below, metals, coals and oils, each in its appropriate place to minister to his comfort. He thus stands at a central point and fills his commiserat from the skies above him, from the fields around him, and the earth beneath him. And every year he spends in intelligent and peaceful industry develops new wealth in the earth, and a new capacity for producing wealth, which is of lasting benefit to himself and to his children.

Among the contrivances of human ingenuity the invention of Artesian Wells will always hold a prominent place. Not only because of their intrinsic value as instruments of usefulness, but because they evidence the truthfulness of scientific or geological investigations; and because they make available the vast stores of natural wealth, which otherwise would remain without the reach of human acquisition.

An Artesian Well is a cylindrical perforation bored vertically down through one or more of the strata of the Earth, till it passes into a porous gravel bed containing water or other liquid, placed under such incumbent pressure as to make the fluid rise through the perforation, either to the surface or to a height convenient for the operation of a pump. They have been used for a long time in the East and in Italy. They derive their name from Artois, one of the provinces of France, where the practice of employing them was revived.

Artesian Wells are supposed to be fed by the infiltration of the waters condensed in rain, dew, snow, etc., upon the surface of the Globe. The waters are diffused after condensation upon the surface of the soil, and percolate downwards through the various pores and fissures of the geological strata, to be again united in subterranean veins, rills, streamlets, or expanded films of greater or less magnitude or regularity. The beds traversed by numerous disjunctions will give occasion to numerous interior currents in all directions, which cannot be recovered and brought to day; but when the ground is composed of strata of sand, or gravel very permeable to water, separated by other strata nearly impervious to it, reservoirs are formed to our hand, from which an abundant supply of water may be spontaneously raised. In this case, as soon as the upper stratum is perforated, the waters may rise, in consequence of the hydrostatic pressure upon the level strata, and even overflow the surface in a constant stream, provided the level from which they proceed be proportionately high.

A remarkable example of an Artesian well is that at the *abattoir* at Grenelle, a suburb at the southwest of Paris, where there was a great want of water. It cost eight years of difficult labor to perforate. The geological strata round the French capital are all of the tertiary class. The surface consists of gravel, pebbles and fragments of rock, which have been deposited by the waters at some period anterior to any historical record. Below this layer of debris, it was known to the engineer that marl and clay would be found. Underneath the marl and clay, the boring rods had to perforate pure gravel, plastic clay and finally chalk. No calculation from geological data could determine the thickness of this stratum of chalk, which from its powers of resistance, might present an almost insuperable obstacle. The experience acquired in boring the wells of Elbeuf, Rouen, and Tours was in this respect but a very imperfect guide. But supposing this obstacle to be overcome, was the engineer sure of finding a supply of water below this mass of chalk. In the first place, the strata below the chalk possessed all the necessary conditions for producing Artesian springs, namely successive layers of clay and gravel, or of pervious and impervious beds. M. Arago had shown that the water of the spring here would necessarily rise to the surface, because in the well at Elbeuf, which is nearly 9 yards above the level of the sea, the water rises from 27 to 29 yards above the surface of the earth, and consequently, from 36 to 38 yards above the ocean level. Now as the orifice of the bore at Grenelle is only 34 yards above the same level, it followed that, if the identical water bed was met with, the water would rise above the earth's surface at Grenelle.

At length, in February, 1841, after eight years' labor, the rods suddenly descended several yards, having pierced into the subterranean vault. The water rose to the surface and discharged itself at the rate of 881,884 gallons inevery twenty-four hours. At first, it brought up so great a quantity of sand that the tube was several times choked up by it, and even now it is not free from occasional though rare interruptions, but the force of the column of water has always proved sufficient to clear its way after a short interval. The bore traversed through 33 feet of drift sand and gravel, 115 feet of the lower tertiary strata, 1,394 feet of chalk and 256 feet of calcareous sandstone and clay; ending in a bed of green colored sand; in all 1,798 feet. The water flows in a clear continuous stream, and is carried by pipes to a reservoir near the Pantheon, whence it is distributed over the adjacent parts of the city, as well as along the line of the Boulevards from the *abattoir* to the Observatory. By means of small pipes also the Ecole Militaire, the Hotel des Invalides, and several other public establishments, are supplied with water.

Artesian wells have been brought into successful use in a number of instances in this country. They have been successful in Alabama, South Carolina, New York and Missouri. Several have been sunk on the island of Manhattan. One of these, the oldest and the deepest, was sunk at the United States Hotel, between Pearl and Water sts., the Hotel at that time being known as Holt's Hotel. The first 126 feet of penetration was in stratified sands and blue clay alternating with river mud. At this depth the surface of the rock was struck under a bed of coarse gravel; and below this the shaft was continued in the gneiss rock five hundred feet further. For a time the water was tolerably good, but it soon become impregnated with the salt river water, and thus was rendered unfit for use.

The deepest well in this country was made for a sugar refinery at St. Louis by the Messrs. Belcher. It was commenced in 1849, three hundred feet from the river, and four hundred and twenty feet above the level of the sea. The boring was commenced from the bottom of a well 30 feet deep, and continued by hand power through 219 feet of calcareous strata, the diameter of the bore being 9 inches. Subsequently steam power was applied. At the depth of 457 feet the bore was contracted to 3½ inches. In 1852 the workmen stopped to enlarge the bore of the first 80 feet to 16 inches. The bore was then enlarged to 5½ inches from depth of 457 feet to 1,050 feet, and a four inch tube put in to hold up the shales of the last 150 feet. The sinking was then continued with a 3½ inch bore until March, 1854, when the depth of 2,199 feet was reached, and the work ended in silicious and clay beds belonging to the lower silurian formation. The whole time actually spent upon the work was 33 months, at a cost of $10,000. The water was found to be unfit for anything but medicinal purposes, having a strong odor of sulphuretted hydrogen.

In 1848 a well was sunk at Charleston, South Carolina, 1,250 feet deep. The bore was three inches in diameter, and water was discharged ten feet above the surface at the rate of 1,200 gallons per hour.

The temperature of water issuing from Artesian wells increases with the depth, but at different rates at different places. At Paris where the mean temperature at the surface is 51° Fahren-

heit, the water at the depth of 1,797 feet in the well at Grenelle is 82° Fahrenheit. This is equal to an increase of 1° F. for every fifty-eight feet in depth. At St. Louis the increase is equal to 1° F. for every 83 feet of descent. At Charleston the mean temperature at the surface is 68° F., at a depth of 500 feet it is 73°, at 1,000 feet it is 84°, and at 1,106 feet it is 88° Fahrenheit. This is an increase of 1° Fahrenheit for every 52½ feet. It is thus evident that hot springs are merely natural Artesian wells. At Wurtemberg large factories are warmed by water from Artesian wells.

The readiness with which old instruments are turned to the accomplishment of new purposes and to the development of new resources is seen in the application of Artesian wells to the Oil Creek regions in Pennsylvania. By this means Petroleum or Rock Oil has now become a common article of commerce. The region of Northwestern Pennsylvania yields up its oleaginous wealth; giving to us, for the mere cost of transportation, one of the most valuable articles of merchandise.

As late as 1854 work was first commenced in this region. Wells were subsequently sunk, on the same principle as Artesian wells, and the oil liberated from the dark reservoirs, in the rocks below, boiled up in fountains at the feet of the operators. In the year 1860, just six years after the work had been commenced, there had been 2,000 wells sunk; and 74 of these yielded, on an average, 1,165 barrels of oil per day. The barrels hold 40 gallons each, hence there were 46,600 gallons produced per day.

Thus science reduced to practice by the hand of art, makes possible, as well as increases the conveniencies of life, while at the same time it is continually elucidating new truth, pertaining to the physical world, and to our individual existence.

Cumberland Coal and Iron Company.

The long and vigorously contested suit between this and the Hoffman Coal Company has been finally decided in favor of the Cumberland Co. The effect is to rehabilitate it with a very valuable property which was as alledged fraudulently taken from it. The following is a report of the decision of the Maryland Court of Appeals:

COURT OF APPEALS OF MARYLAND—JUNE TERM, 1863.

Cumberland Coal and Iron Company agt. *Allen M. Sherman, Wm. B. Dean and the Hoffman Steam Coal Company, of Alleghany County.*—This cause, standing ready for hearing, was argued by solicitors of the respective parties and submitted, and the proceedings have since been read and considered. Whereupon it is this 9th day of October, in the year, 1863, by the Court of Appeals of Maryland, and by the authority thereof, ordered, adjudged and decreed, that the decree of the Circuit Court of Alleghany county, sitting as a Court of Equity, passed on the 12th day of November, in the year 1861, from which the appeal in this cause was taken, be, and the same is hereby, reversed, and the cause is hereby remanded to the said Circuit Court, in order that an account may be stated by the Auditor of said Court, between the appellant and the appellees, from the evidence in the cause and such other and further evidence as may be produced before him; the appellees to be charged with all moneys received by Allen M. Sherman and Wm. B. Dean and the Hoffman Steam Coal Company of Alleghany county, or either of them, to the use of the appellants, or from stocks of the appellants sold or pledged by the appellees, or either of them, or from the net rents, issues and profits of the lands and tenements, coal mines and other property of said appellants, held, used, occupied or enjoyed by the appellees, or either of them, by virtue of the deeds of conveyance and contract of transportation referred to in the bill and proceedings, and credited with all sums paid by them to the appellants on account of the said stocks, lands and tenements, coal mines and other property, or expended in permanent improvements; and (if) upon such accounting the appellants shall be found indebted to the appellees, then, upon payment of said indebtedness, or legal tender thereof, or if nothing be found due, the appellees shall be decree to reconvey and assign to the said appellants all the lands, tenements and hereditaments mentioned and described in the said deeds or conveyances executed in the name and on behalf of the appellants to the appellees, Allen M. Sherman and William B. Dean, and by the said Allen M. Sherman and William B. Dean to the Hoffman Steam Coal Company, and to deliver up to be cancelled the aforesaid contract of transportation, and assign, transfer and make over to the appellants all the shares of stock held by the appellants all the shares of stock held by the appellees, Allen M. Sherman and William B. Dean or the Hoffman Steam Coal Company in said company, and all the rights or interests in the said stock or said company, which the appellees, or either of them, have acquired as the consideration in whole or in part of the aforesaid lands.

The injunction heretofore issued in this cause is hereby revised, the costs incurred in this Court and in the Court below by the appellants to be paid by the appellees.

True copy test—GEO. EARLE, Clerk Court of Appeals, Maryland.

English Railway Passengers' Assurance Co.

During the half-year ended on the 30th June last, the premiums on general accident policies amounted to £28,742 15s. 5d., and on railway accident tickets to £2,913 10s. 1d., making the total premium income for the half-year £31,656 5s. 6d., against £28,554 6s. 6d. during the same period in 1862. The comparative number of policies and tickets issued during each half-year was as follows: General accident policies:—1862, £11,520; 1863, new policies, £2,713; renewals, £9,876; total, £12,589. Policies for terms of years, or for life by single payments, and by annual payments on a decreasing scale:—1862, 388; 1863, new policies 20, renewals 342, together 362. Single journey tickets:—1862—1st class, 23,094; 2nd class, 43,681; 3rd class, 67,710. 1863—1st class, 22,432; 2nd class, 42,774; 3rd class, 72,583. Double journey tickets:—1862—1st class, 11,603; 2nd class, 19,088; 3rd class, 18,859. 1863—1st class, 12,449; 2nd class, 23,266; 3rd class, 26,003. Periodical tickets:—1862—1,080. 1863—1,059. While some descriptions of tickets showed a slight falling off, and the increase of policies had not been at quite so rapid a rate as hitherto, the aggregate amount showed a satisfactory increase, and that the business of the company still continues to progress. The cash received for premiums during the half-year was £28,311 17s. 9d., and the interest on investments £405 3s. 10d., making with the balance from the previous half-year £45,551 2s. 2d. to the credit of the revenue account. The disbursments for compensation were £16,629 0s. 3d., for office expenses, salaries, etc., £5,798 18s. 8d., and for commission and government duty, £3,824 15s. 7d. After payment of interest to the proprietors, and £1,000 paid towards the replacement of capital, there is a balance of £17,935 17s. 1d. to be carried forward. Adding to this the sums due from clearing house and agents, £3,344 7s. 9d., there was a total balance on revenue account of £21,280 4s. 10d., from which interest at the rate of 4 per cent. per annum would be paid for the half-year. The amounts paid as compensation during the half-year were for—8 fatal cases, £5,050; 879 claims for personal injury, £11,579 9s. 3d.; total, £16,629 0s. 3d.

Pittsburg, Maysville and Cincinnati R. R.

An effort is about being made to revive the Pittsburg, Maysville and Cincinnati Railroad project. The work heretofore done on this road has been entirely confined to the section east of the Muskingum, and has been accomplished entirely with local means. A correspondent furnishes us with the following particulars of this enterprise

"The line east of the Muskingum starts at McConnelsville, follows the waters of Meigs Creek, Will's Creek, Stillwater and Short Creek, having on its line a great number of villages, to-wit Rockdale, Littlesburg, Zeno, Cumberland, Point Pleasant, Hartford, Senecaville (intersecting the Central Ohio Railroad at Campbell's), Washington, Winchester, Antrim, Londonderry, Freeport, Smyrna, Georgetown, Mt. Athens, Mt. Pleasant, and Warrenton, the Ohio river and line of the Cleveland and Pittsburg Railroad.

The company have procured the right of way for sixty miles of their line east of McConnelsville, and have expended over $400,000 in construction of this part of their line. The most of the heavy sections are nearly finished, whole sections are entirely graded in places and east of Cumberland a continuous line of twenty miles, including much heavy work, is ready for the ties and rail. This part of the line intersects the Central Ohio Railroad, affording immediate railroad facilities to the citizens as soon as the iron is on the road. The P., M. & C. has thus far been prosecuted with local means. We understand that the stockholders and citizens will soon make another effort to iron the road, and set the iron horse to work.

The work of construction thus far is among the cheapest in Ohio, the funds having been supplied by the local citizens and expended under their immediate observation, were most economically expended. For the same reason the agents of the stockholders suspended the work when their funds were exhausted without embarrassing the company with debts and liens. The company is in good condition to recommence their work, now that money is plenty. It is hoped their road will grow into such importance, that, some day, capitalists will give a helping hand and carry the work to final completion."

This road, when completed, will give us another route to the coal fields of Ohio; but unless it is used more extensively for the transportation of coal than other roads now built, it will afford but small facilities in supplying the wants of our citizens in that particular. Nevertheless we wish the enterprise all success.—*Railroad Record.*

Victoria (London) Dock Company.

During the half year ending the 30th June last, 1,417 ships, measuring 503,775 tons, entered the Victoria Docks, showing a decrease of 130 ships, and 48,489 tons, as compared with the same period in 1862. This falling off was accounted for in the decrease in colliers and coasters, amounting to 171 vessels, measuring 68,014 tons. The following is a comparative statement of the vessels and their tonnage which entered the undermentioned docks in the years ending 30th June, 1862 and 1863, respectively:—Victoria, 1862, ships 2,779, tonnage 1,067,207; 1863, ships, 2,678 tonnage 1,069,003. London, for years ending 31st May, 1862 and 1863, (loaded from foreign ports,) 1862, ships 1,017, tonnage 481,285; 1863, ships 1,120 tonnage 518,530; and St. Catharine, 1862, ships 123, tonnage 207,749; 1863, ships 942, tonnage 241,402. The total number of ships, and their aggregate register tonnage, that entered the port of London with cargoes from foreign ports during the years ending 30th June, 1862 and 1863 respectively was—1862, 10,723 ships; 3,188,049 tonnage. 1863, 11,977 ships; 3,473,300 tonnage. Increase in ships, 1,254; increase in tonnage, 285,251.

Apportionment of Passengers in Gt. Britain.

On the railways of England and Wales the proportion of passengers conveyed last year was 12.71 first class, 30.50 second, and 56.79 third class, as compared with 12.39 first class, 31.11 second class, and 56.50 third class in 1861. There was, therefore, a small decrease in the relative numbers of second class passengers in 1862. Upon the Scotch lines 13.40 per cent. of the passengers traveled first class in 1862, 11.09 second class, and 75.51 third class, as compared with 13.77 per cent. first class, 11.91 second class, and 74.33 third class in 1861. The Scotch would seem, therefore, to be taking more and more to their favorite third class. On the contrary, the proportions last year of Irish passengers was 12.23 per cent. first class, 32.86 second class, and 53.91 third class, against 13.93 per cent. first class, 34.98 second class, and 51.09 third class in 1861. The average proportions for the United Kingdom last year were 12.80 per cent. first class, 28.75 second, and 58.45 third class, against 12.62 per cent. first class, 29.44 second, and 57.94 third class in 1861.

Grape, Canister, Shrapnel and Shell.

Grape consists of nine shot arranged in three layers, which vary in size according to the calibre of the gun; they are held together by two plates of about one-fourteenth of an inch less diameter than the calibre of the gun, two rings, a bolt and a nut. The canvas bag arrangement is too old for this war; it is not so simple or durable, and has not been used for years. Canister for a gun contains twenty-seven small cast-iron balls, arranged in four layers, the top of six, the remainder of seven each for a howitzer it contains forty-eight small iron balls in four layers of twelve each; for the same calibre you will see that the balls for canister is a tin cylinder, closed at the bottom by a thick cast-iron plate or a wooden sabot, and at the top by a sheet iron plate with a handle attached; the interstices between the balls are closely packed with sawdust to prevent crowding when the piece is fired. Shrapnel consists of a very thin shell, which is filled with musket balls; the interstices are then filled by pouring in melted sulphur; a hole is then bored through the mass of sulphur and bullets to receive the bursting charge. Now to explain the difference between a "shrapnel" of "spherical case" and a "shell." The destructive force of a shrapnel is what it receives from the charge in the gun, the powder in the shrapnel being only to break the envelope and spread the balls, they still moving forward by force of the impulse they received from the charge in the gun. A shell is made very much thicker than the envelope of a shrapnel, and is nearly filled with powder, and will do great execution if it explodes on the ground, it having destructive qualities in itself, aside from the discharge of the gun. A shrapnel shell has only half of the charge of powder that a shell proper has; thus a twenty-four pounder shrapnel contains 175 musket balls and six ounces of powder. A twenty-four pounder shell has twelve ounces of powder. A six pounder shrapnel has thirty-nine musket balls and twenty-five ounces of powder.

The Oswego and Rome Railroad.

Laborers for this road arrive at this city in considerable numbers on the various steamers, many of them from Canada, and go hence to the different places assigned them along the route. The Pulaski *Democrat* gives the following in regard to the progress of the work in that neighborhood: "The work on the railroad has fairly commenced at Richland Station, and preparations are being made to build the bridge across the river. Numerous shanties are being erected between here and the station, and we understand that 200 laborers were expected here this week. The contractors advertise for 1,000 hands, having agreed to complete the road in about one year. The station will be at or near "McCarty's Corners," and the road will cross the river about a mile and a half above the village."—*Oswego Times.*

Redemption of Illinois Bonds.

The Governor of the State of Illinois has issued a proclamation of his intention, in accordance with the provisions of an act of the Legislature, approved February 22, 1859, to pay off on the 15th of November next, the principal and interest on a portion of its bonds at the American Exchange Bank, N. Y. Those to be thus paid off are noted in his proclamation as follows:

Bonds issued under the provisions of the above recited act, being refunded stock coupon bonds of one thousand dollars each, dated July 1, 1859, due or payable 1860, bonds Nos. 1, 2, 3, 4, 5, 7, issued to Hall Wilson, attorney; No. 9, issued to W. A. S. Van Duzer; Nos. 10, 11, 12, 13, issued to Jesse K. Dubois, Auditor; Nos. 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, issued to J. Bunn, Attorney; Nos. 28, 29, 30, 31, 32, 33, 34, 35, issued to Jesse K. Dubois, Auditor; Nos. 36, 37, 38, issued to Ketchum, Son & Co.; Nos. 39, 40, 41, 42, 43, issued to W. H. Marston; Nos. 44, 45, 46, 47, 48, 49, 50, issued to H. Corwith; No. 51, issued to Jesse K. Dubois, Attorney; No. 52, issued to J. Bunn, Attorney; Nos. 53, 54, 55, issued to Jesse K. Dubois, Attorney; Nos. 56, 57, 58, 59, 60, 61, 62, 63, 64, 65, 66, 67, 68, 69, 70, 71, issued to E. F. Leonard, Attorney.

Grand Trunk Railway of Canada.

It will be remembered that the creditors of the Grand Trunk Company were to have received £1,500,000 sterling of 5 per cent Province bonds as the capitalised value of the postal and military subsidy for 25 or 30 years. (See second report of the select committee, page 27.) The creditors were to have had 10s in the pound; by means of this £1,500,000, and the rest of their debts were to have been paid in 4th preference stock. Five per cent on £1,500,000 is £75,000 a year. The postal is by far the greater part of the postal and and military service—the military is a very small matter. We need not repeat the history of how the £1,500,000 Province bonds measure was sent to the wall—how promises deliberately made have never been kept. Up to the present moment the last performance of the Canadian authorities has been an order in Council fixing the postal rate at 100 dollars per mile per annum. Of course the Company protests against this miserable "pay" for the costly and important service they have to perform for the country. $100 per mile per annum on 1,000 miles, is less than £25,000 per annum, or less than a third of the figures originally fixed on. The English Company have made for Canada a grand trunk railway, at an amount of loss it is fearful to contemplate. With this, however, the Canadians do not appear satisfied. They want the Company in addition to carry their mails at a loss! In this state of things when the postal question will be settled it is impossible to say.—*Herapath's Journal.*

☞ The *Rochester Union* says that, "in consequence of the pressure of traffic, the New York Central Company have probably concluded their negotiations for an amalgamation with the Harlem Road, and will have a New York connection that way. It will, of course, retain the Hudson River Road as a tributary, for that road has no other outlet. The Central Company is building 400 or more freight cars of what is known as the 'compromise gauge,' to be run to Cincinnati over the Ohio roads, to enable freight to be taken to New York without transhipment. This movement for Cincinnati freight is an offset to that of the Erie Company, which, by its connection with the Atlantic and Great Western, will run through cars both to Cincinnati and St. Louis."

Railroad Earnings--Weekly.

The traffic of the Great Western Railroad for the week ending Oct. 2, 1863, was as follows:

Passengers	$25,960 23
Freight and live stock	34,986 01
Mails and sundries	1,408 39
Total	$62,354 63
Corresponding week of 1862	62,218 39
Increase	$136 24

The earnings of the Grand Trunk Railway for the week ending September 20, 1863, were:

Passengers	$42,671 11
Freight and live stock	55,577 25
Mails and sundries	2,800 00
Total	$101,048 36
Corresponding week, 1862	91,644 31
Increase	$9,404 05

The earnings of the Galena and Chicago Union Railroad for the 1st week of Oct., 1863, were:

Freight	$51,219 23
Passengers	13,416 72
Mails	1,300 00
Total	$65,935 95
Same week, 1862	44,761 36
Increase	$21,174 59

The earnings of the Chicago and Alton Railroad for the 1st week of October, 1863, were:

Passengers	$15,093 20
Freight	22,329 45
Sundries	1,734 23
Total	$39,157 58
Same week last year	29,118 35
Increase	$10,039 23

The earnings of the Toledo and Wabash Railroad Company for the 1st week of October, 1863, were $30,978 75
Same week, 1862 37,323 14
Decrease $6,344 39

The earnings of the Chicago and Northwestern Railway for the 1st week in October, 1863, were $41,439 08
Do., 1862 22,447 55
Increase $18,991 53

The earnings of the Michigan Central Railroad for the 1st week of Oct., 1863, were $71,222 00
Same period, 1862 67,073 00
Increase $4,149 00

The earnings of the Chicago and Rock Island Railroad for the 1st week of October, 1863, were $57,381 00
Do., 1862 35,218 00
Increase $22,163 00

The earnings of the Michigan Southern and Northern Indiana Railroad for the 1st week of Oct., 1863, were $74,140 00
Do., 1862 64,689 00
Increase $9,451 00

The earnings of the Cleveland and Toledo Railroad for the 1st week of October, 1863, were $30,272 00
Same week, 1862 24,982 00
Increase $5,290 00

The earnings of the Milwaukee and Prairie du Chien Railroad for the 4th week in Sept. have been $59,081 39
Same week, 1862 36,130 21
Increase $22,951 18

RAILROAD EARNINGS—MONTHLY.

	January.	February.	March.	April.	May.	June.	July.	August.	September.	October.	November.	December	Total.
